Notes of Current Interest

New Year's message of Minister of Labour

In a New Year's greeting to the citizens of Canada, Hon. Humphrey Mitchell, Minister of Labour said: "It is my pleasant duty and privilege to extend at this festive season the appreciation of the Department of Labour of Canada to all the citizens of Canada whether employer or employee.

"It is with deep thankfulness that I can do this, at a time free from the trials and sacrifices of war, yet so vivid in the minds of all of us; and at a time too, when we as a nation stand upon the threshold of what I firmly believe will be the era of our greatest development.

"We have learned many things in the past several years. We have learned that teamwork, nationally and internationally, was the prime requisite for victory. It is with this thought in mind that I would urge the two partners—management and labour—to retain the lesson learned and apply it to peaceful, adept and rapid development. There can be no greater disaster befall us now than disharmony in the ranks of the workers and inability on the part of employer and employee to work together to achieve mutual benefit. To aid in preventing this, the Government has provided carefully selected machinery which both labour and management can use when they find it difficult to arrive at local understanding of those objects which it might be the desire of either party to secure at any given time. We must, as good citizens, realize that enterprise on the part of the employer

cannot be allowed to become exploitation; neither can the aspirations of labour be allowed to become a weapon to obtain power inimical to the well-being of all.

"I am confident that with the advent of the New Year, there will be a clearer perception of that which lies ahead, if we are to obtain the best in the coming year. You may be assured that this Department will be striving in every possible way to help secure those benefits we so much desire.

"I wish again to convey many thanks to all those citizens who have so loyally assisted us in the past year and to express my sincere hope that the New Year will bring much happiness."

New Year's messages of labour leaders

Canadian labour leaders in their New Year's messages sketched in outline labour's peacetime ideals and objectives.

Mr. Percy R. Bengough, President of the Trades and Labour Congress of Canada, declared that "the war years have conclusively demonstrated that there are no problems of production in Canada . . . Canada is a country in which all citizens able to work can have full employment with a standard of living allowing for good and comfortable homes and happy lives with efficient treatment for sickness and full protection for the aged." He urged the enactment of legislation to establish jobs and security for Canadians in peacetime, "with the same ingenuity and dispatch used to successfully prosecute the war."

He stressed the "urgent need of immediately commencing public welfare works of sufficient proportions to re-establish the returning personnel from the armed services, and those formerly in the production army, in gainful employment."

Mr. A. R. Mosher, President, Canadian Congress of Labour expressed his confidence in the future of Canada. "We believe," he said, "that of all the countries in the world, Canada has the greatest room for development and the greatest possibilities of per capita production." He declared that Canada has room for a much larger population and that the country has emerged from the war "vastly richer than ever before in machinery of production, in skilled manpower, and in knowledge of manufacturing techniques." He urged that nothing be allowed to stand in the way of the highest human happiness and well-being. "If there are prejudices, interests, traditions, customs, policies of any kind or nature whatsoever which prevent us from attaining the utmost economic and social welfare, they must be ruthlessly discarded," he maintained.

"The year 1946," he affirmed, "may well be known in Canada as the year in which a start was made in the war against poverty, ill-will and selfishness, against human misery and distress in every form, against all the evils which have beset humanity from the beginning of time."

Mr. Alfred Charpentier, President of the Canadian and Catholic Confederation of Labour, declared that with the conclusion of the military conflict the world is entering a conflict of ideas and ideals. He made a plea for a spirit of union and a Christian philosophy as the most effective instruments in bringing about social and moral regeneration. This, he held, was essential to economic progress. He declared that organized workers particularly had grave responsibilities in the matter of education, in labour-management agreements and as citizens.

Enforcement of Reinstatement in Civil Employment Act

Commenting upon a recent conviction registered in a Winnipeg police court under the Reinstatement in Civil Employment Act, Arthur MacNamara, Deputy Minister of Labour, stated on December 31 that this follows from the first prosecution found necessary where an employer had failed to reinstate an ex-member of the Armed Services in his former employment.

"The fact that this is the first prosecution under this Act," he declared, "speaks volumes for the admirable manner in which Canadian employers have complied with the law. Tens of thousands of men and women have been

given back their old jobs under the conditions set forth in the statute, and when at this late date one can say that only a single prosecution has been found necessary, it is needless to say more to indicate how well employers have observed both the spirit and the letter of the Act."

Employment and industrial statistics

The main statistics indicative of trends in industrial activity in Canada during the last quarter of 1945 are given in the table on page 3 together with comparable data for 1944. As shown in this table, the index of industrial employment published by the Dominion Bureau of Statistics has risen slightly, being 171.1 at the beginning of November, thus reversing the downward trend in employment evident since the beginning of the year. A fractional increase in the monthly index of wholesale prices was accompanied by a slight advance in the Bureau's cost-of-living index which registered 120.1 points at December 1. On the other hand, the index of the physical volume of business declined 4.6 points to stand at 189.9 for November. Although most of the components of this index indicated a lowered volume of production, the distribution index advanced 13.0 points during the month.

Employment and earnings.—An upward trend was evident in industrial employment at the beginning of November when the unadjusted index stood at 171.1, compared with 168.7 at October 1. This is only the second monthly advance recorded during 1945 as the trend, except at July 1, has been downward since the beginning of the year. An expansion in employment during October is contra-seasonal according to pre-war experience, although annual increases have been recorded at November 1 since 1939. Corresponding indexes of industrial employment at November 1 during the war years were as follows: 1944, 183.8; 1943, 188.7; 1942, 183.3; 1941, 167.6; 1940, 139.2; 1939, 123.6.

The advance in the employment index at November 1 from the month previous was due to an improvement in the non-manufacturing industries, particularly logging where 21,700 men had been taken on. Mining, communications, transportation, construction, and trade also reported an expanded personnel. These advances were offset by further curtailment in manufacturing, mainly in iron and steel and vegetable food factories, from which 8,743 and 6,741 workers respectively were released during the month. There were also decreases in non-ferrous metals, chemicals, and lumber.

The 15,562 establishments reporting showed a total working force of 1,750,215 at Novem-

STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

NOTE.—Official statistics except where noted. Much of the statistical data in this table, with an analysis, are included in the *Monthly Review of Business Statistics* issued by the Dominion Bureau of Statistics.

³ Base June, 1941=100.

⁴ Base 1935-1939=100.

⁵ Adjusted, where

necessary, for seasonal variation. ⁶ Notes in the hands of the public at the end of the month.

⁷ Figures for four weeks

ended December 29, 1945, and corresponding previous periods.

ber 1, 25,340 more than at October 1. This increase, amounting to 1.5 per cent, was accompanied by a rise of 1.1 per cent in the weekly salaries and wages disbursed at November 1, when the payrolls of these establishments totalled \$55,951,915. The per capita weekly earnings dropped from \$32.08 at October 1 to \$31.97 at November 1. Weekly earnings at November 1, averaged \$32.29 in 1944, \$31.60 in 1943, and \$29.81 in 1942.

Prices.—A slight rise was indicated in the general index of wholesale prices which, on the base 1926=100, increased to 103.1 in November from 102.9 in the preceding month and 102.4 in November, 1944. In the sub-groups, there were slight increases in vegetable products, animal products, and non-metallic minerals, while other groups, comprising textile products, wood products, iron products, non-ferrous metals and chemical products, remained unchanged.

The Dominion Bureau of Statistics cost-of-living index again registered a fractional advance from 119.9 at November 1 to 120.1 at December 1, 1945. Slight increases in the indexes for foods, fuel and light, and home furnishings and services accounted for the rise. The food index rose from 134.0 to 134.3 as citrus fruits, fresh vegetables and butter recorded moderate advances. Fuel and light increased from 106.6 to 107.1, and home furnishings and services from 119.4 to 119.5. Other budget group indexes remained unchanged from November 1, rentals standing at 112.3, clothing at 122.5 and miscellaneous items at 109.6. The December, 1945, index of 120.1 compares with 115.8 at December 1, 1941, when maximum price regulations went into effect. The wartime increase in the cost-of-living index was 19.1 per cent.

Index of the Physical Volume of Business.—

The index of the physical volume of business declined 4.6 points from 194.5 in October to 189.9 in November. The volume of productive operations was considerably lower at this date than in November, 1944, when the index stood at 227.9. Lowered volume was indicated in mineral production, manufacturing, and electric power production. There was, however, a marked increase in activity in the construction industry, as measured by the value of contracts awarded, and the index of construction rose sharply from 142.2 in October to 201.2 in November. Factors indicating the trend of commodity distribution recorded considerably increased volume, with the combined index of distribution advancing from 160.7 in October to 173.7 in November.

For the first ten months of 1945 the index of the physical volume of business averaged 9.0 per cent lower than for the corresponding period in 1944. In the same comparison, the

index of industrial production was 12.6 per cent lower, mineral production 29.6 per cent, manufacturing 12.6 per cent, and the consumption of firm power 9.3 per cent lower. The value of imports was 11.3 per cent lower and that of exports 3.7 per cent. Hog slaughterings were also down by 34.5 per cent but cattle slaughterings increased by 28.3 per cent. Factory cheese production increased 3.9 per cent at the expense of butter production, where a slight decline was registered. There was a considerable increase (29.9 per cent) in the value of construction contracts awarded during the ten-month period under review.

Employers urged to expand working force

In a letter dated December 20, 1945, the Honourable Humphrey Mitchell, Minister of Labour, and the Honourable C. D. Howe, Minister of Reconstruction and Supply, urged employers to take advantage of the present manpower situation to expand their working force.

The letter pointed out that "for the first time in over three years there is sufficient labour available to meet all reasonable demands.

"It is not anticipated," the letter continued, "that this situation will continue for long, as increased industrial and construction programs will be operating in the spring.

"The present situation offers an opportunity to employers. Those who have been in lower labour priorities throughout the war can now obtain additional help. Those who can immediately expand their working force can now obtain adequate help. Present work schedules should be expanded to include an additional shift where this is warranted. The labour is available now and may not be there later on.

"A large number of veterans have been demobilized and more are leaving the services daily. These men and women are the finest available material from which to build up your staff for the post war period. They are looking for opportunities to re-establish themselves in civil life. Your opportunity to obtain their services is immediate and delay will probably mean that once established, they will not want to change.

"The National Employment Service of the Department of Labour is the clearing house where job opportunities and available labour meet. You are urged to immediately list your requirements for the next three or four months with the nearest local office where every effort will be made to refer to you applicants with the skill which you require.

"We ask that you take advantage of this opportunity not solely in your own interest but also to assist in keeping employment in Canada at the highest possible level."

Decline in proportion of women in employment

A decline in the proportion of women in employment has been reported by the Dominion Bureau of Statistics. At the beginning of October, 1945, of every 1,000 employed workers 253 were women, whereas a year previously 271 per 1,000 had been women.

The report estimates an overall decline in employment, male and female, of 7.5 per cent between October 1, 1944, and October 1, 1945. Among men the reduction was approximately 5.3 per cent, and among women it was 13.5 per cent.

A more detailed account of this report may be found elsewhere in this issue on page 83.

Applications for certification to Wartime Labour Relations Boards

Since it commenced operations on March 20, 1944, the Wartime Labour Relations Board (National), has received 322 applications for certification. Certification was granted to 189 employees' organizations as collective bargaining representatives, while 37 applications were rejected. In addition 24 were referred to Provincial Boards, 39 were withdrawn and 4 were dropped. Thirteen were being investigated as of December 31, 1945, while the decision of the Board was pending in 16.

The Board ordered 59 union representation votes.

Provincial Boards have received 3,058 applications for certification, granted 1,952 and rejected 259. Union representation votes have been ordered in 198 cases.

For the year 1945, British Columbia received the greatest number of applications, 786, of which 434 were granted and 79 rejected. Ontario was next with 301 of which 216 were granted and 38 rejected. Of the other provinces Manitoba received 179 applications, Nova Scotia 65, New Brunswick 43, Saskatchewan 23, and Quebec 22.

Canada Year Book, 1945 available for distribution

The 1945 Canada Year Book, compiled and edited by the Dominion Bureau of Statistics was issued early in January, under the authority of Hon. James A. MacKinnon, Minister of Trade and Commerce.

It is a volume of 1,200 pages and in addition to valuable reference material on Canadian resources, industry, trade and finance, it contains numerous special articles, such as "Canada's Growth in External Status"; "Canada's Part in U.N.R.R.A."; "Canada's Northern Airfields"; "The Democratic Function of the Press in Canada"; Organization for Post-

War Trade"; "Income and Other Taxation"; "Effects of the War on Agriculture, Manufacturing and the Railways"; and "Wartime Controls".

Cloth-bound copies may be obtained from The King's Printer, Ottawa, at \$2.00 each. This merely covers the cost of the paper, printing and binding. By a special arrangement, teachers, university students, and clergymen may obtain paper-bound copies for \$1.00 per copy, by applying to the Dominion Statistician, Dominion Bureau of Statistics, Ottawa. Only a limited supply has been reserved for this purpose and early application is suggested. In making remittances, cheques and money orders should be made payable to the Receiver General of Canada, Ottawa.

Preliminary figures on strikes in Canada during 1945

Preliminary figures on strike activity in Canada during 1945 show 182 strikes, involving 90,509 workers, with a time loss of 1,478,311 days. These figures will be revised at the time the annual summary of strikes and lockouts is prepared for a subsequent issue of the *LABOUR GAZETTE*.

During 1944, there were 199 strikes, involving 75,290 workers, with a time loss of 490,139 days.

Training for coal miners in Great Britain

Rules for training for work in coal mines are contained in the Coal Mines (Training) General Regulations, 1945, made on September 28 under the Coal Mines Act, 1911. The sections requiring employers to submit training schemes to the Minister of Fuel and Power came into effect on that date. Other sections will come into force on January 1, 1947.

A previous Order, the Coal Mining (Training and Medical Examination) Order, 1944, required boys entering coal mining to be given preliminary training, to work under supervision and to be physically fit for the job. (L.G. 1945, p. 942).

The regulations make the general stipulation that until he has been adequately trained, no one may do any work in or about any mine in which he has not been employed before the coming into force of the regulations except under competent instruction and supervision. Before anyone may work below ground, he must have worked above ground, receiving adequate instruction in safe and efficient methods of working below and suitable physical training. The minimum period and general conditions of training are set forth. No one may work at a coal face for the first time other than a training face, until he has worked at least 80 days below ground and at least 60 days, under the close personal

supervision of an instructor, in training in one or more specified operations at the face, including adequate instruction in the use of tools, appliances and materials. The regulations also stipulate that the first work below ground or at the coal face for which the workman has not received minimum training, must be done for prescribed minimum periods under the personal supervision of the instructor or supervising workman. Training or supervision received under the Coal Mining (Training and Medical Examination) Order may be taken into account in determining the period of training or supervision.

Before a person receives training under the regulations, a training scheme for the mine where he is to be employed must have been submitted to the Minister of Fuel and Power and approved; the regulations lay down rules concerning the scope of these schemes. In addition, every owner of a mine normally employing more than 250 persons must submit such a scheme to the Minister within nine months from the date of the regulations. Local education authorities must be consulted before about subjects requiring attendance at classes and by physical training.

Certificates must be given to persons who have received the prescribed training by training officers to be appointed by the employers. The regulations contain rules respecting the appointment and duties of these officers and also the keeping of records.

**Proposed action
of British
Government
on I.L.O.
Recommendations**

The Government of the United Kingdom issued in November a White Paper stating the action it proposes to take regarding the seven Recommendations adopted at the 26th Session of the International Labour Conference, held in Philadelphia in 1944.

Three of the Recommendations deal with social security and medical care. The Paper states that the Government has under consideration proposals for a scheme of com-

prehensive national insurance and for a health service, and therefore intends to defer decisions on these Recommendations for the time being.

Three other Recommendations concerning employment, the employment service, and the planning of public works, are accepted by the Government, with the reservation that decision is deferred on a section proposing the establishment of wage rates on the basis of job content without regard to sex until receipt of the report of the Royal Commission on Equal Pay.

The other Recommendation concerns social policy in dependent territories. The Government accepts the section dealing with general principles, and will bring the specific standards outlined in the Recommendation before the authorities competent to make them effective in each dependent territory.

**I.L.O. meetings
for 1946**

On the agenda of the third American Regional I.L.O. Conference, to be held in Mexico City beginning April 1, will be a Directors' Report on the social and economic problems of the Americas; vocational training; industrial relations; and labour inspection.

Other meetings on the I.L.O.'s 1946 program for which dates have been fixed are as follows:

Conference Delegation on Constitutional Questions, London, January 14; International Development Works Committee, Montreal, January 28; 29th session of the International Labour Conference, Montreal, September 19.

A number of additional meetings have been scheduled, but their dates have not yet been definitely decided upon. These include the 28th (Maritime) Session of the International Labour Conference; regular sessions of the Governing Body; a meeting of the Committee on Women's Work; a meeting of the Committee on Accident Prevention; and sessions of the International Industrial Committees on Iron and Steel, the Metal Trades, Textiles and the Building Industry.

Further Relaxation of Manpower Controls

Abandonment of Permit System—Reporting System Maintained

THE abandonment of the permit system previously in effect under National Selective Service Civilian Regulations was announced on December 21, 1945, by the Honourable Humphrey Mitchell, Minister of Labour.

It is now no longer necessary for a worker to obtain a permit from a Local Employment Office in order to seek employment.

However, a reporting system remains in effect under which:—

1. Employers are required to notify the National Employment Office of all vacancies in their establishments.

2. Employers are required to report to their nearest National Employment Office all additions to their staffs.

3. Unemployed workers seeking employment are required to register with the National Employment Office.

4. A person terminating employment either employer or employee, is required to give seven days' notice.

"These few remaining requirements are the very minimum necessary to give the Local Employment Offices a reasonably complete picture of the manpower supply and demand to enable them to render efficient service; and the National Employment Service relies upon the continuance of the excellent wartime co-operation afforded it by management and labour to give full effect to the program", the Minister stated.

All restrictions on advertising by either employer or employee have also been removed.

A letter sent to 175,000 employers and trade unions and signed jointly by Mr. Mitchell and Mr. Arthur MacNamara asserts that "the excellent results attained through the National Selective Service Civilian Regulations were made possible by the unselfish co-operation of employer and employee, of trade unions and associations of employers, in spite of some inconvenience in individual cases.

"Immediately after V-E Day and V-J Day," the letter continues, "and with each change in the manpower situation since, we have amended the Regulations to meet existing conditions; and we have now reached a point where further amendments are possible."

After outlining the amendments, the letter emphasizes that the notification of vacancies, placements and separations, and the registration of unemployed workers, constitute the

"very minimum requirements necessary to the efficient operation of an Employment Service designed to assist both employer and employee.

It concludes: "As in the past we were dependent on your co-operation to achieve wartime objectives, so in the future we rely on the co-operation of employees and employers in order to give you the efficient service you are entitled to expect."

Historical Summary of Manpower Controls

The principal features of Canada's wartime manpower control program were as follows:—

National Selective Service came into being in March, 1942, when the entry of men into a list of occupations and industries designated as non-essential was restricted.

In June, 1942, the requirement was introduced that all changes in employment had to channel through the offices of the Employment Service. In September the permit system was introduced when an order was passed requiring seven days' notice of an employee before he quit and of an employer before he discharged a worker.

In the following January authorization was given for the compulsory transfer of workers into essential employment; and this was effected by a series of transfer orders made between May and November, 1943.

In September, 1943, the employment "freeze" order was adopted, whereby workers were forbidden to leave essential jobs without permission from a local office.

A number of additional orders, passed at various times, supplemented the main features of the program, and dealt specifically with conditions in such industries as agriculture, coal mining, stevedoring, lumbering, and meat packing.

Relaxation of controls began immediately after the end of the war in Europe, when the compulsory transfer of workers was discontinued, and almost all restrictions on the employment of women were removed.

In August, following V-J Day, the "freeze" order and certain other controls were removed.

The abandonment of the permit system on December 31 leaves workers free to seek employment where and as they please. However, persons who are unemployed for seven days are still required to register at an Employment Office; and since the Offices will maintain a list of vacancies notified by em-

ployers it is expected that workers will find the Employment Service of great benefit in obtaining suitable jobs.

Regulations Amended

To effectuate the recent relaxations in manpower controls, an Order in Council of December 21 (P.C. 7430) amends the National Selective Service Civilian Regulations (P.C. 2796, April 24, 1945), as follows:—

1. Section Two Hundred and Two (A) is revoked.

2. Sections Two Hundred and Four, and Two Hundred and Five are revoked and the following substituted therefor:—

204. Where an employer takes an employee into employment he shall,

(a) record the prescribed particulars of the employment on a Notification of Hiring in prescribed form,

(b) within seventy-two hours of taking the employee into his employment mail or deliver a copy of the Notification of Hiring to the local office, and

(c) retain a copy of the Notification of Hiring on file.

205. No employer shall retain an employee in his employment during any day after the expiration of the period specified in paragraph (b) of section two hundred and four of these regulations unless he has complied with that paragraph.

3. Sections Two Hundred and Five (A), Two Hundred and Six, Two Hundred and Seven, Two Hundred and Seven (A), Two Hundred and Eight, Two Hundred and Nine, Two Hundred and Ten, Two Hundred and Ten (A), Two Hundred and Ten (B), Two Hundred and Ten (C), Two Hundred and Ten (D), Two Hundred and Ten (E), Two Hundred and Eleven, Two Hundred and Eleven (A) are revoked.

Repatriation of Japanese from Canada

ON November 21, 1945, Honourable Humphrey Mitchell, the Minister of Labour, in referring in the House of Commons to the large number of requests which had been received from persons of the Japanese race for repatriation to Japan, stated that the Government intended to arrange for the movement from Canada to Japan of those Japanese Nationals who had applied for repatriation; of naturalized Canadians of Japanese origin who had similarly applied and who had not revoked their applications prior to the date of the Japanese surrender, midnight, September 1, 1945; and of Canadian-born Japanese who wished to go to Japan and did not renounce such intention before an Order for Deportation was signed.

On December 17 the Prime Minister tabled in the House of Commons three Orders in Council dated December 15, 1945; P.C. 7355, 7356 and 7357, dealing with the above.

P.C. 7355 gives authority to the Minister of Labour to carry out the policy announced by the Minister of Labour as above and includes provision to enable persons deported from Canada under the Order to take their funds and personal property with them, and for the issuance of repatriation grants to provide such persons with minimum amounts of \$200 per adult and \$50 per child on leaving Canada.

P.C. 7356 provides for the removal of British and Canadian status from any naturalized persons who leave Canada for residence in Japan under P.C. 7355. It does not apply to persons born in Canada.

P.C. 7357 authorizes the establishment of a Loyalty Commission of three persons to investigate cases of Japanese Nationals and naturalized Japanese Canadians whose behaviour has cast doubt upon their loyalty and whose names are referred to the Commis-

sion by the Minister of Labour. The Commission will have authority after examination to recommend deportation.

According to a survey begun by the R.C.M. Police in the spring of 1945 at the request of the Government, the number of persons of Japanese race who made written requests for repatriation to Japan now totals:—

Japanese Nationals	2,946
Naturalized Canadians	1,466
Canadian-born	2,491
	<hr/> 6,903

Dependent children under 16 years of age of the above persons, who are included in the requests of their parents, number 3,477.

The great majority of those persons requesting repatriation are living in British Columbia, and the number elsewhere in Canada is very small.

Arrangements for repatriation of those persons going to Japan are being worked out with the United States authorities and involve shipment on U.S. ships from the Pacific Coast. The Minister of Labour was in Vancouver in the latter part of December to discuss repatriation arrangements with local officers of the Department.

Early in the New Year, representations were made to the Minister of Justice on behalf of several organizations with the argument that the above three Orders in Council were *ultra vires*, and requesting a reference to the Supreme Court of Canada to test the validity of the Orders. By Order in Council P.C. 45 of January 8, 1946, the question was referred by the Governor in Council to the Supreme Court for hearing and decision. It was understood that this hearing would take place before the end of January.

Juvenile Employment

Youth Employment Policies Recommended by Canadian Youth Commission

YOUTH and Jobs in Canada"* is the first of a series of reports to be issued by the Canadian Youth Commission. Other reports will deal with education, religion, recreation, citizenship, health and family life. Established in April, 1943, under the chairmanship of President Sidney E. Smith of the University of Toronto, to study the problems of young Canadians from 15 to 24 years of age, the Commission includes some fifty educationists and representatives of industry, labour and agriculture and of medicine, law and the church. Directing the work was Mr. R. E. G. Davis, who has recently been appointed Director of the Canadian Welfare Council.

The Commission's purpose in the study of young persons in relation to employment was, after gleaning the facts, to place its conclusions and recommendations before the public and to promote their acceptance by governments and private agencies working in this field.

Rendered more acute by the depression of the thirties, by the wartime increase in the employment of children without adequate schooling or training, by the long hours worked by juveniles in industry and by the relaxation in home and school discipline during the war years, the problems of juvenile employment and their implications for the future are of almost paramount importance in Canada to-day, according to the findings of the report. It is to the solution of these problems that the Canadian Youth Commission offers suggestions.

As a starting point the Commission sought to discover what young people themselves are thinking concerning their employment opportunities. Accordingly, organizations and individuals of all social, religious and economic groups were consulted. Part I of the Report sets out a summary of the replies received and includes some representative statements.

Part II describes certain measures which in the opinion of the Commission would help

to establish full employment in the country, and in consequence suitable jobs for all the young people able and willing to work.

Part III, entitled "Supplementary Measures to Deal with the Special Problems of Youth", shows that the demand for young workers is slackening:—

it is becoming increasingly uneconomical for employers in some industries, under conditions of modern production, to employ workers of 18 years or less, except for blind-alley jobs or at times when there is a labor shortage.

Entry to the professions is barred to many, the cost of training is high and the numbers are deliberately restricted. So, too, with the skilled trades, where, in addition, the "seniority rights" of older workers operate against new entrants.

Part IV deals with the need and machinery of public employment services in assisting young people into the right jobs.

Part V discusses the problems of some special groups: of young women, including household workers, the inequality of their opportunities, pay and other benefits as compared with men, and of young people in rural districts.

Part VI is a summary of the Commission's conclusions and recommendations.

To assist young people in relation to employment, the Commission advances two complementary proposals: first, the adoption of measures designed to delay the entry of young persons into the labour market and, second, measures to provide suitable jobs for those over 16 or 18 years of age.

School Attendance

Included in the first proposal are laws to require longer school attendance and to fix a higher minimum age for employment. As regards school leaving, the Commission recommends raising the minimum school-leaving age in all provinces to the end of the term during which the child becomes 16. Children over 15 might be given employment or home permits for a limited period. Part-time attendance at school should be required during working

* Ryerson Press, Toronto, \$1.25.

hours for employed young people between 16 and 18 who should receive wages from the employer for the time spent at school. Education authorities should be required to provide suitable courses for such young people, the policy to be applied first in the larger centres and, as teachers and equipment become available, to be extended to the smaller communities.

Minimum Age for Employment

To prevent child labour and to supplement the school attendance laws, the Commission advocates the enactment of uniform legislation in all provinces along the lines of the Conventions adopted by the International Labour Conference. The Commission considers, however, that the Canadian provinces should establish 16 as the minimum for employment in industry and, with some exceptions, in non-industrial occupations, instead of 15 as stipulated by the Conventions.

An International Labour Convention of 1937 prohibits all employment under 15 in "industrial undertakings"; another Convention of the same year forbids children under 15, or children over 15 if required by law to attend school, to be employed in "non-industrial undertakings" but children over 13 and under 15 may be permitted to do "light work", which is not harmful to their health or development or to their school progress, for not more than two hours a day, but not on Sundays, public holidays or during the night (the period between 8 p.m. and 8 a.m.). Work and school may not occupy more than seven hours on any day. The 1937 Conventions are revisions of earlier Conventions in which the minimum age was 14 years. "Industrial undertaking" includes mines, quarries, factories including shipyards and electrical works, construction of all kinds and transport by road, rail and inland waterway. "Non-industrial undertaking" includes all those not covered by the Conventions applying to industry, agriculture or employment on ocean-going vessels.

Dangerous Trades

Both of these International Labour Conventions require the fixing of a higher age than 15 for occupations which are considered dangerous to life, health or morals. The Youth Commission recommends 18 years as the minimum for such dangerous occupations and 17 years for selling newspapers and other articles on the streets or in public places, and for work in theatres, bowling-alleys, billiard-rooms and other public places of amusement, as well as in hotels and restaurants.

Child Labour on Farms

A 1921 Convention prohibits the employment of children under 14 in agriculture except outside the hours fixed for school attendance in work which does not prejudice satisfactory progress in school. The Commission recommends the adoption of this Convention with 15 as the minimum age. For purposes of practical vocational instruction, the periods of school attendance may, under this Convention, be so arranged as to permit employment on light agricultural work, and, in particular, light work connected with the harvest, provided that such employment does not reduce the annual school attendance to less than eight months.

Employment of School Children

With regard to the employment of school children, which is unregulated in Canada, the Commission proposes that no child under 14 be permitted to be employed before the close of school on any school day, that a maximum of two hours be imposed on work after the close of school on any school day and a maximum of four hours a day on Saturdays and during school holidays. It is suggested that employment after school of pupils under 17 be made conditional on satisfactory reports of the medical health officer and school principal. These recommendations are based on the law in Britain concerning the employment of school children.

Employment Conditions

Further recommendations of the Commission concerning employment include: prohibition of employment of persons under 18 for more than eight hours in a day and 36 hours in a week and, for the same age-group, 24 holidays (excluding public holidays) with pay annually, of which 12 days should be consecutive; free medical examination of all young persons before they begin work and periodically thereafter; assistance to disabled young persons to enable them to qualify for useful work; workmen's compensation, unemployment insurance benefits and minimum wage rates for farm workers; and workmen's compensation in case of accident to persons illegally employed, the individual employer in such cases to be liable for double the normal amount of compensation.

Along with higher minimum ages for school-leaving and for employment, the Commission advocates that more attention be given to apprenticeship in those industries to which it is a suitable means of entry and to training learners in other industries. For young people

out of school and out of a job, youth work-programs should be considered which will combine training and job-experience.

Youth Work-Programs

This last recommendation is based on the belief that the public works projects which will be an essential part of a full employment policy will not provide adequately for the special needs of unemployed young persons 16 to 21 years of age. The Commission devotes considerable space to this problem and advocates that work-programs for young people be set up on a voluntary basis to provide work of a varied kind for which standard wages would be paid and which would combine physical, vocational and citizenship training. The Dominion Government should bear the responsibility for planning, administering and financing such schemes but the educational courses and health services should be looked after by the provinces.

Apprenticeship

As regards apprenticeship, the Commission considers that it should be brought into conformity with existing conditions in modern industry. Special apprenticeship training centres should be established under appropriate provincial departments. Wages, progressively increased during the period of training, should be in line with the value of the work done. It is suggested that apprentices should be indentured to the industry rather than to the individual employer. Persons whose terms of apprenticeship have been interrupted by the war should be entitled to resume their training with credits for skills and experience acquired in the Armed Services.

Training and Placing Machinery

For the transition from war to peace and for peace-time conditions, the Commission recommends the fuller utilization of certain methods and machinery already developed in some measure: (1) the co-operative training schemes of the Dominion and the Provinces, first set up during the depression to aid unemployed young people, then converted, in large part, to training for war industries and now being adapted to re-establishing ex-servicemen and women in employment; and (2) the Dominion Employment Service.

The Employment Service

The Dominion Employment Service, in the opinion of the Commission, should be brought to a higher level of efficiency and, in particular, should be adapted to meet the needs of

three classes of workers: ex-servicemen and women, civilians released from war industry, and young workers who seek jobs for the first time each year. Fee-charging private employment agencies should be prohibited by law in all provinces. The Commission stresses the considerable dislocation of the demobilization period when approximately two million persons, over half of them civilians, will seek new occupations. Close to 50 per cent will be in the 15-24 age-group. Each year something less than 200,000 young people reach working age though not all of them enter the labour market. It is clear that occupational adjustment services, co-ordinated under one head to avoid duplication and waste effort, will be urgently needed.

The placing of young workers in jobs should be entrusted in all employment offices to special juvenile departments which are manned by well-trained persons, chosen for their fitness for dealing with young people and for appraising their talents and interests. These officers should work in co-operation with advisory committees of carefully selected citizens, including educationists, employers, trade unionists, physicians, lawyers, social workers, clergymen, parents as such, and others. The Commission recommends that the Employment Service should establish such juvenile employment committees in the larger centres, beginning with one or two as an experiment. Each committee member

should be willing to give some time to this work, attending meetings, interviewing juveniles (sometimes employers), and follow-up work (a second placing may be more important than a first).*

Further, the Dominion Employment Service should devise a uniform method of classifying and describing the numerous jobs now existing in Canadian industry. On this basis should be prepared reliable monographs on promising occupations for young people. The Employment Service should make available, too, up-to-date information regarding employment openings and the number of young persons seeking jobs. Consideration might be given to some plan along the lines of the Juvenile Transfer Scheme in Great Britain during the thirties by which young people were moved under supervision and at Government expense to districts where work could be obtained.

Training of Workers

As to the training of workers, the Commission considers that the Dominion-Provincial Youth Training Program should be

*In this connection, see summary of Report of Committee to Inquire into Juvenile Employment Service, London, 1945, p. 13 of this issue.

maintained and expanded. Since applicants for such training should be permitted to settle in another province, agreements should be made by which the Federal Government should pay the greater portion of the cost. The Commission commends the provision made for retraining members of the Armed Forces, and with regard to the training of new workers and the retraining of those who must seek new occupations, offers the following suggestions:

- (1) Formation of community councils which, in addition to planning and co-ordinating adjustment services generally, might mobilize all facilities useful for training purposes, e.g. schools, universities, libraries, trade unions, technical institutes, etc.
- (2) Provision of courses, designed to prepare workers for permanent employment and in line with job opportunities likely to exist, of sufficient length and quality to provide more complete skilled training than was possible under pressure of war. Living allowances should be paid to trainees not eligible for unemployment insurance benefits. Vocational guidance should be included.
- (3) Consideration of the need for training of prospective farmers.

Through residential training centres farm youths might fit themselves for urban occupation. Unskilled and semi-skilled workers could be up-graded by suitable training. The training of supervisors in plant schools which was carried on in wartime might be continued, and the operation of trade schools for specific industries is desirable.

As regards young women, the Commission believes that all guiding, training and placing services should be available for them as well as for men. It is suggested that a Women's Bureau be set up in the Department of Labour to promote the training and employment of young women. Particular attention should be given to household workers, since between 20 and 25 per cent of all female wage-earners are in this class.

The average Canadian youth becomes self-supporting only after about two years. If he is under 18, he often finds that employers prefer older and more experienced workers. Even if over 18, he may find certain occupations closed to him. The Commission, therefore, recommends:—

- (1) Part-time or holiday employment to gain work experience for young persons over 15 who are still at school;
- (2) Insistence by Government that admission to the professions and skilled trades be solely on the basis of ability;
- (3) More adequate credit facilities for would-be farmers.

Education

The Commission emphasizes the need and the desire of young Canadians for longer schooling, for greater equality of educational opportunities and for a wider choice of courses to suit all kinds of abilities. In addition to full-time attendance at school up to 16 years of age and part-time attendance during working hours up to 18 years, the Commission recommends changes in the curricula, extension of facilities for vocational guidance, and more government scholarships, student work aid and maintenance grants to enable young persons with little means to continue at school. Tuition fees should be eliminated in secondary schools and lowered in universities. It is felt that no young person of ability should be prevented by lack of funds from getting further education of the kind best suited to him.

More variety in school courses, both academic and technical, is suggested and a greater development in secondary schools of vocational education and vocational guidance but not to the exclusion of "the life needs of the pupil". To the cost of this development the Commission considers the Dominion Government should contribute generously. "Such grants, while not invading the right of each province to determine its own type of education, should be conditional on definite standards being maintained." Special attention should be given to meeting the need in rural schools for courses related to the interests and environment of the pupils without neglecting the broader aspects of an education for living. The Commission commends the increasing tendency of academic schools to broaden their scope to include vocational education and guidance and of technical schools to "enrich their curricula by courses related to other needs of life". Evening classes should provide educational opportunity comparable to that available to full-time day students. In technical education, there is need for expansion and for common provincial standards. Advanced technical institutes should provide courses of one or two years' duration for secondary school graduates requiring greater technical skill. Something similar to the "Community Institutes" proposed for the United States or the "Young People's Colleges" for Great Britain might be established to carry on a program of full or part-time schooling for those who do not desire or require a college education.

The Commission's Report concludes thus:

The present attitudes of Canadian young people have been conditioned by the hard school in which they have been trained. One cannot live through a world depression and a world war in quick succession without

generating a few doubts about the way society operates . . .

Fortunately, this is only part of the story. Young people have not lost hope that things can be worked out. Their mood as they regard the future of their country is one of sober optimism. They do not expect Utopia and are themselves ready to face difficulties. What they want essentially is the chance as workers and citizens to play their part along

with adults in finding the solutions to Canada's post-war problems. There surely can be no question of our response to such a demand. To take youth into partnership is not only the fair thing. It will also help to ensure that, as a nation, we go forward to the tasks of peace with a measure of the courage and spirit of adventure which many of these young people have displayed in the war.

The Juvenile Employment Service in Great Britain

IMPORTANT recommendations towards a more efficient and comprehensive service are contained in the report of the Committee on the Juvenile Employment Service issued on November 21, 1945. The Committee, representing the Ministries of Labour and Education, Education Authorities of England, Scotland and Wales, local government bodies, the British Employers' Confederation and the Trades Union Congress, was appointed in January, 1945, to "consider the measures necessary to establish a comprehensive Juvenile Employment Service . . . and to make suggestions for a practicable scheme".

According to the Committee,

the Juvenile Employment Service must see the growing adolescent through every aspect of his work environment; it must be in a position to exercise effective supervision over him at work; it must re-advise and re-place him if necessary; it must take an active interest in the arrangements made within industry for his training and progress; it must have really adequate knowledge about occupations and their requirements; and it must know, not merely on paper but in fact, what goes on in industrial establishments and other places of employment. It requires, in short, the full resources of an industrial authority with its factory and wages inspectorate, its welfare, labour supply and specialist training services, and its industrial relations experience. No purely educational service, however good, can have this range of contacts, give this range of protection and provide an employment service of comparable efficiency.

The Juvenile Employment Service consists of two parts: the placing offices and advisory committees attached to them. The focus of the Service locally is an office under a Juvenile Employment Officer which may be in the Employment Exchange when it is operated by the Ministry of Labour, or in an office operated by the local Education Authority, in which case it is called a Juvenile Employment Bureau. This dual system arose from the authority under the Labour Exchanges Act, 1909, to set up Juvenile Departments in the Labour Exchanges, and the 1910 Choice of Employment Act empowering local Education Authorities to set up bureaux to help boys and girls in choosing employment.

Proper premises for the work of the Service are of great importance. In the opinion of the Committee, juveniles should not be dealt with in the Adult Departments of the Labour Exchanges except in some small offices where no other arrangement is feasible. The offices should be accommodated in County Colleges (to be established in the future under the Education Act, 1944) in appropriate cases. Interviews should be given in a separate room, and other business conducted in a larger office should be done at separate tables spaced to give some privacy. High, broad and solid counters between officers and juveniles are "psychological barriers", and the Ministry's policy of abolishing them is commended.

Advisory Committees

For many years, beginning in 1910, special committees for juvenile employment to help place young persons in suitable employment and to exercise some supervision over them in their early years of employment have been attached to the local employment offices in Britain (L.G. 1944, p. 716). Two kinds of committees have developed: "juvenile advisory committees" appointed by the Minister of Labour and "juvenile employment committees" appointed by the local Education Authorities. Their functions and constitution are similar, however, and since 1927 both systems have been under the supervision of the Ministry of Labour which finances their work. Committee members give their services free. The committees advise boys and girls and their parents about the choice of suitable employment, help to obtain the employment, try to supply employers with young workers, and keep in touch with the young people in their first years of employment.

A "juvenile advisory committee" works through the juvenile department of the Employment Exchange to which the committee is attached, and the Juvenile Employment Officer acts as secretary to it. A "juvenile employment committee" is responsible to the local education committee, which appoints it, for the Juvenile Employment Bureau established by the Education Authority.

The Committee, while not insisting that this dual system be removed, recommends changes in the administration to have both types of committees controlled through the regional offices of the Ministry of Labour. A Central Juvenile Employment Executive in charge of the Service, with control over policy and with authority to issue instructions and memoranda to all parts of the Service so as to ensure a common minimum standard of efficiency is also proposed by the Committee. This Executive would be staffed by officers of the Ministries of Labour and Education and the Scottish Education Department, and the Minister of Labour would be responsible to Parliament for it. The Minister would have the power to terminate the exercise of employment powers of a local Education Authority on the grounds of inefficiency. To replace the National Advisory Councils for England and Wales, and for Scotland, the Committee recommends that a National Advisory Council for Great Britain be set up to assist the Executive. It should include representatives Municipal and Education Authorities, teachers, employers and workpeople, with separate committees for Scotland and Wales. Appointments would be for a term of 3 years, and the Committee favours the introduction of new personnel at that time.

Vocational Guidance

The Committee urges that "vocational guidance should be given before leaving school and that every school (including private schools) should be required by statute to register with the Service, in such manner as may be prescribed, every school-leaver and every person attaining the age of 17 if still at school, and that the Service should be empowered to require the attendance for interview of any person so registered within a period of one year from the date of registration".

A talk by a Juvenile Employment Officer on the different kinds of career which all juveniles would attend during their last school year, preferably with their parents present, would be the first step. In addition to films, industrial exhibitions and visits to industrial and commercial establishments, the Committee recommends that the Ministry of Labour in association with the Education Departments should prepare and distribute pamphlets about careers to give boys and girls and their parents adequate preliminary information.

An interview with the pupil by the Juvenile Employment Officer with the teacher and parent present is the second and more important stage. The interview should be intimate, of sufficient length, and should be on the school premises where these are adequate.

Information

To give vocational guidance, the Juvenile Employment Officer requires information both about the juvenile and industry, commerce and the professions. School reports of wider scope are needed to cover all aspects of a juvenile's life including his health, aptitudes and hobbies. The knowledge of industry, etc. should be based on general information about work and conditions in different industries and in particular firms, employment trends, and an intensive study of job analysis. Industry should aid in this field by setting up national joint councils to deal specifically with the training and recruitment of juveniles.

Placing

Placing the juvenile in employment is the next step after giving vocational guidance. The Committee views with disfavour the compulsory system of registration by young persons and their compulsory direction into industry despite its agreement that the voluntary method is not likely fully to achieve the desired purposes of the right job for given qualifications and interests, etc., diversion from harmful and "blind-alley" occupations, and efficient distribution of the limited supply of juveniles. The only element of compulsion suggested is the proposal that all schools be required by statute to register every school-leaver or pupil who is 17 with the Service and that the pupil have an interview with the Juvenile Employment Officer within one year from the date of registration.

Prohibition of harmful employment under the Factories Act, as has been done, is one way of strengthening the voluntary system, and the Committee recommends that jobs which may entail hazards of one kind or another should be regularly reviewed with the object of prohibiting them to juveniles under the Factories Act and other enactments. Vocational guidance, it is hoped, will aid greatly in helping youngsters to stay out of "blind-alley" occupations by giving guidance and encouraging the use of the Employment Service. The Committee commends the growing practice in industry of having specially qualified officers in charge of recruiting juveniles and urges that they co-operate with the Service. The Committee opposes the hiring of juveniles by a firm because they happen to be the children of employees, and the use of other private contacts by employers.

A scheme of "training grants" to enable suitable young persons to train for a skilled occupation away from home where no suitable facilities are available in their district is another important recommendation.

Supervision

Placing in a second or third job should be "an occasion for undertaking vocational guidance afresh", and the separation from the previous job should be studied carefully. Supervision of the young worker, apart from this, is of the greatest importance according to the Committee. In this connection,

the Juvenile Employment Officer has a special function to perform. It is his duty to pass the juvenile on to the adult service in due time and he must be satisfied that he has done all he can to help him to progress towards a stable career. If he finds that the juvenile is in non-progressive or demoralizing work he will be clearly justified in trying to get him into a more satisfactory occupation. This means that he should be in as close touch as possible with the young workers in his locality.

Juveniles should be encouraged to call at the Employment Office, whether their purpose is a change of job, a desire for advice, or merely to report how they are faring. The use of "open evenings", the setting aside of certain evenings for juveniles to come to the Employment Office for discussion of problems, is highly praised, and it is recommended that not only personal invitations by letter be used but other publicity as well, and that the goodwill of employers, parents, teachers, and trade union leaders be sought and utilized for this purpose. The Committee suggests in this respect that only those members of Employment Committees who have the requisite experience and knowledge serve at these "open evenings".

Staff Training

Of great importance is the competence of the staff of the Employment Service for dealing with juveniles. The Committee's recommendations on the subject of staff include a specially selected inspectorate at headquarters whose primary functions would be to provide information for the Central Juvenile Employment Executive and to assist in raising the standard of the Service generally; officers from regional offices of the Ministry of Labour with particular knowledge of juvenile work would be associated with them when they inspect "the choice of employment work" carried on in the office. Senior officials in the Juvenile Employment Service, according to the Committee, should have, in addition to the educational qualifications,

knowledge of industrial requirement of jobs and of industry generally; interest, experience and knowledge of social service and training in public speaking particularly to young people; knowledge and experience of all other matters involved in an adequate vocational guidance service.

The training of staff should include live training at selected offices under personal supervision, lectures on administration, and intensive courses in interviewing, vocational guidance, vacancy work, public speaking, committee work, industrial organization and processes. Visits to industrial establishments, training centres, technical and other colleges and youth clubs should also be included, and the use of group meetings for discussion is suggested.

Juveniles in the Brick and Tile and Paper-Products Industries American Standards

THE safest jobs and the most hazardous jobs for 16 and 17-year old workers in the brick and tile and the converted paper-products industries are indicated in two leaflets issued by the Children's Bureau of the United States Department of Labour.

The Fair Labour Standards Act, 1938, prohibits the employment of boys and girls under 16 in inter-state commerce and in industries producing goods for shipment across State boundaries, and gives to the Chief of the Children's Bureau power to declare any occupation hazardous, in which case the minimum age for employment is 18 years. Standards drawn up by the Bureau supplement the hazardous-occupation orders and are intended to guide employers in placing 16 and 17-year olds. Twelve earlier leaflets in this Advisory

Standards Series were summarized in the *LABOUR GAZETTE*, 1944, p.22 and 1945, p.727.

The brick and tile industry has more than twice as high an industrial-injury frequency rate as the average for all manufacturing industries. It is recommended that in this industry young workers should be excluded from small plants where employees must work on many or all processes, and that none under 18 should be permitted to work in any capacity in plants manufacturing silica products. In general, heavy lifting or strenuous physical exertion and the operation of motor or power-driven machines should be forbidden. Considered too hazardous for those under 18 are the following: all operations involved in winning; most machine-house or annex operations such as work in connection with hoisting

and dumping; operating of crushers, granulators, molding machines, cutting machines, presses and the like; work in clay bins and in the drier; building or tending fires; operating or assisting with motor-driven transfers or tugs; lifting heavy materials; mechanical setting operations; building temporary kilns; all operations in connection with burning; all work in drawing, stacking and loading where setters, hoists, and other mechanical equipment are used; all work in plant maintenance and power-plant operations; use of abrasive wheels in finishing operations; operation of elevators, cranes, hoists and other power-driven equipment.

Comparatively safe work is that of hackers on green belt; hand-molding and hand-finishing tile operations; trucking to drying floor; pushing cars by hand to, but not into, driers and to kilns; certain finishing operations; tossing and hand-setting in permanent and temporary kilns; hand work in drawing, stacking and loading; packing products in cartons; general clean-up; nailing racks and repairing kiln floors.

As regards the converted paper-products industries, including about 40 separate industries with some similarity, the recommendations as to suitable and unsuitable jobs apply, in part at least, to all of them. In these industries, young persons of 16 and 17 years should not: operate power-driven elevators, cranes, hoists or other equipment for handling raw materials or finished products; handle heavy rolls or packages of paper; work as millwrights or maintenance men or in the power plant; work in monotype casting when there is

exposure to lead fumes; set up, clean, or oil machines in motion; work in the stainer and clay-making departments or at colour-spraying with inks mixed with inflammable materials; make glue or tend the conveyor back or Brackett cutting knife in the second-way cutting operation.

In addition, the leaflet specifies a large number of power-driven machines, the operation, feeding or tending of which is considered unsafe for young workers.

Comparatively safe is the operation of machines such as are used for box-stripping, bundling, making envelopes, folding and gluing, hole punching, jogging, merchandise-marking, patching, sewing, stripping, taping, wiring and tag-stringing; and the operation of partition slotters, automatically fed; re-winders; printing presses automatically fed, cylinder or platen. Young persons may safely take away from the following: corrugators and single or double-facer machines; die-cutting and creasing presses, cylinder; parchmentizing, waxing and coating machines; printing presses, cylinder; quadruple stayers; sheeters; wrapping machines, automatic; roll slitters, slotters, scorers and creasers.

Considered generally suitable for young workers is work in connection with packing, boxing, shipping and hand trucking of finished products; work in connection with the silk-screen process; work as compositors and lock-up helpers in box printing and as helpers in ink and plate department; die-mounting; general labour and clean-up work and other miscellaneous occupations.

Social Security

Administration of Family Allowances in Canada

THE Canadian Family Allowances Act came into operation in July, 1945. Under its provisions allowances of from five to eight dollars per child are paid monthly to the mothers of children under sixteen years of age.

By November, cheques were being issued to 1,363,802 families, and 3,222,946 children were benefiting by the allowances. An average of \$14.16 was being paid monthly per family, and \$6.12 per child.

The total amount paid out in family allowances from July until the end of December was approximately \$113,742,000.

The total estimated cost of family allowances is placed at \$250,000,000 annually although a considerable portion of this sum is recoverable through refunds under existing income tax regulations.

Relation of Allowances to Income Tax

As the allowances are tax free, they do not put recipients in a higher income bracket. However, as Parliament has approved the principle that individuals cannot receive both full family allowance payments and full income tax deductions for children, the extent to which income taxpayers benefit is graded according to income.

The Income Tax Division has worked out two schedules to deal with family allowances and income tax credits. The first schedule concerns families up to and including three children, the second concerns families with four or more children. Under this scheme the full amount of the family allowance received is retained by heads of families with three children or less as long as income does not exceed \$1,300. Heads of families with four or more children can retain the full family allowance if income does not exceed \$1,400.

Between these lower income levels and upper levels of \$3,200 and \$3,600 respectively, graduated percentage deductions are made. In the first group persons cease to benefit when income passes the \$3,200 mark and in the second group they cease to benefit when income passes the \$3,600 mark.

Administration of Act

The Family Allowances Act is administered by the Department of National Health and Welfare.

In order to facilitate administration, the Department set up regional family allowances offices in each provincial capital. To these were attached branch offices of the Comptroller of the Treasury so that cheques could be handled on a regional basis. The total number of employees in the nine regional family allowances offices is slightly over 500 and treasury office staffs number approximately 560. Administrative costs plus treasury costs amount to between one and two per cent of the total estimated cost of family allowances.

In putting the Family Allowances Act into operation, one of the first steps, taken in co-operation with the Vital Statistics Branch of the Dominion Bureau of Statistics, was to work out a plan whereby, generally, provincial records of vital statistics became available for federal use in checking and controlling departmental records. Had such an arrangement not been possible, in all probability each parent would have been required to supply birth certificates for each member of the family registered for an allowance. A sudden demand for over two million birth certificates could not have been handled by the provinces without staffs doubled or tripled in size. Accordingly, an arrangement was made whereby the registration form was checked against birth indices compiled from provincial records after it had been received by the regional family allowance officer. For children not born in Canada, reliance was placed on the records of the Immigration Branch of the Department of Mines and Resources and other sources of information.

The mechanics of obtaining provincial records began with microfilming all birth registrations since 1925. The federal government assumed the entire cost of the microfilming process—film, cameras and technicians to do the job. It further agreed to pay 10 cents per name for each microfilm of new

NOTE.—Average per child and family higher in November than normal in some districts due to retroactive payment of allowances having been made in respect of accounts previously deferred.

birth registrations from July, 1945, once the first backlog of filming had been removed. After the microfilming was completed, one copy was retained in the provincial capitals and one copy sent to the Dominion Bureau of Statistics in Ottawa. From the microfilms, Hollerith punch cards were made out, sorted and tabulated mechanically for use in checking against registration forms.

Under this arrangement each province maintains all its rights and liberties connected with vital statistics but at the same time makes available a national index which may be adapted for future use when other social security measures are under discussion or being put into operation. Incidental advantages include having duplicate records available in case of loss by fire, in decentralization and in having records readily adaptable for cross checking between provinces.

Another way in which the federal government and the provinces co-operate is in looking after the small percentage of families who may not use their allowances correctly. If experience of the Dependent's Allowance Board is any criterion, this percentage is expected to be very small. The Department of National Health and Welfare has no intention of setting up social agencies of its own but will rely on those organizations which have been established under provincial and local auspices to render child welfare services to various groups of the community.

Registration

The initial registration was carried out in Prince Edward Island which provided an ideal proving ground because of its small size and fairly homogeneous population. The form prepared for registration asked seven questions. Only about four per cent of the Prince Edward Island registrations required further correspondence to obtain all the necessary information.

Registration in the other provinces began March 22. Valuable voluntary assistance in opening mail and in certain primary processing of forms was provided by women organized through the Women's Voluntary Services' office in Ottawa. The total number of applications received to the end of July, 1945, was 2,956,844.

Payment of Allowances

Allowances are paid to the mother or guardian of every child in Canada under 16

years of age: (a) who is living in a family unit (that is, the allowances are paid to the person who maintains the child, whether or not he is the real parent, but not to an institution); (b) who has been resident in Canada since birth or for at least three years immediately prior to registration; or (c) whose father's or mother's domicile at the time of the child's birth and for three years previously was in Canada and has continued to be in Canada up to the date of registration; or (d) who was born while his father or mother was a member of the naval, military or air forces of Canada or within 12 months after he or she ceased to be a member of these forces.

The allowance ceases to be payable in the case of a child who is above six years of age and physically fit and fails to attend school according to existing provincial laws, or to receive equivalent training as prescribed in the regulations of the Act. The allowance ends if the child dies or ceases to reside in Canada. Also, if it is reported from credible sources to the director of family allowances that the money is being wrongfully used, consideration is given to the question of procuring a responsible person, other than the parent, to act as payee on behalf of the children concerned.

The monthly scale of payments is as follows:—

Children under 6 years of age.....	\$5
Children between 6 and 10 years....	6
Children between 10 and 13 years....	7
Children between 13 and 16 years....	8

The allowances are reduced after the fourth child as clothing, school books and other equipment can be used again by the younger children of the family. There is a reduction of \$1 for the fifth child, \$2 each for the sixth and seventh child and \$3 for each additional child.

Eskimos and Indians are given separate consideration. Under the terms of the Act, the cheques are to be mailed monthly. As cheques are valueless to Eskimos and as it is impossible for them to be delivered monthly in the northland, arrangements have been made through the Bureau of North West Territories and Yukon and the Indian Affairs Branch of the Department of Mines and Resources to register Eskimos and Indians. Payment is made in cash or in kind, whichever is thought advisable.

Increase in Social Security Benefits in New Zealand

SOCIAL security benefits in New Zealand have been substantially increased as a result of recent amendments to the Social Security Act.

The effect of the new legislation is to establish a minimum family income of £5 a week for a man, wife and two children. This sum is to be paid by the Government in the event of contingencies such as unemployment, sickness, invalidity, etc. For an unmarried adult the rate is £2 a week, while a married man may receive £2 for himself and £2 for his wife.

In addition family allowances are paid at a rate of ten shillings per child; and these allowances, which formerly had been paid only to persons with an income of less than £5.10.0 a week, will be paid unconditionally after April 1, 1946.

The previous rates of social security benefit had varied for the different contingencies, and had been at a considerably lower level. The new flat rate of £2 a week for each adult, however, applies to almost all types of benefit including unemployment, sickness, invalidity, and old age. An exception is the benefit paid to widows without children, which is £1.10.0. Widows with children receive the full rate of £2 a week, together with family allowance for the children, and may receive a supplementary benefit at a rate not exceeding £1 a week at the discretion of the Social Security Commission. A lesser rate is also paid to persons under 20 years of age, for whom unemployment and sickness benefit rates are £1 a week, and invalidity is £1.10.0.

All benefits are tax free, but payment is subject to a means test and may be reduced if the applicant has a private income over a certain amount, or has accumulated property of more than a certain capital value. Generally, £1 a week of private income is allowable; if the applicant has a greater income, a proportionate reduction in benefit is made, although the reduction is discretionary in the case of unemployment and sickness. "Income", for purposes of the Act, does not include funeral benefits, receipts from sale of property or insurance covering property, or from life insurance policies not exceeding £500.

In regard to property no reduction is made for the value of a beneficiary's home, furniture and personal effects or the land on which his home is built, or for annuities and life insurance policies. Other property up to a value of £500 is also allowed.

Old age benefit, which is payable to persons over the age of 60 subject to a means test, will eventually be paid only to persons between the ages of 60 and 65, since for persons over 65 it will be replaced by universal superannuation, payable as of right to all persons who

reach that age, irrespective of income. The superannuation rate is being increased by stages each year, and will reach a maximum in 1970. By the terms of the new Act, the maximum has been raised from £84.10.0 a year to £104 a year, or £2 a week per person.

No change is made in the provisions of the Act regarding emergency benefits, which may be paid, at the discretion of the Commission, to applicants who for some reason are not qualified to receive other benefits under the Act.

New Zealand's Social Security Act was passed in 1938. Many sections of the program were already in existence, however, under legislation adopted at various times since 1898.

The purpose of the Act was to provide universal protection against loss of income, and also to provide complete medical care.

The social security program is financed from a 5 per cent income tax on individuals and business firms, and a universal social security registration fee, supplemented by a deficiency grant from the Government. (L.G., 1943, p. 50.)

Rehabilitation

Counselling Services for Members of Armed Forces on Discharge

THE readjustment necessary when a member of the Armed Forces returns to civil life is based on a carefully integrated plan.

The necessity for counsellors in connection with postwar opportunities in civilian life is obvious when it is considered that active service personnel have been isolated from civilian contacts during long periods of service overseas and have become unfamiliar with normal channels of civilian earning power. Realizing this, the Armed Services, Department of Veterans Affairs and the Department of Labour are each providing counselling services all along the rehabilitation path.

Counselling is a carefully designed service to encourage the ex-service man or ex-service woman to select an occupational objective which is logical, in view of his or her background and capabilities, and then to assist that person in completing and putting into action a program which will reach that objective.

This counselling begins while the man is still in the Navy, Army or Air Force, and in many cases long before he has been told to expect his discharge. Just prior to, and immediately after discharge, counselling is continued and again in the readjustment period that occurs when the ex-service person is getting used to being a civilian.

Counselling must necessarily take place over a period of time. Most service personnel will want to think over the postwar undertakings. They could not be expected to make a decision in one interview, or even in two or three. For this reason provision has been made for counselling during the entire transition from life in the Forces to re-settlement in civilian life.

In the early stages it is expected that the service counsellors will provide knowledge of the rehabilitation legislation and start the soldier, sailor or airman thinking about his return to civilian life. The final decision can be made in the discharge or release centre while separation from the Forces is taking place, or in the Department of Veterans Affairs' rehabilitation centre immediately following discharge. Further counselling is provided for persons who change their minds or who find difficulty in carrying out their re-establishment plans.

Five Main Types of Counsellors

Counsellors, so-called, are divided into five main types. The first type is the Service Counsellor in the repatriation depot or discharge or release centre. The second type, known as Armed Forces Interviewing Officer, is an employee of the National Employment Service. He is stationed in the discharge or release centre to provide National Registration certificates and advise on reinstatement and other matters coming within the purview of the Department of Labour.

In the Department of Veterans Affairs' rehabilitation centre, to which discharged persons are directed for counselling and advice on grants and benefits, the third type of counsellor is found. He is known simply as Department of Veterans Affairs' counsellor and is qualified to suggest and recommend on all phases of a veteran's re-establishment. The fourth type, Veterans' Employment Adviser of the Department of Labour, forms part of these rehabilitation centres and has the function of advising on matters of employment.

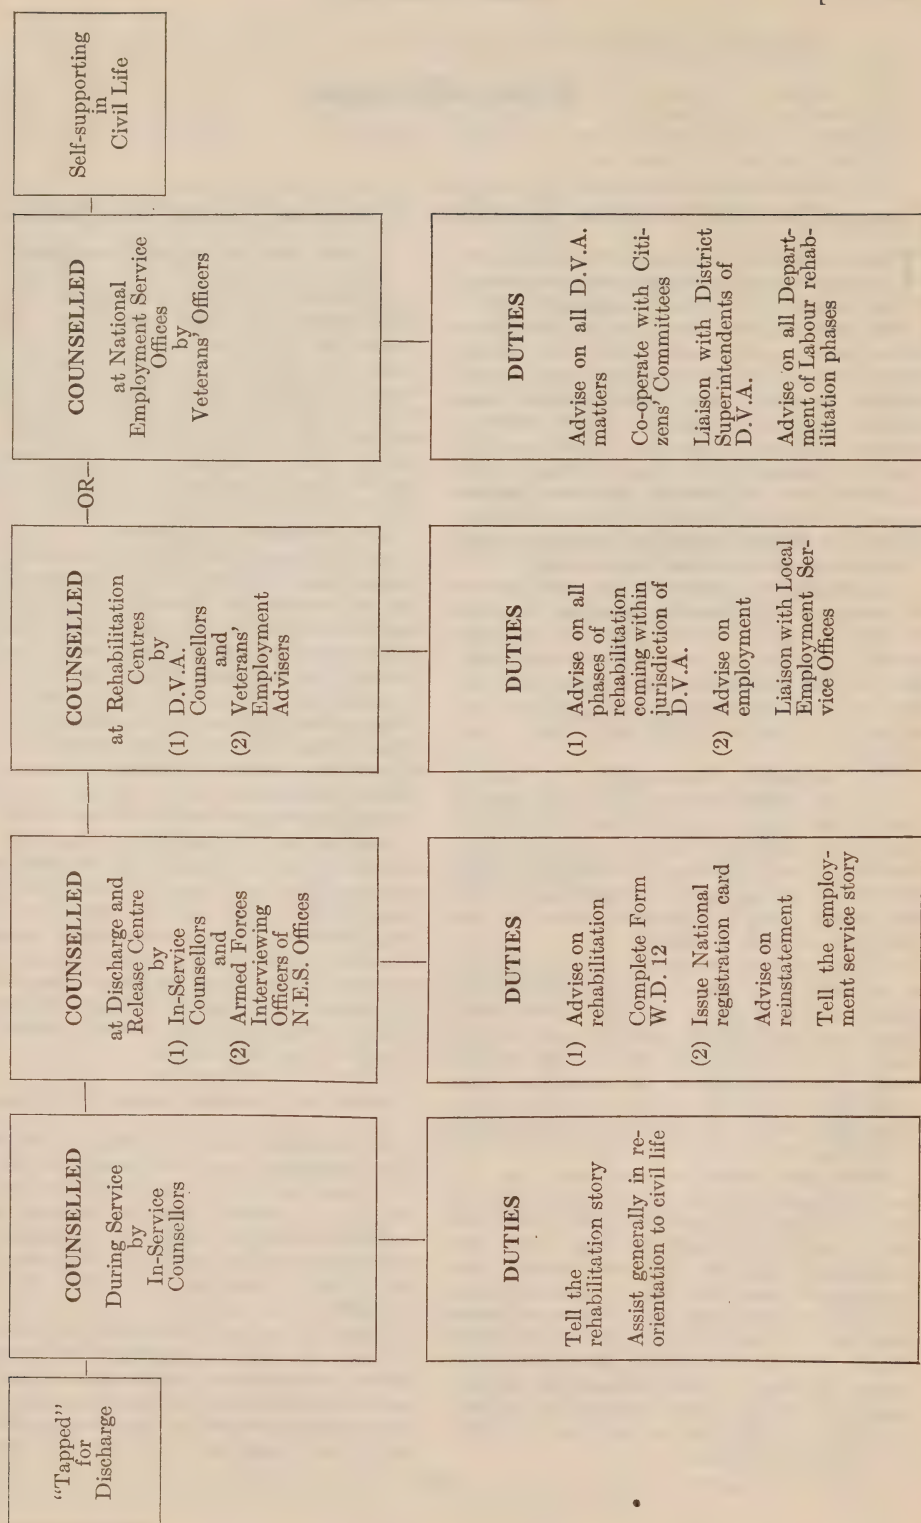

The fifth type is available to ex-service persons in the local offices of the National Employment Service in centres where there is no rehabilitation centre of Department of Veterans Affairs. This type, known as Veterans' Officer, is a member of the staff of the Employment Office, but is authorized also to deal with matters affecting Department of Veterans Affairs having been given special training by officials of that Department.

Selecting and Training Counselling Personnel

Much thought has been given to the selection of personnel who will undertake the job of counselling. A counsellor is, therefore, usually well educated and has had experience in several lines of occupation, in order that advice given to men and women coming from the Forces can be based on practical experience.

Extensive training programs have been developed by the Department of Veterans Affairs. Counsellors in the Armed Services and Department of Labour are trained at these courses, as well as Department of Veterans Affairs' personnel.

COUNSELLING SERVICES—REHABILITATION PROCEDURE

Service Interview Summary (W.D. 12)

The counselling procedure is based on a Service Interview Summary which is made on a form known as a "W.D. 12". This W.D. 12 is a confidential document completed at discharge and release centres by personnel of the Navy, Army or Air Force.

The service interview summary is designed to present all details pertinent to civil re-establishment of ex-service personnel. This record presents a comprehensive picture of the service person's status at the time of discharge. It contains the following:

- (1) Pre-enlistment documents and service experience.
- (2) Dischargee's statement on future plans.

- (3) Appraisal of dischargee's civilian and service background, and civil objective.
- (4) Service counsellors recommendation as to the course of action to be taken by the dischargee.

Four copies of the W.D. 12 are made and it is distributed to the Records Branch of the Service, District Office of D.V.A., Head Office of D.V.A., Ottawa, and to Local National Employment Service Office.

The gap that will occur in the lives of service personnel as they leave the Armed Forces for a civilian career provides the opportunity for counselling. During this period many men and women will be shaping their future lives and the objective of the entire counselling program is to provide information and assistance for them during the all-important period.

Placement of Ex-Service Personnel by National Employment Service

THE service rendered to the veteran by the National Employment Service begins before discharge actually takes place. When a man is about to be discharged from any of the Armed Services he is interviewed at the Army, Navy or Air Force discharge unit by a representative of the local employment office. The interview is primarily for the purpose of advising that man on his rights in regard to reinstatement, rights under the Unemployment Insurance Act, possibilities of employment, etc. Officials who carry out interviews are required to be familiar with the provisions of the Reinstatement in Civil Employment Act and they must also have a good knowledge of the Unemployment Insurance Act, particularly as it affects discharged persons. During the interview the employment officer provides each person being discharged with a National Registration Certificate or a 14-day temporary permit. This is a service which was undertaken at the request of the Department of National Defence in order that persons being discharged might be supplied with National Registration Certificates at the time of discharge, instead of having to report later at post offices in order to obtain them.

The Armed Forces' interviewing officers at discharge centres are concerned with three different groups:—

- (a) Those who are not seeking employment of any kind.
- (b) Those who are seeking reinstatement in their old jobs.
- (c) Those who are seeking new employment.

For those who are not seeking employment, there is, of course, no service necessary by the employment officers at the discharge centre. To those who are seeking reinstatement in their old job, the employment office representative issues a reinstatement permit at the discharge establishment. Such ex-service personnel are, therefore, able to go immediately to their old employers and be reinstated without the bother of having to call at the local Employment Office. Those who are seeking new employment are given a letter of introduction to the Manager of the local employment office in the town where they intend to reside. Presentation of this letter insures that the applicant will be at once referred to the proper official dealing with ex-service personnel.

Procedure in Local Offices

At each local office there has been established an Armed Forces Registration Unit. In the larger offices an actual unit has been set up to carry out the special function involved, which consists of insuring that discharged persons reporting to that office for employment, receive preferred attention until such time as they are placed in suitable jobs. The size of the office has a considerable bearing on the actual physical set-up. Employment offices vary in size from those having hundreds of employees to those which have only three employees. In the smaller offices, special consideration for discharged persons is easy to arrange and is naturally looked after by the manager himself. But in the larger offices,

personnel have been provided for the purpose of operating Armed Forces Registration Units. The procedure in these larger offices is therefore, of necessity, more complicated than it is in the smaller offices. Any discharged person reporting to an office is immediately referred by the information desk to an official whose duty it is to look after the Armed Forces.

This official briefly explains the operation, advice and assistance to ex-service personnel to make sure that the applicant has been given all the information which should have been conveyed to him in the pre-discharge interview. The A.R.F.U. official then registers the man on employment office Form 701. This form gives the relevant information necessary about the man's occupational history and lists his primary occupation and also a secondary occupation if he has one. If he is entitled to veterans' preference, this fact is noted on the card by the initials "VP" in red ink. Veterans' preference is a preference in referral and is given to those who have had overseas service or who are in receipt of a pension. The applicant is then taken to the appropriate section for actual placement. (There are separate sections for the different types of employment, for example, skilled trades, unskilled labour, clerical and sales, etc.). The official dealing with the applicant in that section will refer him to a job if one is available immediately, or explain to him there is no suitable job available and that a call will be sent out to him as soon as there is one. When a man is referred to a job he is given an introduction slip to the employer. If accepted, the employer returns the confirmation slip to the local office.

Follow-up Service

In order that the A.F.R.U. may maintain a proper follow-up of all ex-service personnel, a card index system is maintained. By checking over these cards daily, the A.F.R.U. officials can pick out those who have been registered for the longest periods. They then check with the Selection Sections and make every endeavour to discover an opening to which these men can be referred. Also many persons are not placed in suitable employment in the first instance and it is the duty of the A.F.R.U. to follow up all such cases until suitable employment has been found.

The Department of Veterans Affairs has assumed the responsibility for the placement of handicapped veterans. However, the Casualty Rehabilitation Officers of that Department and Special Placement Sections of the Employment Offices of the Department

of Labour work in the very closest co-operation. Actually co-operation is so complete that it would appear that these officials were working for one Department rather than for two.

The co-operation between the Department of Veterans Affairs and the National Employment Service extends even further than this. In every local employment office there is an official whose duty it is to provide information, advice and assistance to ex-service personnel on the rehabilitation program generally. These "Veterans Officers", in addition to their training in the Employment Service, have also been trained by the Department of Veterans Affairs, so that they are thoroughly familiar with all aspects of the rehabilitation program.

In every D.V.A. Rehabilitation centre the National Employment Service has Veterans' Employment Advisers.

Features Veterans' Skills

A comprehensive campaign through the medium of newspaper and radio directed to prospective employers, to popularize the ex-servicemen's trades' skills and qualifications, obtained while in the Services has been initiated by the Dominion Department of Labour, according to Arthur MacNamara, Deputy Minister.

Thousands of servicemen discharged from the forces are skilled or semi-skilled in many occupations directly applicable to civilian use, but many thousands more have obtained experience, including the development of personality and good judgment which will be invaluable to the future employer. Draftsmen, stationary engineers, mechanics, accountants, office workers and countless service trades that have civilian equivalents are listed with local offices of the National Employment Service. Many who were air-frame mechanics, radar operators, carpenters, cooks and engineroom personnel are fitted to take up employment with little or no specific civilian training. Over 250 "skilled" service trades are represented by ex-servicemen's applications for employment.

The Dominion-wide appeal, addressed directly to "Mr. Employer" is designed to facilitate the bringing together of employer and the veteran-employee through the agency of the National Employment Service. Especially featured in the day to day National Employment Service advertising, "Employment News" and "Jobs Available", business executives and employers on the lookout for alert, trained, dependable workers who have deserved well of their country, by their sacrifices during the recent, fateful, wartime period will find prominently listed the facili-

ties of the local employment offices with regard to the provision of ex-service personnel immediately available for the jobs offered.

Mr. MacNamara stated: "While it is the object of the National Employment Service to assist all citizens in obtaining the most suitable employment, it is however, felt at

this time, with the swelling numbers of discharged servicemen and women that special attention should be brought to their skills and aptitudes which are vitally important in assisting industrial reconversion—the Canadian serviceman helped win the war; his skill will help win the peace, too".

*Student Veterans' Conference**

REHABILITATION problems of especial interest to Canada's student veterans were discussed at a Conference in Montreal the last week of 1945. Sixty delegates were present, representing 15,000 student veterans in 25 Canadian Universities. The Conference, sponsored by the Dominion Command of the Canadian Legion, was presided over by J. L. Starkey of the McGill University Veterans' Society. Air Marshal L. S. Breadner, Admiral Percy Nelles, Major-General E. L. M. Burns, Brigadier M. F. Gregg, V.C., Lt.-Col. Paul Triquet, V.C., and the principals of twelve Canadian Universities attended the Conference.

Three panels, each conducting a series of investigations based on a coast-to-coast survey on the cost of living and university facilities, formed the nucleus of the Conference. The chief topics dealt with by the three panels were: (1) maintenance allowances; (2) housing accommodation; (3) university facilities. Toward the close of the Conference the panels assembled to study the proposals arising from the discussions and to prepare recommendations for submission to council.

Outlook of Dept. of Veterans Affairs

In his address at the opening session, Major-General Burns, representing the Department of Veterans Affairs, stressed the Government's faith in the youth of Canada and commended the goodwill and endeavours of all the student veterans. Regarding the present situation, he said:

"I believe that you should envisage the question of maintenance allowance as a

social problem. You are not the only ones affected in this respect. All the other veterans, as well as the producers in Canada, are faced with difficulties of re-conversion.

"You must guard against using individual and isolated cases as a base for any suggestion you may make in trying to solve your present problems. We are well aware of these cases and we feel they deserve sympathy. Nevertheless legislation must be applied for the majority and not for a few individuals."

During the last two days the Conference met in closed sessions. Housing accommodation and University facilities were debated; the coast-to-coast survey supplying most of the basic material for the discussions.

Among the recommendations in the resolutions passed for presentation to the Federal Government were the following:

- (1) An increase in monthly allowances of \$20 for single veterans and \$40 for married veterans.
- (2) Additional funds available through low interest loans to complete technical education beyond the prescribed course or to provide professional equipment after education has been completed.
- (3) The abolition of grant deductions for pensioned student veterans.
- (4) Increased period of time allowed on applications for all types of rehabilitation.
- (5) The institution of a Federal Government low cost and low rental building programs for all citizens.

A number of additional recommendations were listed to provide better facilities for educational, professional and vocational training.

* On January 19, as the LABOUR GAZETTE was going to press, a deputation of student veterans, headed by J. L. Starkey of McGill University, presented a brief based on the above resolutions to Walter Tucker, M.P., acting for Hon. Ian Mackenzie and Walter S. Woods, Deputy Minister of Veterans Affairs.

World Federation of Trade Unions Meets in Paris

IN accordance with the decision arrived at, at the first congress, which was held in London, England, in February, 1945, (L.G. April, 1945, p. 557), the Conference of the World Federation of Trade Unions was re-convened in Paris, France, on September 25. The sessions lasted for two weeks, concluding on October 8, 1945. Some 300 representatives of labour organizations of 56 countries attended. Canada was represented by Mr. Pat Conroy, Secretary-Treasurer of the Canadian Congress of Labour. The Trades and Labour Congress of Canada, which was represented at the London meeting, did not send a representative. Two delegates from the I.L.O. were present as observers.

The Conference was opened by M. Jouhaux, French labour leader who referred to French workers as "profound internationalists". At the opening session the following delegates were chosen Presidents to direct the sessions in rotation: M. Jouhaux, France; Sir Walter Citrine, Great Britain; M. Kuznetsov, U.S.S.R.; Mr. Sidney Hillman, U.S.A.; Senor V. Lombardo Toledano, Mexico, representing Latin America; Mr. Chu Hsueh-fan, China; and Herr Lindberg, Sweden. The last named was selected as representative of the smaller countries. The Administrative Committee, appointed at the London meeting, met in Paris during the week preceding the Conference under the chairmanship of M. Louis Saillant, of France, and prepared the agenda for the Conference.

Constitution of Federation

One of the most important and exacting tasks undertaken by the Conference was the consideration and final approval of the constitution of the new Federation. The basic draft had been prepared by the continuing committee set up by the London Conference at meetings held in Paris, Washington and San Francisco during the spring and summer months of 1945 for submission to the member organizations in time for study before the Conference in Paris in September. Following lengthy discussions it was given final approval at the session held on October 3, 1945.

As set forth in the constitution, the prime purposes of the Federation are as follows:

"(a) To organize and unite within its ranks the trade unions of the whole world, irrespective of considerations of race, nationality, religion or political opinion;

"(b) To assist wherever necessary, the workers in countries socially or industrially less developed, in setting up their trade unions;

"(c) To carry on the struggle for the extermination of all fascist forms of government and every manifestation of fascism, under whatever form it operates and by whatever name it may be known;

"(d) To combat war and the causes of war and work for a stable and enduring peace;

by giving full support to the establishment of a powerful and effective international organization armed with all necessary power to prevent aggression and maintain peace; by supporting the widest possible international co-operation in the social and economic spheres and measures for the industrial development and full utilization of the resources of the undeveloped countries; by carrying on a struggle against reaction and for the full exercise of the democratic rights and liberties of all peoples;

"(e) To represent the interests of world labour in all international agencies whose responsibility will be to solve the problems of world organization, resting upon agreements or conventions concluded between the United Nations, and in such other international bodies as may be decided upon by the World Federation of Trade Unions;

"(f) To organize the common struggle of trade unions of all countries against all encroachments on the economic and social rights of the workers and on democratic liberties;

for the satisfaction of the need of the workers for security of full employment; for the progressive improvement of wages, hours and working and living conditions of the workers;

for full and adequate social security to protect workers and their families against the hazards of unemployment, sickness, accident, and old age;

for the adoption of all other measures furthering the social and economic well-being of the workers;

"(g) To plan and organize the education of trade union members on the question of international labour unity and to awaken them to a consciousness of their individual responsibility for the realization of trade union purposes and aims.

Federation Principles

"In order to achieve these ends the World Federation of Trade Unions bases its work on the following principles:

(1) Full democracy within the trade unions of all countries and close collaboration among them;

(2) Permanent contact with affiliated trade union organizations, fraternal support and assistance to them in their work;

(3) Systematic exchange of information and experience in trade union work with the object of strengthening the solidarity of the international labour movement;

(4) Co-ordination of action by the workers' organizations for the realization of their international aims and decisions;

(5) Protection of the interests of the workers in emigration and immigration;

(6) Using every available means of making known and explaining the purposes for which the World Federation of Trade Unions is organized, the objectives which it seeks, its program for the achievement of these objectives and its decisions on specific issues."

Structure of W.F.T.U.

The structure of the World Federation of Trade Unions, as defined in the constitution, provides for: (1) the World Trade Union Congress; (2) the General Council; (3) the Executive Committee; (4) the Bureau of Management.

Composition and Duties of Congress.—

The Congress, consisting of delegates from each of the affiliated trade union organizations, was made the sovereign authority in the Federation. The Congress is to be convened biennially. However, provision was made for convening an extraordinary congress, if the General Council, or the Executive Committee so determines, or on the request of one-half of the affiliated union organizations.

Among the duties assigned to the Congress are the examination and discussion of the reports made by the Executive Committee; consideration of amendments to the constitution; the admission or expulsion of any trade union organization; the election of the General Council, Executive Committee and Auditors and to fix the place and date of the next Congress.

General Council.—

The General Council, which will meet once a year, will be the governing body of the Federation in the periods between Congress-Conferences. Each affiliated trade union or-

ganization is represented on the Council, the number of representatives being in diminishing proportion to the total membership of the organization represented.

Executive Committee.—

The Executive Committee, is composed of 26 members, elected by a general vote of the Congress. It was designed to represent the Congress as a whole and not any particular geographical or trade division. It is to be the governing body of the Federation in periods between meetings of the General Council, and will implement the decisions and resolutions adopted by the General Council and Congress.

Membership on the Executive Committee was distributed as follows: U.S.S.R., three; United States and Canada, three; Great Britain, two; France, two; Latin America and the West Indies, two; Near East and Middle East, one; China, one; Australasia, one; India and Ceylon, one; Scandinavia, one; Western Europe, one; Southern Europe, one; Central Europe, one; South-Eastern Europe, one; and Africa, one. In addition, three members were to be nominated by the Trade Departments and Louis Saillant, General Secretary, was made an ex-officio member.

Canada Represented on Executive

The Canadian delegate, Mr. Pat Conroy, in an address to the Congress urged that Canada by her part in the war had helped substantially to bring victory, "without which we would never be able to have this conference or this federation, here or anywhere else . . . No nation has the right to multiple representation on the Executive Committee", he declared. Continuing, he said: "The big powers have had stewardship of world affairs in their hands for a long time—the world as it is to-day is the result."

As a consequence to Mr. Conroy's efforts, the constitution was amended to permit of Canadian representation on both the General Council and the Executive Committee and he was duly elected as representative from Canada.

Composition of Federation

The World Federation of Trade Unions "shall be composed of the national trade union organizations which affiliate with it at the time of the final adoption of this constitution and such additional national trade union organizations as subscribe to the principles and objects set forth in this constitution . . ." Only bona fide trade union organizations shall be admitted to membership and, as a general rule, affiliation will be confined to a single national trade union centre from each country.

General Secretary

The constitution states that "the General Secretary shall be the principal administrative officer of the Federation of Trade Unions and shall be in general charge of the staff of the administration . . ." He was given authority, subject to ratification by the Executive Committee, to appoint departmental administrative secretaries. The headquarters of the Federation are to be in Paris, France.

Resolutions Considered at Conference

The Federation decided to strive "to increase industrialization and agricultural technical progress under democratic control in all backward countries, in order to free them from their present position of dependence and to improve the standard of living of their populations; and to see that this program is not used for monopolistic profiteering interests, native or foreign . . ."

Representatives of Latin-American countries introduced a resolution recommending that the Executive Committee make a careful study of effective measures "to destroy the control now exercised by international monopolies and trusts at the expense of the working people."

The World Congress renewed "in the clearest and most emphatic terms its claim to effective representation within the international Security Organization and in all international bodies engaged in the tasks of peace and reconstruction". It urged the Executive Committee and its affiliated organizations to continue to

work for representation in the General Assembly and the Social and Economic Council of the United Nations Organization. Further, the Executive Committee was directed "to secure for the W.F.T.U. an opportunity to express fully and effectively its views on the peace treaties . . . to take all necessary steps to secure representation for the W.F.T.U. in all other international bodies and commissions which may hereafter be established for the purpose of dealing with the problems of peace and reconstruction."

It was decided to send a commission to Germany to assist in reconstructing the trade union movement there. This decision was acted upon by the Executive Committee at once.

Other resolutions condemned fascism, racial discrimination and certain political developments in a number of countries, notably Spain, Argentina, Greece and some of the smaller nations of south-eastern Asia. The powers and authority to be exercised by the Executive Committee in the interim between the 1945 Congress and that to be held in 1947, were defined in some detail. The resolutions were fully considered at the plenary session of the Congress and submitted to the Executive Bureau for necessary action.

At the closing session of the Congress M. Jouhaux of France said: "The future is ours if we are conscious of our mission, ours if our solidarity is firm, ours if we remain attached to the ideals which are ours and must become the ideals of all humanity. It is in this hope and certainty that I close this first congress."

Decisions of National War Labour Board

DURING the month of December the National War Labour Board issued decisions in the following cases:—

Johnson and Higgins (Canada) Limited, Vancouver, B.C.

Irving Kline and Sons Limited, Edmonton, Alta.

La Fonderie de Plessisville and Le Syndicat Catholique des Employes de Fonderie de Plessisville.

Toronto Transportation Commission and National Organization of Civic, Utility and Electrical Workers, Branch No. 1.

Dominion Steel and Coal Corporation Limited (Sydney Steel Plant) and United Steelworkers of America, Local 1064.

Canadian Industries Limited, New Westminster Branch, B.C.

Cornwall Street Railway, Light and Power Company, Limited, and Amalgamated Association of Street Railway and Motor Coach Employees of America, Division No. 946.

Andrews Wire Works of Canada, Limited, and Federation of Industrial Workers, Local No. 2.

Canadian Car and Foundry Company, Limited, Fort William, Ont., and Aircraft Lodge No. 719, International Association of Machinists.

Canadian Industries Limited (Hamilton Works) and Canadian Industrial Workers Union, Local No. 2 (C.C.L.).

Union Gas Company of Canada, Limited (on behalf of Windsor Gas Company, Limited) and National Union of Natural Gas Workers, Local No. 1.

Printing Trades of Montreal.

Re: Johnson and Higgins (Canada) Limited, Vancouver, B.C.

Reasons for Decision

This is an appeal by the Company from a decision of the Regional War Labour Board for British Columbia, dated October 15, 1945. Leave to appeal was granted by the Regional Board.

The Company carries on the business of general insurance brokers. It requested the Regional Board to approve a range of rates for its departmental managers in its branch office at Vancouver. The low of the range requested is \$250 per month and because of this fact and of the fact that the applicant had failed to remove the presumption created by Section 15 (1) of Wartime Wages Control Order, 1943, the Regional Board declared the incumbents in the said occupational classification to be above the rank of foreman and subject to Wartime Salaries Order, P.C. 1549.

In all cases such as this one the onus is upon the applicant to provide the Regional Board with a detailed statement of the duties and responsibilities of the employee concerned and of his relationship to other employees. If the applicant so provides, the Regional Board will then be in a position to say whether the presumption has been removed. We have examined the Regional

Board's file in this case. After reading the material therein contained we must say that the Regional Board could not properly have reached any conclusion other than that expressed in its decision.

The submissions on appeal contain a statement of the duties and responsibilities of the Company's departmental managers in its Vancouver office. Their relationships to other employees are also clearly indicated. We are satisfied that the Company has now succeeded in removing the presumption above referred to and in consequence, the incumbents in the said position may be deemed to be of the rank of foreman or comparable rank and therefore subject to Wartime Wages Control Order, 1943.

The fact that other Regional Boards have assumed jurisdiction over the Company's departmental managers in their respective regions is not of itself to be regarded as a precedent binding on this Board. Our decision in this case, however, will have the effect of maintaining uniformity in the administration of the said Order as the same concerns the occupational classification involved in this appeal.

December 3, 1945.

Re: Irving Kline and Sons Limited, Edmonton, Alta.

Reasons for Decision

This is an application for leave to appeal and an appeal from a decision of the Regional War Labour Board for Alberta, dated August 29, 1945, which said decision was modified by that Board on September 19, 1945.

An investigation into the payroll records of the Company made it appear to the Regional Board that the Company had committed certain violations under the War-time Wages Control Order, 1943, in that it had, without authority, created the occupational classifications of "Engraver" and "Head Cashier-Bookkeeper" and further, that it had, without authority, established rates for that "Engraver" and from time to time increased the rates for the other classification. The Regional Board, quite properly, continued the investigation and as a result the Company applied to the Regional Board for permission to establish the occupational classifications and for approval for the wage rates being paid.

By its first decision the Regional Board dismissed the application and announced that it proposed to invoke the provisions of Section 39 of the Order and to declare to the Minister of National Revenue for disallowance as abnormal expenses, the amount of the wages which had allegedly been paid in contravention of the provisions of the Order and of previous Wage Control Orders. On September 19 the Regional Board, upon reconsideration of the case, approved the rates with effect from April 2, 1945. The limitation in the retroactive effect of the second decision still left a sizeable amount for disallowance as aforesaid.

The appellant takes the position that in respect of the occupational classifications in question it had previous authorized single rates within the meaning of the Wartime Wages Control Order, 1943, and, accordingly, the provisions of the Order have not been violated. It is upon this ground that the appellant asks this Board to review the Regional Board's decision and relieve it from the penalties imposed.

The expression "previous authorized single rate" is defined in Wartime Wages Control Order, 1943, and it includes any wage rate established under Wartime Wages and Cost of Living Bonus Order, P.C. 8253, or the Wartime Wages Control Order, P.C. 5963. Section 16 (1) of P.C. 5963 provided in effect that the rates paid by an employer on November 15, 1941, would be his "authorized rates". More-

over, the section provided that if on said date there was a temporary vacancy in any occupational classification in which there had been an incumbent at any time within four years prior to the anchor date, the employer was entitled to use the rate paid during such prior time as the "authorized rate" for that classification as and when the position was again filled.

The employer did have an engraver in its employ on November 15, 1941. The evidence is clear on this point. That engraver was, as of the anchor date, a part time employee. His wages for such part time service were equivalent to the rates now being paid for full time service. It has also been clearly indicated that within the four years prior to November 15, 1941, the employer did have a full time engraver and did pay that employee the rate which was approved by the Regional Board in its decision of September 19.

In respect of the engraver we find that the appellant was entitled to pay its engraver at the rate mentioned in the Regional Board's decision. That being so, it follows that the employer did not commit any violations of the Order in respect of this classification.

The problem concerning the head cashier-bookkeeper is quite different from that of the engraver. In this case the employee in said classification was, on November 15, 1941, a stenographer, and from the submissions made in this case it would appear that she continued in that classification until July 15, 1942, at which time the incumbent in the employer's occupational classification of "executive office manager" enlisted in the armed forces. Thereupon the stenographer was given added duties, some only of which had previously been assumed by the executive office manager.

The duties and responsibilities of the head cashier-bookkeeper are not the same as those previously assumed by the executive office manager. The occupational titles are different. Moreover, the rate of pay of the head cashier-bookkeeper is considerably below the rate established for the executive office manager.

It is our view that the appellant did not have in its employ on November 15, 1941, a head cashier-bookkeeper and had no authority to pay the rates which it set up from time to time for the incumbent in that position.

The rate approved by the Regional Board for the occupational classification of head cashier-bookkeeper has been paid by the employer since May 1, 1944. As above stated, the Regional Board made its decision retroactive to April 2, 1945. Having regard for all the circumstances in this case, and not

overlooking other decisions of the Regional Board made in similar cases, we think it fair and reasonable that the approval granted by the Regional Board should have effected from May 1, 1944.

The amount of wages paid to the employer's head cashier-bookkeeper prior to May 1, 1944,

in contravention of the Order and of Wartime Wages Control Order, P.C. 5963, shall be certified to the Minister of National Revenue for disallowance as abnormal expenses.

There will be a Finding and Direction accordingly.

December 3, 1945.

Re: La Fonderie de Plessisville and Le Syndicat Catholique des Employes de Fonderie de Plessisville

Reasons for Decision

With leave of the Regional War Labour Board for Quebec the Company now appeals from a decision of that Board dated August 13, 1945.

The decision was made in pursuance of an application by the Syndicate for a direction to increase wage rates by five cents an hour for all employees represented by the Syndicate. The Company countered with a proposal to adjust in varying units the wage rates for some of the classifications. The Regional Board, after having made a survey of the wage rates in the plant and studied the same in relation to those in other comparable plants, directed the Company, with effect from July 10, 1945, to increase the wage rates for moulders by five cents, and for all other employees excepting tinsmiths and certain apprentices three cents an hour, and for some of the apprentices two cents an hour.

After reading the appellant's brief and rebuttal herein and after hearing representatives of the Company as well as of the Syndicate, we have come to the conclusion that there was not sufficient evidence placed before

us to justify our finding that the Regional Board erred in its decision.

The Company on appeal entered a plea of inability to pay the increased rates. It filed certain general financial statements and two duly certified financial statements. These have been carefully examined. Notwithstanding such examination we are unable to find that the proposed increase in wage rates will be beyond the Company's ability to pay without increasing the price of his products. In order that any employer may avail himself of such a plea there must be placed before us clear and indisputable evidence on such issue. The evidence adduced in this case falls short of such standard.

The Syndicate entered a cross-appeal in which it requested this Board to vary the Regional Board's decision and direct the 5-cent increase. Little, if any, attempt was made by the Syndicate at the hearing to support its cross-appeal and we find that there is no evidence to justify our disturbing the Regional Board's decision.

The appeal and the cross-appeal is accordingly dismissed and there will be a Finding and Direction accordingly.

Re: Toronto Transportation Commission and National Organization of Civic, Utility and Electrical Workers, Branch No. 1

Reasons for Decision

This decision concerns appeals from two directions of the Regional War Labour Board for Ontario dated June 12, 1945, and August 24, 1945. The Commission, with leave of the Regional Board, appeals from the first direction and both parties join in an application for leave to appeal and an appeal from the second, the Regional Board having refused leave to appeal from the latter.

It seems appropriate to set forth the sequence of events culminating in these proceedings.

(1) On October 12, 1944, on an application by the Union representing approximately 75 employees in the electrical department of the Commission, the Regional Board granted a wage increase amounting to 5 cents per hour.

The Commission appealed that decision, and the National Board on March 15, 1945, set aside the decision of the Regional Board. In our "Reasons for Decision" issued at that time (L.G., April, 1945, p. 470) we stated, in part, as follows:

Apparently this wage increase was granted as a result of a comparison with the rates paid to similarly designated employees of the Bell Telephone Company and the Toronto Hydro Electric System. It seems to this Board, after careful consideration of the Union's argument, that in determining whether a "gross inequality" existed, the Regional Board should have restricted its comparison to employees of comparable units in the same industry, namely the local transportation industry.

(2) Following our decision of March 15, conferences were held in April between officers

of the Union and the Commission, at which a Conciliation Officer from the Department of Labour took part. At the hearing of this appeal it was stated that the object of those conferences was exploratory in the effort to find some common ground within the wage structure of the industry upon which to base comparisons, but no final agreement seems to have been reached nor was any further action mutually decided upon. Be that as it may, on May 2, 1945, the Union made a further application to the Regional Board as a new case, and the Regional Board proceeded to deal with the application and issued decision thereon, granting substantially the same increase to substantially the same occupational classification as those covered by their previous decision which had been set aside by the National Board. The Regional Board's decision was dated *June 12, 1945*, and is the decision from which the Commission separately now appeals.

The Regional Board's decision on the Union's application of May 2, 1945, having been announced on June 12, 1945, as stated, the Commission sought leave from the Regional Board to appeal to the National Board, which was granted on July 5, 1945.

(3) Shortly after leave to appeal was granted, the employees concerned took action which caused a tie-up of Toronto's transportation system. At the instance of His Worship the Mayor of Toronto an informal Arbitration Board was formed to investigate the dispute. In doing this the Mayor had the concurrence of the Commission and of the Union and both agreed to be bound by the findings of the Arbitrators to the extent that a joint application to implement those findings, would be made to the Regional Board and, if necessary, to the National Board by way of appeal.

The Arbitrators brought in a report which was unanimous insofar as it contained a recommendation for wage adjustments which varied from nothing to six cents per hour as between different classifications. The report also contemplated some breakdown or reclassification of the existing job titles of the employees concerned. The proposed new schedule of wage rates was to be contingent upon a discontinuance of payment of one-and-a-quarter time for straight shifts on Sunday and one-and-a-half time for straight shifts on statutory holidays.

Pursuant to their undertaking, the Commission and the Union then applied to the Regional Board for permission to implement the recommendations of the arbitrators. The Regional Board dismissed the application by its Finding and Direction of August 24, 1945. At the same time the Board indicated that its decision of June 12, 1945 must stand. It

is in respect of the August 24 decision that the joint appeal is made.

In considering this case we have had the benefit of the reports of the arbitrators which form part of the record. In the "Award and Reasons" signed by two of the Arbitrators, reference is made to certain other classifications of tradesmen in the Commission's own employ whose wage rates are cited as furnishing criteria for the arbitrators' finding. However it is noted that the Arbitrators placed much emphasis on wage rates paid to skilled mechanical workers by certain employers in other industries. The report advances these as the principal grounds within the pertinent provision of the Wartime Wages Control Order for the wage increases which the arbitrators recommended for the employees involved in this series of applications and appeals. We had already intimated that we did not consider the wage rates paid by the very employers named in the arbitrators' report, as being admissible to establish such grounds.

During the course of all our deliberations on these issues, we have had knowledge of the fact that hourly wage rates of the employees in the electrical department have, as have the wage rates of all others of the Commission's employees, been supplemented by a special "abnormal traffic" bonus. The amount of this bonus is currently four cents per hour, it has been as high as five cents an hour. It is not clear whether the arbitrators were appraised of the existence of this special bonus.

Charged as the War Labour Boards are with the sole responsibility for administering the Wartime Wages Control Order and adjudicating within its provisions under the policy of wage stabilization, we cannot agree that wages paid in other industries even in the same locality constitute a sound basis for deciding that a condition of "gross inequality or gross injustice" exists. If the basis of comparison chiefly relied on by the majority report of the arbitrators were to be generally adopted in dealing with applications for wage increases, the result, in our opinion, could only be to create still greater inequities in the wage structure. It is obvious that this would defeat the purpose of wage stabilization.

Our views on admissible comparisons in respect of wage rates of the employees of the Commission represented in these appeals have as mentioned above already been clearly set forth in our "Reasons for Decision" of March 15, 1945. We see no valid reason for departing from the principle so enunciated.

There remains the question of whether the wage rates of employees of the electrical department are such as to constitute a gross

injustice or gross inequality within the wage structure of the Commission itself, or for that matter, of the urban transit industry in Canada.

The statement has been made to us and not denied that wages paid by the Commission are as high as those paid in any similar operation. It, therefore, becomes necessary to examine the wage scale of the Commission to ascertain if such inequalities exist. This we have done. Out of approximately 3,300 hourly rated employees of the Commission only some 24 receive higher wage rates than the highest paid hourly rated classifications of these electrical workers. The weighted average rate for the electrical workers shows to advantage when compared with the weighted average rate for approximately 533 of the Commission's other employees in what may be considered as tradesmen categories.

Reference was made at the hearing to a job evaluation survey of the electrical department which the Commission had had carried out by a firm of industrial engineers on or about May last. No such survey was conducted concurrently for the other departments operated by the Commission.

The Regional Board and the arbitrators appear to have had knowledge of the contents of the industrial engineers' report before arriving at their decisions and recommendations, but from the record we cannot find that

any weight was attached to it in reaching their conclusions.

We have been considerably impressed with the comment of the industrial engineers that present job classifications in the electrical department are too broad and may contain within a single classification jobs of widely differing duties and responsibilities, possibly calling for different rates of pay. However that may be, the appeals presently before us are not based on that survey, and, in any event, the National Board could not take a job evaluation of only one department into consideration as establishing properly integrated wage rates in relation to other departments of the same employer unless or until a job evaluation survey had been completed for the operation as a whole.

From our own analysis of the wage rates of the electrical workers *on the basis of their present classifications* in relation to the wage rates of other trades in the employ of the Commission, we cannot find that a "gross injustice or a gross inequality" exists, and we must, therefore, allow the Commission's appeal from the decision dated June 12, 1945, of the Regional War Labour Board for Ontario, which will be set aside, and for the same reason must dismiss the joint appeal from the decision of August 24, 1945.

Finding and Direction accordingly.

December 10, 1945.

Re: Dominion Steel and Coal Corporation Limited (Sydney Steel Plant) and United Steelworkers of America, Local 1064

Reasons for Decision

On January 2, 1945, the Union made application to the Regional War Labour Board for Nova Scotia for a direction requiring the Company to inaugurate a vacation with pay plan, which plan was substantially in conformity with D.B. 17. Prior to that date the parties had been negotiating on the issue but had not reached agreement. For good and sufficient reasons the Regional Board requested the parties to resume negotiations and endeavour to reach agreement. The negotiations terminated in an agreement in writing dated March 3, 1945, and a copy of that agreement was filed with the Regional Board.

On March 7 the Regional Board approved the agreement and provided that it should have effect on January 1, 1945.

Between January 1 and March 7 approximately 300 persons left the employ of the Company. The Company contends that those persons should not receive benefits under the vacation plan because at the time of termina-

tion of service the vacation plan was not a condition of employment. That contention was transmitted to the Regional Board and an interpretative ruling was requested of that Board. On July 11 the Regional Board issued a ruling which, in effect, said that the vacation plan applied to the employees in the service of the Company on January 1, 1945. With leave of the Regional War Labour Board the Company now appeals from that ruling.

It is our view that the interpretation which the Regional Board gave in this case is the proper one. Our understanding is that whenever a direction has retroactive effect it shall be construed as though it had actually been passed on the day named as the retroactive date. That being so, the direction in this case should be read so as to affect persons in the employ of the Company on the effective date of the direction.

The appeal will be dismissed and there will be a Finding and Direction accordingly.

December 7, 1945.

Re: Canadian Industries Limited, New Westminster Branch, B.C.

Reasons for Decision

With leave of the Regional War Labour Board for British Columbia the Company appeals from the decision of that Board dated September 18, 1945, in and by which the Company's District Sales Manager and Salesmen III at its New Westminster Branch were declared to be above the rank of foremen and subject to Wartime Salaries Order, P.C. 1549.

The Company maintains several branch offices in Nova Scotia, Quebec, Ontario, Manitoba and British Columbia. In each branch office there is a District Manager. Other employees, including the District Sales Manager and Salesmen III, in those branches are engaged in selling the Company's products.

The New Westminster Branch is one of the smaller of such outlets of the Company. The District Sales Manager of that branch reports to the Branch Manager. He has two salesmen under his supervision and he is also actively engaged in selling. The sales policy of the Company is formulated at Head Office. The incumbent in the said position is not allowed to deviate from that policy unless

with permission from Head Office or, in some cases, from the Branch Manager.

In our view the Company has succeeded in rebutting the presumption created by Section 15 (1) of P.C. 9384 as it concerns the District Sales Manager, for which classification the Company proposes to pay rates within a range, the low of which is \$250 per month. We are now in a position to declare the incumbent to be of the rank of foreman. It should be noted in passing that all other Regional Boards concerned have assumed jurisdiction over this occupational classification.

Having disposed of the status of the District Sales Manager it follows that the Company's Salesmen III, who are responsible to the District Sales Manager, must be below the rank of foreman. Incumbents in such position handle normal sales and service assignments. The numerals following the word in the title merely designate the grade of salesman.

The appeal is allowed and there will be a Finding and Direction giving formal effect to this decision.

December 10, 1945.

Re: Cornwall Street Railway, Light and Power Company, Limited, and Amalgamated Association of Street Railway and Motor Coach Employees of America, Division No. 946

Reasons for Decision

With leave of the Regional War Labour Board for Ontario, the Company appeals from part of a decision of that Board dated September 13, 1945. The parts of the said decision which are at issue in this appeal concern directions

- (a) to increase by .03c an hour the wage rates and ranges of rates for the Company's several occupational classifications; and
- (b) to pay time and one-half the regular rates for work done on Sunday, if Sunday is not part of the standard work week for any employee concerned, or in the event that Sunday is part of the standard work week of that employee, the premium rate should apply for work done on the seventh consecutive day.

On September 28, 1944, the Regional Board directed the Company to increase wage rates for its employees by .03c an hour. In this appeal, it was argued on behalf of the Company that the Regional Board, when dealing with the wage rates in 1944, rectified all gross injustices or inequalities which then existed and that nothing has transpired since that date which would have the effect of de-

veloping any further injustices or inequalities. The Counsel for the Company further argued that the Board having previously dealt with the wage rates for the employees concerned under Wartime Wages Control Order, 1943, P.C. 9384, is now without jurisdiction to deal further with the same.

This argument has been presented to us in other cases. It is recognized that P.C. 9384 limits the actions of a War Labour Board in such cases. Under that Order a Board may authorize or direct an increase in wage rates *to the extent* necessary to rectify a gross injustice or gross inequality. It is a question of fact in each case as to whether a War Labour Board has in any decision, completely rectified injustices or inequalities in wage rates.

From the evidence before us in this case, it would appear that the Regional Board, in directing the .03c increase on September 13, 1945, concluded that its 1944 decision did not completely rectify the gross injustice or gross inequality which existed prior to the 1944 decision and, therefore, deemed it necessary and advisable to take a second step to complete the rectification.

This Board finds that there was evidence before the Regional Board upon which it could make the direction contained in its Order of September 13, 1945, and this Board further finds that in reaching the said decision, the Regional Board did not act on any wrong principle and, therefore, the decision on the point in question should not be disturbed.

The second point in this appeal concerns punitive rates for work performed on Sunday, if that day is not part of an employee's work week or if Sunday is part of an employee's standard work week, then the premium rate, according to the Regional Board's decision, should apply to work performed on the seventh consecutive day.

The Company operating a public utility is required to maintain the services on every day in the week. It is not a large organization

and, consequently, must exercise considerable ingenuity to provide the such services having regard for the limited number of its tram car operators. It appears that the Company and the representatives of the employees agreed upon a certain schedule of runs. That schedule provides for the equivalent of one day off for each week in the year. The present working conditions require the Company to pay punitive rates to each employee who is called upon to work on any day which is assigned as his day of rest. Having regard for all the circumstances in this case, we are of the opinion that the present arrangements are fair and reasonable. Accordingly, we allow the appeal on this point.

There will be a Finding and Direction accordingly.

December 7, 1945.

Re: Andrews Wire Works of Canada, Limited and Federation of Industrial Workers, Local No. 2

Reasons for Decision

On July 6, 1945, the Regional War Labour Board for Ontario directed the Company to increase hourly and guaranteed wage rates by $7\frac{1}{2}$ per cent and piece-work rates by 5 per cent, all with effect from November 15, 1944. With leave of the Regional Board the Company appeals from that decision.

Upon the motion of the Union, the Regional Board on further consideration of the original application issued a Supplementary Finding and Direction dated September 15, 1945. In and by that supplementary decision the Company was directed to pay punitive rates for overtime after forty-eight hours per week and for work performed on certain statutory holidays. The Regional Board fixed September 1, 1945, as the effective date for the second decision. The Union appeals from that decision and seeks to have the effective date thereof

coincide with that of the first decision, namely, November 15, 1944.

Appellants who come before this Board should realize that the onus is upon them in every case to show where the Regional Board erred in its decision in that case. It is our view that such onus is much greater even than that which Wartime Wages Control Order, 1943, imposed upon the applicant in his case before the Regional Board.

We are entitled to assume and do assume that the Regional Board in dealing with this case proceeded on proper principles with full realization of the purposes and intent of the said Order. The submissions in this case fall short of indicating that the Regional Board committed any fundamental error in either of its decisions above referred to.

We dismiss both appeals. Finding and Direction accordingly.

December 13, 1945.

Re: Canadian Car and Foundry Company, Limited, Fort William, Ont., and Aircraft Lodge No. 719, International Association of Machinists

Reasons for Decision

With leave of the Regional War Labour Board for Ontario the Union appeals from a decision of that Board dated May 23, 1945. The Union had applied to the Regional Board for a direction requiring the Company to revise certain grades of classifications of production workers, increase rates for certain journeymen and establish ranges of rates for tool makers, die makers, kirksite die makers and pattern makers. The Regional Board declined to revise the grades aforementioned or to increase the journeymen's rates. It allowed in part the

request for ranges for the above-named occupational classifications.

The leave granted by the Regional Board is dated October 9, 1945, four and one-half months after the decision in question. In granting such leave at the time it did, we are obliged to observe that the Regional Board paid scant attention to the provisions of Section 11 of Wartime Wages Control Order, 1943. Notwithstanding the Regional Board's error on this point of procedure we consented to hear the appeal when certain special circumstances in the case were made known to us.

At the time when the union's application was made to the Regional Board, the Company was engaged in full scale operations in the manufacture of aircraft. We are told that those operations have ceased. The Company is now converting its plant to one for the manufacture of a product intended for the domestic market. Employment in the Company's plant is now at a very low point. For those reasons the submissions on the appeal centred around conditions and comparisons which, for the most part, no longer exist.

We are not disposed to disturb the Regional Board's decision concerning the revision of the grades of production workers or the increase in the rates requested for certain

journeymen. We think, however, that the Regional Board would have been justified in providing a range of \$1 to \$1.20 per hour for tool makers, die makers, kirksite die makers and pattern makers. The submissions before us, at any rate, show that the range (\$1-\$1.10) directed by the Regional Board is not broad enough to enable the parties to rectify gross injustices or inequalities in respect of the more skilled employees in those occupational classifications. We fix the range for the employees in question at from \$1 to \$1.20 per hour.

The appeal is allowed to the extent indicated above and there will be a Finding and Direction accordingly.

December 13, 1945

Re: Canadian Industries Limited (Hamilton Works) and Canadian Industrial Workers Union, Local No. 2 (CCL)

Reasons for Decision

On May 22, 1945, the Union applied to the Regional War Labour Board for Ontario for a direction requiring the Company to pay time and one-half to shift workers for work performed by them on Victoria Day and Civic Holiday. On August 27, 1945, the Regional Board approved the application and directed the Company to pay premium rates to those workers for work done on either or both of said holidays.

With leave of the Regional Board the Company now appeals from that decision.

There is attached to the Company's submissions in this appeal a copy of a collective agreement between the Company and the Union, which said collective agreement became effective May 17, 1945, and which is to continue in effect for one year from said date. The agreement has been in effect at all times material to this case. It makes provision for the payment of punitive rates for work done on New Year's Day, Good Friday, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day. Nothing is said about Victoria Day or Civic Holiday.

We think that when parties solemnly enter into a collective agreement they should be prepared to abide by the terms thereof, otherwise there would seem to be little point in having such an agreement in existence. In this case, and within 5 days from the effective date of the agreement, steps were taken which led to a direction which virtually changed the agreement, contrary to the expressed views of one of the contracting parties.

There is no question of misunderstanding of the terms of the agreement. It was admitted that the issue involved in this appeal was discussed between the parties prior to the date of the agreement. From this we can only infer that the issue was then abandoned so as to enable the parties to complete negotiations and put in writing matters upon which agreement had been reached.

Having regard to the foregoing it would not be fair or reasonable to direct the Company to pay the punitive rates aforementioned. There will be a Finding and Direction allowing the appeal and revoking the said Finding and Direction of the Regional Board.

December 14, 1945

Re: Union Gas Company of Canada, Limited (on behalf of Windsor Gas Company, Limited) and National Union of Natural Gas Workers, Local No. 1

Reasons for Decision

An appeal by the Company from a decision dated August 1, 1945 of the Regional War Labour Board for Ontario who, on an application for a general increase of 5 cents per hour, directed for certain classifications an increase of 5 cents in the minimum and 4 cents in the maximum of the ranges of wage rates and refused any increase to the other

classifications represented by the union. The union cross-appeals and asks this Board to extend the increase directed by the Regional Board to all classifications.

The application to the Regional Board was made by the union for the purpose of obtaining, in effect, the equivalent of the increase in the cost-of-living bonus which had been denied by this Board in its decision of October

26, 1943 (L.G., November, 1943, p. 1494). In fact, the opening paragraph of the said application so stated in other terms.

The decision of the Regional Board is evidently unsatisfactory because no reason appears why certain classifications were increased while others were not. Having considered the matter in the light of the Wartime Wages Control Order, 1943 (P.C. 9384), and in view of the main purpose of that Order which was to stabilize the wage structure in Canada,

except in cases where "gross injustices" or "gross inequalities" were shown to exist, this Board has come to the conclusion that changes in the schedule of wage rates paid by this Company at this time be brought about by collective bargaining rather than by mandatory order of a War Labour Board. Consequently, there will be a Finding and Direction allowing the appeal and dismissing the cross-appeal.

December 20, 1945.

Re: Printing Trades of Montreal

Reasons for Decision

In 1941 and pursuant to the provisions of the Collective Agreement Act of the Province of Quebec, employing printers and representatives of employees in the printing industry in part of the Province of Quebec negotiated a collective labour agreement. The agreement was promulgated by a decree issued by the Minister of Labour of that Province on April 24, 1941, as No. 987.

The decree, *inter alia*, divided that part of the province affected into five zones. They are numbered I, II, II-A, III and III-A. Minimum wage rates in varying amounts were established in each zone for each occupational classification in the industry.

The decree designated as employers in Zone II, those in certain named cities and towns who confine their operations to job printing, and in Zone II-A those in the same cities and towns who, in addition to carrying on job printing, publish one or more weekly newspapers. The minimum rates in Zone II-A are lower than those in Zone II. Zones III and III-A comprise the balance of the territory concerned not specifically included in the other zones. The distinction between employers in Zones III and III-A corresponds with that existing between employers in Zones II and II-A. Likewise the *minimum* rates set in Zone III are higher than those in III-A.

The appellants' submissions were directed to Labour Board for Quebec for an order to increase the minimum rates in Zone II-A to the level of those in Zone II and in Zone III-A to the level of those in Zone III. The Regional Board dismissed the application but granted leave to appeal to this Board.

Evidence was tendered to show that the degree of skill required of an employee in a given occupational classification in either Zone II-A or III-A is precisely the same as that

required of an employee in the same occupational classification in Zone II or III, respectively. Further it was argued that since the *minimum* rates for Zone II-A employees were lower than those for Zone II employees, a gross inequality exists in respect of those minimum rates affecting Zone II-A employees. The same argument was made in support of the Zone III-A employees.

The appellants' submissions were directed to the question of inequality in the *minimum* rates as between zones. We pointed out during the hearing and now repeat, that the fixing of minimum rates, as such, forms no part of the functions of this Board. We are required to deal with *actual* rates. It was admitted by the appellants that the rates actually being paid are above, and in many cases considerably above, the minima provided. No attempt, however, was made to prove any gross injustice or inequality in respect of any wage rates actually paid. Accordingly we are unable to give any consideration to that problem.

Nothing in these reasons shall be construed as an expression of opinion concerning the propriety of subdividing Zones II and III. There must have been some good and valid reason behind the action taken by the parties and the provincial authorities when they subdivided these zones. If any change is to be made therewith the parties and those authorities should make them. It must be understood, however, that if any adjustment of the minimum rates make it necessary for an employer to increase wage rates in excess of the rate mentioned in Section 23 of the Order, then and to the extent of such excess approval by the Regional Board will be required.

We confirm the decision of the Regional Board and dismiss the appeal. A Finding and Direction will issue accordingly.

December 1, 1945.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with proceedings under the National War-time Labour Relations Regulations and with proceedings under the Conciliation and Labour Act and other legislation.

The articles on strikes and lockouts, formerly included in this section, may be found elsewhere in this issue.

Under the Wartime Labour Relations Regulations, P.C. 1003, the Government has extended its jurisdiction over employer-employee relations which are normally exclusively within the provincial field to the extent considered necessary to cover adequately employers and employees in industries "essential to the efficient prosecution of the war," but without attempting to include other industry which has not a direct bearing on war production. In so far as these latter industries are concerned, each province can make its own decision as to whether or not they shall be brought under the Regulations.

Agreements have been made under the Regulations between the Dominion and every province except Alberta and Prince Edward Island providing for the setting up of provincial agencies for the administration of the Regulations.

The work of the Wartime Labour Relations Board (National) is here described in two separate articles. The first deals with applications made by unions for certification and their disposition by the Board; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also carried on by the Industrial Relations Branch of the Department of Labour under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned; and under P.C. 4020.

Applications for Certification Under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Board (National) met for two days during the month of December. During this period the Board received nine applications, held three hearings, issued two certificates designating bargaining representatives, ordered one representation vote, allowed the withdrawal of two applications and rendered decision in two appeal cases.

Certificates Issued

Following an investigation of the application by an officer of the Board, bargaining representatives as stated were certified in the under-noted case:

Mrs. Leila A. Shore, Sadie Harper, Marion Smith, Sylvana Borden, Evelyn B. Walker and Miss Helen Boutenheimer and the Traffic Employees' Association for cashiers (dining service), C.O. clerks (classes I, II and III), charwomen, cleaners, cooks, dishwashers, junior

dietitians, junior observers, junior operators, junior supervisors, matrons, central office messengers, observers, operators, operators (P.B. X), operators (pay station), senior operators, senior supervisors, storekeepers (dining service), student operators, supervisors and supervisors (P.B.X.) employed by the Bell Telephone Company of Canada, Montreal, P.Q.

Following an investigation, a public hearing and a representation vote ordered by the Board, bargaining representatives as stated were certified in the under-noted case:

Messrs. Georges Fortin and Gerard Poulin and the *Canadian Brotherhood of Railway Employees and Other Transport Workers* for employees of *La Traverse de Levis Limitee*, Quebec, P.Q. Captains, 2nd captains and administrative personnel were excluded from the bargaining unit. (See also *LABOUR GAZETTE*, December, 1945, page 1791, and *Labour Law* section, this issue.)

Representation Vote Ordered

Following a hearing on an application for certification of bargaining representatives submitted by the *Brotherhood of Railroad Trainmen* the Board ordered that a representation vote be taken among the road train conductors employed by the *Temiskaming and Northern Ontario Railway, North Bay, Ontario*. The name of the *Brotherhood of Railroad Trainmen* and that of the *Order of Railway Conductors*, the applicant union and intervener respectively, were included on the ballot, which resulted in a majority for the *Order of Railway Conductors*.

Applications for Certification Withdrawn

1. *International Brotherhood of Electrical Workers, Regional Council No. 2* and the *Canadian Pacific Railway Company, Montreal, P.Q.* (Electrical Workers, Montreal Terminals, etc.) (L.G. Oct. 1945, p. 1459).—On the request of the General Chairman, *Canadian Pacific Railway Lines, International Brotherhood of Electrical Workers*, the application for certification of bargaining representatives was withdrawn.

2. *International Brotherhood of Electrical Workers, Regional Council No. 2* and the *Canadian Pacific Railway Company Montreal, P.Q.* (Electrical Workers and Helpers in stations and office buildings) (L.G. Oct. 1945, p. 1459).—On the request of the General Chairman, *Canadian Pacific Railway Lines, International Brotherhood of Electrical Workers*, the application for certification of bargaining representatives was withdrawn.

Applications for Certification Under Investigation

1. *International Longshoremen's and Warehousemen's Union, Local 501* on behalf of checkers employed on the Vancouver wharf by the *Great Northern Railway Company, Vancouver, B.C.*

2. *International Brotherhood of Electrical Workers, Regional Council No. 2*, on behalf of Electrical Workers and Electrical Helpers on the entire System of the *Canadian Pacific Railway Company, Montreal, P.Q.*

3. *Canadian Brotherhood of Railway Employees and Other Transport Workers* on behalf of truck drivers handling freight and delivering for *Canadian National Cartage Services, Canadian National Railways, Montreal, P.Q.*

4. *Brotherhood of Railroad Trainmen* on behalf of sleeping car conductors, parlour car conductors and parlour car attendants *Canadian Pacific Railway Company, Montreal, P.Q.*

5. *Order of Railway Conductors* on behalf of the road train conductors of the *Toronto, Hamilton and Buffalo Railway Company, Hamilton, Ontario*.

6. *Accounting Employees Association* on behalf of the employees in the accounting departments, including clerical, technical and office personnel of the *Bell Telephone Company of Canada, Montreal, P.Q.*

7. *Canadian Brotherhood of Railway Employees and Other Transport Workers* on behalf of certain employees of the *Chateau Frontenac Hotel, Canadian Pacific Railway Company, Montreal, P.Q.*

8. *Canadian Seamen's Union, Pacific Coast District*, on behalf of the unlicensed crew members of vessels operated by *W. F. Gibson and Sons, Vancouver, B.C.*

9. *Canadian Seamen's Union, Pacific Coast District*, on behalf of the unlicensed crew members of vessels operated by *Badwater Towing Company Limited, Vancouver, B.C.*

Decisions of Board in Appeal Cases

On December 4, the Board heard argument on the appeal of *Snyders Limited, Waterloo, Ont.*, from a decision of the Ontario Labour Relations Board directing that a vote be taken among certain employees of the Company to determine whether or not they wish to be represented by the *National Union of Aircraft, Furniture Workers and Allied Crafts*. The main point of appeal was that the Union did not have a majority of the employees affected as members at the time of election of bargaining representatives. The Union contended, in reply, that though all cards submitted to the Ontario Labour Relations Board bore a later membership date the Union had been authorized to act on behalf of the employees at an earlier date. Following a hearing, the Board decided that the vote ordered by the Ontario Board would be taken provided that a declaration or declarations were filed on or before December 9, 1945, with the Chief Executive Officer of the Board indicating that authorizations to elect or appoint bargaining representatives had been signed prior to July 30, 1945. If the declaration or declarations were not received, leave to appeal would be allowed, the appeal to be upheld and the vote cancelled. The Union being unable to comply satisfactorily with the requirements of the Board's decision, leave to appeal was allowed, the appeal upheld, and the vote scheduled for December 10, 1945, was cancelled.

2. An application for leave to appeal and appeal from decision of the Minister of Labour of British Columbia was submitted to

the National Board by the *Boilermakers and Iron Shipbuilders Union, Local No. 1*, employees of *West Coast Shipbuilders, Limited, Vancouver, B.C.* In a vote ordered by the British Columbia Department of Labour, the Boilermakers and Iron Shipbuilders Union, Local No. 1, obtained a majority of the ballots cast but failed to secure a majority of the eligible voters. Consequently, the Union was refused certification by the provincial authorities. Following a hearing, the Board reached the decision that the appeal be

dismissed for the reason that the application before the British Columbia authorities did not have the support of a majority of the employees affected (employees eligible to vote) as required by the Wartime Labour Relations Regulations. Formal reasons for judgment were not issued as the point of appeal had been dealt with by the Board in the following cases: (1) Vivian Diesles and Munitions, Vancouver, B.C.; (2) Packard Electric and Philco Corporation; (3) Wright-Hargreaves and Sylvanite.

Conciliation Proceedings Under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Regulations provide conciliation machinery to attempt settlements of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the Minister of Labour by the Wartime Labour Relations Board (National) or by the Provincial Boards in their respective jurisdictions. A Conciliation Officer is then appointed to confer with the parties and endeavour to effect an agreement. If the Conciliation Officer is unable to bring about settlement of the matters in dispute and reports that in his view an agreement might be facilitated by the appointment of a Board of Conciliation, a Board is then established by the Minister of Labour. The duty of such a Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

Assignment of Conciliation Officers

Conciliation Officers have been assigned to confer with the parties in an attempt to effect an agreement in the following cases:—

Phillips Electrical Works, Limited, Brockville, Ont., and Local 510, United Electrical, Radio and Machine Workers of America—George Fenwick, Conciliation Officer.

Robbins and Myers Company of Canada, Limited, Brantford, Ont., and International Union, U.A.A.A.I.W.A. (UAW-CIO)—George Fenwick, Conciliation Officer.

Canadian Industries, Limited, Toronto, Ont., and District 50, United Mine Workers of America—William Dunn, Conciliation Officer.

Agreements Facilitated by Conciliation Officers

In the following cases reports were received from Conciliation Officers indicating the suc-

cessful completion of negotiations and the signing of an agreement:—

Sunshine, Waterloo Company, Limited, Waterloo, Ont., and Local 1719, International Association of Machinists—H. Perkins, Conciliation Officer.

Remington Rand, Limited, Hamilton, Ont., and Lodge 1772, International Association of Machinists—F. J. Ainsborough, Conciliation Officer.

Marshall-Wells Company, Limited, Winnipeg, Man., and Local No. 4, Wholesale Warehouse Employees' Union, (C.C.L.)—Thos. Williams, Conciliation Officer. Case withdrawn.

Park Steamships, Limited, Montreal, P.Q., and Division 159, Commercial Telegraphers' Union—R. Trepanier, Conciliation Officer. Case withdrawn.

Canadian Ohio Brass Co. Ltd., Niagara Falls, Ont., and Local 819, International Union Mine, Mill and Smelter Workers—F. J. Ainsborough, Conciliation Officer.

Boards Established

During December three Boards of Conciliation were established but not fully constituted:

Hudson's Bay Company, Incorporated, Victoria, B.C., and Local No. 279, Retail Clerks' International Protective Association.

John East Iron Works, Limited, Saskatoon, Sask., and Local 3493, United Steelworkers of America.

Prince Rupert Dry Dock and Shipyard, Prince Rupert, B.C., and Local No. 4, Boilermakers' and Iron Shipbuilders' Union of Canada.

Boards Fully Constituted

During December five Boards of Conciliation were fully constituted:—

Welding Shop and Engineering Company, Limited, Vancouver, B.C.—The Board of Conciliation established to deal with a dispute between the Welding Shop and Engineering

Company, Limited, and Local No. 1, Boilermakers' and Iron Shipbuilders' Union, was fully constituted on December 14, 1945, with the appointment of Clarence Darling, Vancouver, B.C., as Chairman of the Board, by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Messrs. R. L. Norman and L. Anderson, also of Vancouver, appointed on the nomination of the employer and employees respectively.

Schultz Die Casting Company, Wallaceburg, Ont.—The Board of Conciliation established to deal with a dispute between the Schultz Die Casting Company and Local 251, International Union, U.A.A.A.I.W.A. (UAW-CIO) was fully constituted on December 15, 1945, with the appointment of His Honour Judge M. A. Miller, Sarnia, Ont., as Chairman of the Board, by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board. Mr. Frank Ellis, Windsor, Ont., and Mr. Alan Adamson, Toronto, Ont., were appointed on the nomination of the employer and employees respectively.

MacLean and Weir, Limited, Vancouver, B.C.—The Board of Conciliation established to deal with a dispute between MacLean and Weir, Limited, and Local No. 1, Boilermakers' and Iron Shipbuilders' Union, was fully constituted on December 14, 1945, with the appointment of Clarence Darling, Vancouver, B.C., as Chairman of the Board, by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Messrs. R. L. Norman and L. Anderson, also of Vancouver, who were appointed on the nomination of the employer and employees respectively.

Willards Chocolates, Limited, Toronto, Ont.—The Board of Conciliation established to deal with a dispute between the Willards Chocolates, Limited, and Local 264, Factory Bakers' Union, was fully constituted on November 28, 1945, with the appointment of His Honour Judge Egerton Lovering, Toronto, Ont., as Chairman of the Board, by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board. Mr. E. M. Dillon, and Mr. H. Orloff, also of Toronto, were appointed on the nomination of the employer and employees respectively.

Andrews Wire Works of Canada, Limited, Watford, Ont.—The Board of Conciliation established to deal with a dispute between Andrews Wire Works of Canada, Limited, Watford, Ont., and Local No. 2, Federation of Industrial Workers' Union, was fully constituted on February 22, 1945, with the appointment of His Honour Judge J. J. Coughlin, Sandwich, Ont., as Chairman of the Board by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Messrs. G. E. Burnson and H. Orloff, both of Toronto, appointed on the nomination of the employer and employees respectively.

The unanimous report of the Board was received on March 17, and was printed in the April issue of the *LABOUR GAZETTE*.

At the request of the Minister of Labour for Ontario, the Board was reconvened on December 1, 1945, under Section 31 (9) of the Regulations, in order to clarify its original report in relation to the subsequent attitude of the Company.

Board Reports Received

PURSUANT to the Wartime Labour Relations Regulations, Boards of Conciliation are allowed 14 days in which to make their report. This can be extended, either by the

Minister, or by mutual consent of the representatives of the parties concerned. The following reports were received by the Minister of Labour during December:—

Report of Board in Dispute between Canadian Industries, Limited, Nobel, Ont., and Local 13031, United Mine Workers of America, Chemical Division, District 50

On December 31, 1945, the Minister of Labour received the report of the Board of Conciliation, the personnel of which was as follows:—Hon. Mr. Justice W. D. Roach, Chairman, Toronto, appointed by the Minister on the joint recommendation of the other two members of the Board, Messrs. Gerald H. Brown, of Ottawa, and Herbert Orloff, of Toronto, appointed on the nomination of the employer and employees respectively.

Report of Board

To the Honourable the MINISTER OF LABOUR, Ottawa:

The Board of Conciliation established by you in this matter hereby reports as follows:

Prior to your Board meeting with the parties, the parties furnished each member of the Board with a brief. Then on December 20, the board met with the representatives

of the parties at the City of Toronto. The employer was represented by Mr. E. G. Taylor, Assistant Manager of Industrial Relations and Mr. R. B. Carpenter, Works Manager at the Nobel plant. The employees were represented by Mr. Silby Barrett, District representative of the Union, Mr. William Renton, Assistant Director of the Union for District No. 50, and Mr. Marcus Nichols, President of the Local Union.

The Company at its plant at Nobel is engaged in the manufacture and sale of explosives, which are used largely in the mining industry.

The number of employees who will be affected by the collective bargaining agreement is approximately 124. Of these it is said 105 employees are presently members of the union in good standing.

Commencing in or about November, 1934, and extending to in or about June, 1945, there was a works council in this plant consisting of nine members, seven of whom were elected from the employees and two representing the employer. There was not in fact at any time a collective bargaining agreement between the Company and its employees, but from time to time problems affecting employer-employee relations were considered by the works council and it has not been made to appear that at any time was there any particular adverse criticism of the works council or the manner in which it functioned. However, in or about April or May, 1945, the union organized the employees at this plant and a very substantial percentage of the employees have become members of the union.

The union made application to the Ontario Labour Relations Board for certification as the collective bargaining agent of the employees and upon that application a vote was directed to be taken and was in fact taken on July 17, 1945, with the following result:

Number of eligible employees.....	119
Number of employees who voted....	88
Employees voting in favour of the Union.....	76
Employees voting against the Union.....	12

On August 17, 1945, the Union was certified by the Ontario Labour Relations Board as the bargaining representative of all the hourly rated employees at the Nobel plant, save and except foremen and any others not covered by the collective bargaining agreement.

On August 24, 1945, the Union requested the company to enter into negotiations with a view to consummation of a collective bargaining agreement. Negotiations commenced on August 31, 1945, and continued up to and including September 11, 1945. As a result of those negotiations the company and the union

were able to agree upon all the terms of a collective bargaining agreement save only two, both of which were requested by the union to be included therein:

First, a request for a union shop,

Second, a request for a check-off of union membership dues.

The company found itself unable to agree to the request of the union with respect to these two items.

The conciliation officer, Mr. H. Perkins, held two conferences with the parties at Nobel on October 25 and 26 as a result of which he recommended that agreement on the matters in issue might be facilitated by the appointment of a Conciliation Board.

It has been amply demonstrated to your Board that relations between the company and the employees represented by the union have been and are harmonious. There has never been, so far as your Board knows, a strike among the employees at this plant and none is presently threatened. Moreover the representative of the union has stated categorically to your Board that there is not the slightest suspicion on the part of the union or the employees that the company is in any way antagonistic towards the union; that quite to the contrary the company has indicated a desire to co-operate with the union to the end that the harmonious relations which have heretofore existed should continue and, indeed, improve. It has been therefore most refreshing to the members of your Board to meet with the parties where such an attitude of goodwill between them exists, and where the parties have heretofore been unable to agree, such disagreement has been due to a conflict of honest opinions held by the parties.

Your Board desires to record its appreciation of the co-operation and assistance given to it by the parties in their briefs; and in the discussions which ensued when your Board met with the representatives of the parties.

It has been made to appear to your Board that in Canada there are nine locals of the United Mine Workers of America, Division No. 50; the oldest of such local unions has been in existence for eighteen months. Local No. 13031 has been in existence since May of this year.

The village of Nobel is situated about six miles from the town of Parry Sound and of the total number of employees presently on the payroll of the company at Nobel, only eighteen live in the village, seventy-one of the others live at Parry Sound, and thirty-five elsewhere, a fact which your Board has taken into consideration as will subsequently appear when considering the subject of check-off.

Having regard to the fact that this will be the first agreement between the company and this particular union, your Board is unanimously of the opinion that the union should withdraw its request for a union shop. Your Board indicated its view in this respect to the representatives of the union and those representatives acceded to that view but did press for union security in the form of a check-off of the union dues.

The form of check-off requested by the union was the standard form by which the company would deduct from the employees pay monthly the amount of such monthly dues and pay the same to the treasurer of the local union.

It was made manifest to your Board that having regard to the particular conditions existing at this plant, the matter of the collection of union dues by the union presented abnormal difficulties, but such difficulties did not reflect any disloyalty or lack of full allegiance on the part of the union members to the union; rather it was the result of the location of the plant and the offices of the union, and the wide area in which the employees were resident. The company while adamant in its attitude that the collection of union dues was in its essence a problem or the responsibility of the union, recognized the particular difficulties to which we have referred in connection with the collection of union dues and stated that by way of demonstration of its willingness to assist the union in that regard, it would, if requested by the union, alter its standard mode of payment of wages to its employees, so that instead of paying them by cheque it would pay them in cash or continue to pay them by cheque and provide facilities whereby the employee could immediately cash his cheque at the office of the company: That the company would permit, and indeed, facilitate the union stewards, five in number, by providing them with desk space in immediate proximity to the place at which the employees would be paid, so that the employees having received payment of their wages, would be able to pay their union dues at once, without delay or inconvenience, to the stewards: That as a reminder to the employees that the union would expect them to pay their dues, on one of the two monthly pay days the company was prepared to permit the union to place placards close to the office at which the employees would be paid, drawing that fact to the attention of the employees.

The mechanics proposed by the company to ensure the voluntary payment by union members of their union dues, could, so your Board felt, accomplish that purpose. Those mechanics, however, are an innovation with

which the union has not had, at least at this particular plant, any previous experience, and the union was of the opinion that it might not operate satisfactorily. That question could only be resolved by putting the plan in operation and observing the results.

In view of the good relations which have heretofore existed between the parties, and for the purpose of testing the desirability and practicability of the mechanics as suggested by the company, the majority of your Board recommends that the collective bargaining agreement between the parties should include a provision whereby the plan suggested by the company should be put into operation and continue for a period of four months from the date thereof, by way of an experiment. If, at the expiration of such four months' period the company should conclude that such plan is not satisfactory to it, or if a majority of the employees indicate that such plan is not satisfactory to them, then such plan shall be superseded by a check-off under which the company will deduct the union dues from the employee's pay and remit the same direct to the treasurer of the union, such deduction by the company to be on the basis of a voluntary direction given to it by each employee who so requests, which direction shall be revocable by any employee and such substituted method for ensuring the payment of union dues shall be put in operation only if and when a majority of the employees have so requested, and continue in operation only so long as the majority of the employees continue to so request.

In the event that neither the company nor the employees desire to make the foregoing change, then the method to be adopted during the first four months' period of the agreement shall continue for the life of the agreement.

There was some slight controversy between the parties with respect to paragraph "A" of Article 3 of a proposed agreement submitted by the company. The part thereof in controversy consisted merely of the sentence "An employee shall be free to join or not to join the union." It was suggested that there might be certain innuendoes in that sentence. Your Board feel certain that none were intended, and by mutual agreement between the parties that sentence is to be stricken out.

Mr. Gerald H. Brown, a member of the Board, and nominee of the employer, is of opinion that the collection of union dues from its members is the responsibility of the union. He is, however, in complete accord with the voluntary arrangement of collecting such dues which is proposed by the company, and considers that it would be of material

advantage that this experiment should be fully tried out over the full period of the agreement.

Mr. Brown points out as well that the agreement will be open for re-negotiation two months prior to the date of its expiry, that is to say, ten months following the date of its inception, and is of opinion that there is good ground for believing that the facilities offered by the employer will fully meet the requirements of the union membership.

All of which is respectfully submitted.

Dated at Toronto, this twenty-first day of December, 1945.

Report of Board in Dispute between Goderich Mfg. Company, Goderich, Ont., and Local 2622, United Brotherhood of Carpenters and Joiners of America

On December 5, 1945, the Minister of Labour received the report of the Board of Conciliation, the personnel of which was as follows: His Honour Judge M. A. Miller, Sarnia, Chairman, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, Messrs. F. R. Darrow, Goderich, and Fred Molineux, Hamilton, appointed on the nomination of the employer and employees respectively.

Report of Board

The Board met in Goderich on the 27th and 28th days of November, 1945, Mr. J. E. Baechler representing the Employer, and Mr. Charles J. Gibbons, President of Local 2622 of, and Mr. A. Cooper, General Representative of, United Brotherhood of Carpenters and Joiners, representing the Employees.

On August 7, 1945, Mr. F. J. Ainsborough, a Conciliation Officer, met with representatives of the Employer and the Employees and arrived at an agreement which was put in typewritten form by Mr. Ainsborough. The Agreement was not to be executed until it had been approved by the Regional War Labour Board for Ontario. On account of matters which subsequently arose the Employer refused to execute the Agreement.

Not without difficulty the Parties were brought to agreement before this Board on the differences which still existed between them, and an Agreement was this day executed by the representatives of the Parties. An executed copy of the Agreement as completed is hereto attached. It is in the form as originally prepared by Mr. Ainsborough, save as to those parts which are underlined in the attached copy.

All of which is respectfully submitted.

Dated at Goderich this 28th day of November, 1945.

(Sgd.) M. A. MILLER,
Chairman
(Sgd.) F. R. DARROW,
(Sgd.) FRED MOLINEUX
Members

MEMORANDUM OF AGREEMENT

Agreement made this 28th day of November, A.D. 1945, between the Goderich Manufacturing Company Limited, Goderich, Ontario, hereinafter called the Employer, and Local Union No. 2622 of the United Brotherhood of Carpenters and Joiners of America, hereinafter called the Union.

It is agreed that this contract is for exclusive joint use and benefit of the contracting parties as heretofore defined and set forth in the Agreement, and it shall be construed as binding upon and effective in determining only the relations with each other of those represented by the Parties signatory hereto. It is the intent and purpose of the Parties hereto that this Agreement will promote and improve industrial and economic relationship in the industry.

Hours of Work

It is further agreed that forty-eight hours shall constitute a week's work to be worked as follows: eight hours on Monday to Saturday inclusive, same to be worked between the hours of 8 a.m. and 12 noon and from 1 p.m. to 5 p.m. This clause does not apply to Teamsters and Truckers.

Overtime

Overtime means all time worked in excess of eight hours in any one day from Monday to Saturday inclusive and shall be paid for at the rate of time and one-half. All time worked on Sundays and Statutory Holidays shall be paid for at the rate of time and one-half. This clause does not apply to Teamsters or Truckers.

Notwithstanding anything in the two preceding clauses contained, if, through work stoppage by reason of a machine jamming or other similar mishap, it occasionally be necessary to work for a period after 5 p.m. to complete the loading of a truck, the employees shall work such extra time, not to exceed 15 minutes, such extra few minutes to be taken as offsetting time lost by reason of such mishap and not to be counted in calculating the time worked nor to be considered as overtime. It is understood that this provision is entered into in a spirit of co-operation to facilitate the efficient operation of the plant in event of mishap and is not to become a habitual occurrence. This clause does not apply to Teamsters and Truckers.

Teamsters and Truckers shall be entitled to no increased rate of wages for overtime. All time worked on Sundays and Statutory Holidays shall be paid for at the rate of time and one-half. Teamsters and Truckers shall pay their own necessary expenditures for meals and lodgings and when unavoidably absent from Goderich on the employer's business as a team-

ster or trucker shall be paid One Dollar a day for expense money. This paragraph shall be subject to the approval of the Regional War Labour Board in Ontario, and the Employer and the Union agree to make joint application, or that either Party may alone make application, to such Board for such approval.

Wage Rates

A schedule of wage rates, approved by the Regional War Labour Board, shall be attached to this Agreement and form a part thereof.

Holidays

All employees, upon completion of one year of continuous service, shall be entitled to one week's vacation with full pay. Vacations shall, so far as possible, be granted at times most desired by the employees, but the final right of allotment of vacation period is exclusively reserved by the Employer and the Plant Committee in order to ensure the orderly operation of the Plant.

Seniority

It is understood and agreed that in all cases of promotion or increase or decrease of forces, the following factors shall be considered and when factors (a) and (b) are relatively equal, length of continuous service shall govern:

- (a) Length of continuous service.
- (b) Knowledge, training, ability, skill, reliability and efficiency.

Working Conditions

(1) An employee whose earning capacity is limited because of physical or mental handicap or other infirmities, may be employed on suitable work at a wage agreeable to the Employer and the Union.

(2) Any employee interfering with any other worker during working hours shall be subject to discipline.

(3) There shall be no smoking or drinking on the premises at any time except in an area designated by the Employer where smoking will be permitted during other than working hours.

(4) An employee who reports for work in an unfit condition to carry on his duties may be sent home by any representative of Management.

(5) Workers shall not leave the plant during working hours without permission from a representative of Management.

(6) No Employee shall have or permit anyone else to have any alcoholic liquor on any truck or other vehicle of the Employer.

(7) No Teamster or Trucker shall take unnecessary time or incur any avoidable expense on any trip, and anyone doing either without reasonable excuse, or making false claims for time worked, shall be subject to dismissal.

Recognition

(1) The Committee designated by the Union shall be recognized by the Employer as the representatives of its Employees for the purpose of negotiation of all disputes and grievances arising during the life of this Agreement and they shall have the right to call into negotiations the General Representative of the Organization. Should the Committee and the Employer be unable to agree, either Party may by giving written notice to the other, require that the question be submitted to an impartial umpire to be selected by the Parties, or failing their agreement on an umpire within five days of the giving of such notice, an impartial umpire to be appointed on the request of either the Employer or the Committee by the Minister of Labour for Ontario. The decision of such umpire shall be final and binding on the Parties.

It shall be optional to the Employer to consider any grievance arising more than five working days before its submission and no grievance shall be considered which usurps the function of management.

(2) All present employees who are now members of the Union shall retain their membership in the Union as a condition of employment. Any new employee who becomes a member of the Union shall retain his membership in the Union as a condition of employment. This clause shall be given a sixty day trial and continued in force thereafter unless changed by request of either Party.

No Strikes or Lockouts

During the term of this Agreement, there shall be no lockouts on the part of the Employer and no strikes on the part of the Union.

General

The Union and the Company will co-operate for the purpose of reducing the present high rate of absenteeism.

Duration

This Agreement shall be effective December 1, 1945, and shall continue in force for one year thereafter. Sixty days' notice in writing shall be given by either Party for change in the Agreement.

Signed on behalf of the Employer, The Goderich Mfg. Co. Ltd.:

(Sgd.) J. E. BAECHLER.

Signed on behalf of Local Union No. 2622:

(Sgd.) CHAS. J. GIBBONS,

(Sgd.) A. COOPER,

General Representative.

Report of Board in Dispute between Onward Manufacturing Co. Kitchener, Ont., and Local 1719, International Association of Machinists

On December 21, 1945, the Minister of Labour received the report of the Board of Conciliation, the personnel of which was as follows: His Honour Judge J. C. M. German, Chairman, Cobourg, Ont., appointed by the Minister in the absence of a joint

recommendation from the other two members of the Board, Messrs. L. K. DeBus, Kitchener, and R. Dickie, Hamilton, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

Sir,—This Board, consisting of His Honour Judge J. C. M. German as Chairman, Robert L. Dickie, Esquire, the Union's nominee, and Louis K. DeBus, Esquire, the nominee of the Employer, convened on November 6, 1945, in the City of Toronto, and on the same day Mr. T. A. Witzel, Junior, appeared before the Board, and again on November 22, when the parties appeared before the Board and were represented as follows:—

For the Union: Mr. R. J. Boulton, Organizer of International Association of Machinists, of which the Union is an affiliate.

For the Company: Mr. T. A. Witzel, Junior, General Manager of the Company.

The Agreement in discussion is the first Collective Bargaining Agreement between the parties.

This Board is pleased to report that it has effected a conciliation in this matter and the parties have agreed to execute an Agreement in the terms of the draft Agreement attached as Schedule "A" to this report.

All of which is respectfully submitted.

Dated at Toronto this 14th day of December, 1945.

(Sgd.) J. C. M. GERMAN,
Chairman,

(Sgd.) ROBERT L. DICKIE,
Member of Board,

(Sgd.) LOUIS K. DEBUS,
Member of Board.

The appended agreement included clauses alluding to union security, grievance procedure, seniority, and overtime.

When it has been ratified by the parties it will be printed under the collective agreement section in a subsequent issue.

Conciliation Work of the Industrial Relations Branch During December, 1945

Activities Under the Conciliation and Labour Act and Order in Council P.C. 4020

OFFICERS of the Industrial Relations Branch dealt with 12 industrial disputes during the month of December, involving 2,532 work-people employed in 16 separate establishments. Of these, 8 were new disputes which originated during the month and 4 were situations which had been untermiated as of November 30, and received further attention in December. These disputes were dealt with under the provisions of the Conciliation and Labour Act and under Order in Council P.C. 4020. They were thus distinct from and in addition to the Conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Brief summaries of the cases of chief interest follow:—

Laundry Workers, Toronto, Ont.—In mid-December the Federal Minister of Labour was asked by the Minister of Labour for Ontario to appoint an Industrial Disputes Inquiry Commission under the provisions of Order in Council P.C. 4020 to investigate a charge that Baker Brothers Cleaners, Toronto, Ont., had dismissed an employee because of his union membership and activity on behalf of the Dyers and Cleaners Union. On December 24, the Minister of Labour appointed His Honour James Parker, of Toronto, to conduct an investigation. The Commissioner found that the employee had been discharged for just cause.

Telephone Employees, Chicoutimi, P.Q.—On December 11, the Department of Labour was advised of a strike at Chicoutimi, P.Q., by 23 telephone operators employed by the Saguenay-Quebec Telephone Company. The strike developed over the alleged refusal of the Company to implement a Finding and Direction of the Regional War Labour Board for Quebec as amended on appeal by the National War Labour Board. The dispute was investigated on behalf of the National War Labour Board by an Industrial Relations Officer of the Department of Labour from Montreal. Striking employees resumed work on December 15 and a written understanding was entered into by the parties with regard to the manner in which wage increases would be put into effect.

Coal Miners, Drumheller, Alta.—Late in November the Minister of Labour was asked to appoint the Independent Chairman of an Arbitration Committee to deal with two disputes affecting members of the Drumheller Coal Operators' Association and the United Mine Workers of America, District 18. Mr. John W. Hugill, K.C., of Edmonton, Alta., was named as Chairman and hearings were held at Drumheller on December 14. The first dispute involved the question of whether an

employee of the Brilliant Coal Company Limited, Drumheller, had earned the right to 12 days' holiday with pay. The man had been absent from work for a month during the previous year under a compensation award as the result of an accident which occurred while he was employed in the mine. During his absence an eight-day strike occurred and the operators contended that this period should not be counted as a credit towards holidays because the man would not have worked the eight days if he had not been absent on compensation. The decision of the Arbitration Chairman upheld the contention of the Union that the employee had been absent through causes beyond his control and was entitled to full holidays with pay. The second case, involving an employee of Rosedale Collieries Limited, also concerned the question of whether the employee was entitled to two weeks' holidays with pay. The man had been absent from work for 24 days as the direct result of an injury sustained in unusual circumstances outside of working hours. The Arbitrator ruled that the man's absence from work while injured was not through causes beyond his control and that he could not qualify for two weeks' holidays with pay.

Leather Workers, Kitchener, Ont.—Two brief strikes occurred during December at the plant of John Lang and Sons, Ltd., Kitchener, Ont., in which groups of employees belonging to the National Union of Shoe and Leather Workers, Local No. 30, participated. On December 6 some 18 men employed in the beam house quit work in protest against certain deductions from their pay. They resumed work the following morning after an explanation had been given by the management. On December 10 the Company notified five men that there was no work for them that afternoon, and when no explanation was immediately forthcoming 70 employees quit work. An Industrial Relations Officer from Toronto visited the plant and arranged a joint conference of Company and Union officials. Management explained that the half-day lay-off of the five men was due to a shortage of materials caused by the stoppage of work on December 6. Representatives of the employees claimed the strike was in protest not only against the suspension of the five men but also the long delay in the negotiation of an agreement between the parties following certification of the union by the Ontario Labour Relations Board and the alleged hostile attitude of a Company official. A temporary grievance procedure was drafted by the Industrial Relations Officer which was acceptable to both parties pending the consummation of a collective agreement and operations were fully restored on December 17.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the *LABOUR GAZETTE* from month to month. It is not possible, because of limitation of space, to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included. Verbally accepted agreements are so indicated.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Mining: Metal Mining

HALET, P.Q.—MALARTIC GOLD FIELDS LTD.
AND INTERNATIONAL UNION OF MINE,
MILL AND SMELTER WORKERS, LOCAL 696.

Agreement to be in effect from July 16, 1945, to July 15, 1946. The company recognizes the union as the sole collective bargaining agent for all eligible employees, who may become or refrain from becoming members of the union.

Hours of work: for underground workers, except cage tenders, 48 per week; mill men, crushermen, hoistmen, lampmen, cage tenders, and boilermen, 56 per week; general surface, mechanical and electrical employees, 54 per week. Underground employees shall be allowed 30 minutes for lunch during each shift. Overtime: overtime rates do not apply where an employee works more than maximum weekly hours due to change of shift or failure of relief to report for work. Time and one-half for all work on 3 specified statutory holidays. Vacation: after one year's continuous service, one-half day with pay for each 25 days actually worked to a maximum of 7 days.

Wage rates: existing scale to be maintained. Provision is made for seniority rights and grievance procedure.

KIRKLAND LAKE, ONT.—LAKE SHORE MINES
LTD. AND INTERNATIONAL UNION OF MINE,
MILL AND SMELTER WORKERS, LOCAL 240.

Agreement to be in effect from September 10, 1945, to September 9, 1946, and year to year thereafter, subject to 30 days' notice. The company recognizes the union as the sole bargaining agency for all eligible employees.

Hours of work: 48 per week, underground—8 per shift from collar to collar; however, variations not exceeding 15 minutes which do not occur consistently to be disregarded, delays in excess of 15 minutes to be considered as

time worked and to be paid for at straight time except if delay is beyond company's control. Overtime: time and one-half shall be paid for all work in excess of the regular week other than above and for work on 3 specified statutory holidays. Vacation: one week (7 days) with pay for all employees with one year's seniority.

Wages: scale presently in effect shall be maintained.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Vegetable Foods

Correction

TORONTO, ONTARIO.—CANADA BREAD CO. LTD.
AND AMALGAMATED BAKERS AND CONFECTIONERS OF TORONTO

In the agreement which was summarized in the *LABOUR GAZETTE*, October, 1945, p. 1515, the paragraph on hours should be corrected to show 7½ per day (5 days), 11 on Friday, a 48½-hour week, in the shop; 7 per day (5 days), 10½ on Friday, a 45½-hour week, for the shipping room.

Manufacturing: Rubber Products

WELLAND, ONT.—JOSEPH STOKES RUBBER COMPANY LTD. AND UNITED ELECTRICAL, RADIO AND MACHINE WORKERS OF AMERICA, LOCAL 523.

Agreement to be in effect from September 19, 1945, to September 18, 1946, and thereafter from year to year, subject to 30 days' notice. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, November 1943, p. 1527, with the addition that the present scale of wages will continue in effect, but the company and the union agree to enter into wage negotiations from time to time as desired by either party.

Manufacturing: Fur and Leather Products

ST. HYACINTHE, P.Q.—J. A. & M. COTE LTD. AND
LE SYNDICAT NATIONAL DES TRAVAILLEURS
EN CHAUSSURES INC. DE ST. HYACINTHE.

Agreement to be in effect from April 1, 1945, to March 31, 1946, and thereafter from year to year subject to 60 days' notice. The company recognizes the union as bargaining agent for its employees.

There will be no work on Sundays, church holy days, Good Friday morning, St. Jean Baptiste Day, Labour Day and the day after New Year's. Vacation: one week to all production workers who will be paid 2 per cent of wages earned during previous 12 months or less in the company's service.

Provision is made for grievance procedure.

Nothing in this agreement shall be interpreted to be contrary to the agreement with the Collective Agreement Act for the shoe manufacturing industry for the Province of Quebec.

Manufacturing: Pulp, Paper and Paper Products

POWELL RIVER, STILLWATER, OCEAN FALLS, PORT MELLON, WOODFIBRE AND PORT ALICE, B.C.—POWELL RIVER CO., LTD., PACIFIC MILLS LTD., SORG PULP COMPANY LTD. AND BRITISH COLUMBIA PULP AND PAPER CO., LTD., AND INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (POWELL RIVER LOCAL 142 AND OCEAN FALLS LOCAL 360) AND INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (POWELL RIVER LOCAL 76, OCEAN FALLS LOCAL 312, PORT MELLON LOCAL 297, WOODFIBRE LOCAL 494 AND PORT ALICE LOCAL 514)

Agreement to be in effect from May 1, 1945, to April 30, 1946, and thereafter from year to year subject to 2 months' notice. The company recognizes the union as the agency representing all eligible employees. The company will co-operate with the unions in obtaining and retaining members. Maintenance of membership: any employee who now is a member in good standing, or who becomes or is reinstated as a member of either union shall, as a condition of continued employment, maintain such membership in good standing.

Hours of work: 8 per day, a 48-hour week. Overtime: time and one-half after 8 hours (except for tour workers when due to changing shifts or absence of mates), for work on Sundays or designated day off, or 5 specified statutory holidays. Vacation: one week with pay for all employees with one year's continuous service in which two-thirds of the full time hours have been worked, or if employed less than a year and have worked 1,800 hours. After qualifying for 5 vacations, employees will be granted 2 weeks with pay subsequently.

Wage rates: those in effect as of May 1, 1945, will become effective as job rates making the base rate for all male common labour 67 cents per hour. Female labour, where such an arrangement now exists, will be paid in accordance with existing rates, provided however, that the period between the hiring and attainment of full rate shall not exceed three months and the difference between the hiring rate and the job rate shall not exceed 5 cents. A night shift differential of 3 cents per hour will be paid in addition to the hourly rate for all night shift work.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Miscellaneous Wood Products

GODERICH, ONT.—GODERICH MANUFACTURING COMPANY LTD. AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL 2622.

This agreement was reached in settlement of a dispute, see p. 44 of this issue.

Agreement to be in effect from December 1, 1945, to November 30, 1946. Sixty days' notice in writing shall be given by either party for change in the agreement.

Maintenance of membership: employees who

now are members of the union and any new employees who become members must maintain their membership as a condition of employment. This clause is to be given a 60-day trial and continued in force thereafter unless changed by request of either party.

Hours of work: 8 per day, a 48-hour week, except teamsters and truckers. Overtime: time and one-half for all work in excess of the above hours and for work on Sundays and statutory holidays. Teamsters and truckers shall receive time and one-half for work on Sundays and statutory holidays only. When unavoidably absent from Goderich on the employer's business as such, shall be paid \$1 a day expense money subject to approval of Regional War Labour Board. Vacation: one week with pay for all employees upon completion of one year's continuous service.

Hourly wage rate: lumber scalers, 67 cents; lumber pilers, 47 to 67 cents; garage mechanics, 77 cents; loaders, 52 cents; truck drivers and teamsters, 60 cents; sawyers (cut-off), slab saw operators, labourers, 40 to 50 cents; carriage operators, 63 cents; machinists and carpenters, maintenance (millwrights), 70 cents; trimmers, edger men, Jack ladder operators, 50 to 60 cents; tail sawyers, assistant carriage operators, 45 to 55 cents; saw filers, \$1.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Metal Products

THREE RIVERS, P.Q.—CANADA IRON FOUNDRIES LTD. AND INTERNATIONAL MOULDERS AND FOUNDRY WORKERS' UNION OF NORTH AMERICA, LOCAL 101.

Agreement to be in effect from September 1, 1945, to April 30, 1947 or 1948. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, July 1944, p. 865, with the addition that provision is made for the deduction of union dues.

HAMILTON, ONT.—INTERNATIONAL HARVESTER CO. OF CANADA LTD., HAMILTON HARVESTER WORKS AND UNITED STEELWORKERS OF AMERICA, LOCAL 2868.

Agreement to be in effect from October 18, 1945, to October 18, 1946, and thereafter subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, August, 1943, p. 1130 and October, 1944, p. 1245, with the following notable exception—check-off: any employee may authorize the company to deduct union dues of \$1 per month from his pay and transmit same to the union. The company will continue to do this until the authorization is revoked by employee giving 90 days' notice or if at any time the number of employees authorizing the check-off falls below 51 per cent of the total number of eligible employees.

INGERSOLL, ONT.—THE INGERSOLL MACHINE AND TOOL COMPANY, LTD. AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 2918.

Agreement to be in effect from April 9, 1945, to April 9, 1946, and thereafter from year to year subject to notice. The Company recognizes the union as the sole collective bargaining agency for all eligible employees. Hours of work and overtime: time and one-half shall be paid for time worked in excess of 9 hours per day or 48 hours per week and for work on Sundays and

all recognized holidays. Vacation: one week with pay for all employees with one year's seniority and two weeks with pay for all employees with five years' seniority.

Wages: The company agrees to negotiate with the union regarding wage rates within 30 days of signing of agreement. The schedule thus arrived at shall be attached to and become part of the agreement subject to approval of the Regional War Labour Board.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Non-metallic Minerals and Chemicals

NIAGARA FALLS, ONT.—CANADIAN CELLUCOTTON PRODUCTS CO., LTD. AND THE INTERNATIONAL CHEMICAL WORKERS UNION, LOCAL 215.

Agreement to be in effect from October 12, 1945, to October 11, 1946, and thereafter from year to year subject to 30 days' notice. The company recognizes the union as the exclusive bargaining agency for all hourly-paid employees. Maintenance of membership: every employee who is a member of the union in good standing 14 days after October 12, 1945, must as a condition of employment maintain his membership in good standing and all new employees, except ex-service men returning for re-instatement, upon becoming permanent shall do likewise. Check-off: the company will, if and to the extent authorized by each employee, deduct from the employee's pay each week his union dues and remit same to the union. Hours of work: 7-5 to 8-8 per shift Monday through Friday, 4 to 10.5 on Saturday, 48 per week or less.

Overtime: time and one-half for work in excess of regular daily hours or shift hours in any day or in excess of 48 hours per week and for work on Sundays and 6 specified statutory holidays. Vacation: one week with pay for employees with one year's continuous service with company and 2 weeks with pay for all employees with 5 years' service.

Wage rates and ranges of wage rates to be paid pursuant to this agreement shall be those effective at the date hereof, subject to any direction or authorization made under the War-time Wages Control Order 1943, pursuant to the joint application which will be filed by the union. A premium rate of 6 cents per hour above the regular rate shall be paid for all night work subject to approval of Wartime Wages Control Order, 1943. Provision is made for seniority rights and grievance procedure.

Manufacturing: Miscellaneous

MOUNT DENNIS, ONT.—CANADIAN KODAK COMPANY, LTD. AND INTERNATIONAL CHEMICAL WORKERS' UNION, LOCAL 159.

Agreement to be in effect from September 7, 1945, to November 6, 1946. The company recognizes the union as the sole representative of its employees. Any employee may become or refrain from becoming a member of the union. Check-off: the company will deduct from the pay of employees, who so authorize, the amount of the union dues and transmit same to the union.

Hours of work and overtime: time and one-half will be paid for work in excess of 8½ hours in any 24-hour period or in excess of 8 hours, for shift workers, or in excess of 48½ hours per week, whichever is greater, except when hours worked in a 24-hour period are due to changing shifts or reassignment to regular shift after an emergency shift. Time and one-half also to be paid for work on Sundays, other than by employees who regularly work that day, and 6 specified statutory holidays. Vacation of one week with pay for employees with one year's continuous service with the company and 2 weeks with pay for all with 5 years' service.

Wage rates in effect at date of agreement shall not be decreased during agreement. Application has been made to the Regional War Labour Board designed to lead to a wage increase for substantially all employees. Any authorization or direction for an increase not inconsistent with the company's established job evaluation plan will be paid during agreement.

Provision is made for seniority rights and grievance procedure.

Trade

WINNIPEG AND ST. BONIFACE, MAN.—FIVE DAIRIES AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, WAREHOUSEMEN AND HELPERS OF AMERICA, (MILK WAGON DRIVERS AND DAIRY EMPLOYEES LOCAL 119).

Agreement to be in effect from January 1, 1945, to December 31, 1945, and thereafter from year to year subject to 30 days' notice. The companies agree to hire union members in good standing if available; any others employed must become members of the union within 15 days.

Hours of work: for factory employees, 8 per day; for all tradesmen, 8 per day, 6 days a week, a 48 hour week. Overtime to be paid at the regular daily rate except in emergency cases outside control of the company. Six days shall constitute a week's work for all employees. No employee should be asked to work more than 3 of his rest days in one year. Vacation: two weeks with pay for all employees with one year's service.

Weekly wage rates—inspectors and relief men on commission, a guaranteed minimum of \$36.35; wholesale drivers, store route, minimum of \$32.40, plus commission; ice cream salesmen, \$32.40 plus commission; storage men, regular plant relief men, \$31.50; general plant help, \$30.50; stablemen and washers, \$28.50; shippers and checkers, \$33.95; blacksmiths, \$33 to \$34 (44 and 48 hour week); engineers, \$33.50 to \$37.50 (2nd to 4th class); temporary help when required in the factory shall be paid \$4.50 per day for a period of 2 months, after which time they shall be paid at the same rate as the permanent employees. Minimum rate for all permanent plant employees shall be \$30.50 per week.

Credits: salesmen may extend credit to bona fide householders up to \$3 (or more if authorized by the company). If any of this credit becomes a loss, such loss will be borne equally by the company and the salesman. (The first part of this clause is suspended as long as the Order in Council prohibiting giving credit is in effect).

Provision is made for seniority rights and a sick benefit fund.

Service: Professional

MONTREAL, P.Q.—LA COMMISSION DES ECOLES CATHOLIQUES DE MONTREAL AND L'ALLIANCE DES PROFESSEURS CATHOLIQUES DE MONTREAL.

Agreement, signed September 10, 1945, to be in effect from July 1, 1944, to June 30, 1945, and thereafter from year to year subject to notice during May. This agreement applies only to French-speaking lay teachers in the employ of the Montreal Catholic School Commission.

Scale of salaries for male teachers: elementary schools—(1st to 7th grades) single men, minimum \$1,200 per year; married men minimum \$1,500, with an annual increase of \$125 to a maximum of \$2,900 for junior high schools—(grades 8 and 9), annual increase \$125 to a maximum of \$3,200; for senior high schools—(grades 10, 11 and 12), annual increase of \$125 with maximum \$3,500; assistant principals—\$125 annual increase to a maximum of \$3,500 for elementary schools, \$3,600 for junior high schools, \$3,800 for senior high schools; principals—\$125 annual increase to maximum of \$3,700 for elementary schools, \$3,800 for junior high schools, \$4,000 for senior high schools.

Scale of salaries for female teachers: elementary schools—minimum \$1,000, annual increase, \$50 until \$1,200 is reached, thereafter annual increase of \$100 to maximum of \$2,000; junior high schools—increase of \$100 to \$2,200 maximum; senior high schools—increase of \$100 to \$2,400 maximum; assistant principals—\$100 increase to maximum of \$2,400 for elementary schools; junior high schools, \$100 annual increase to \$2,500 maximum; senior high schools, \$100 annual increase to \$2,700 maximum; principals—maximum, elementary schools, \$2,700;

junior high schools, \$2,800; senior high schools, \$3,000.

A bonus of \$100 shall be granted to teachers of the 7th grade and 9th grade, which are certificate classes. A bonus of \$100 shall be granted to teachers of auxiliary classes.

The Commission grants to each teacher in charge of physical training in the different schools 30 cents per pupil in the physical training class, based on the average attendance of the year in the course.

Sick leave credit with pay of $1\frac{1}{2}$ days per month is allowed which is cumulative to a maximum of 200 days.

After 10 years' service teachers who are taking a university course leading to a degree in pedagogy or its equivalent may use their accumulated sick leave with pay, with authority to such teachers to visit any school under the jurisdiction of the Commission. Such teachers may use this leave only upon the favourable report of the Director of Studies, and the number taking advantage of this leave is limited to 10 per year.

Provision is made for the settling of differences.

MONTREAL, P.Q.—THE MONTREAL CATHOLIC SCHOOL COMMISSION AND THE FEDERATION OF ENGLISH SPEAKING CATHOLIC TEACHERS INC.

Agreement, signed September 11, 1945, to be in effect from July 1, 1944, to June 30, 1945, and thereafter from year to year subject to notice during May. This agreement is similar to that of La Commission Des Ecoles Catholiques De Montreal and l'Alliance Des Professeurs Catholiques De Montreal summarized above, with the same scale of salaries.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding throughout the Province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the LABOUR GAZETTE, January, 1943, p. 86.

Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Recent proceedings under the Act include the extension of two new agreements and the amendment of one other. All of these are noted below. Requests for the amendment of the agreements for barbers and hairdressers in Mississquoi County, and for the work glove industry in the province, were gazetted November 24. A request for a new agreement for the furniture industry in the Province, and a correction of the request for a new agreement for building trades at Three Rivers were also published November 24. Requests for the amendment of the building trades agreement at Chicoutimi, and for a new agreement for grocers and butchers at Joliette were published December 1. Requests for the amendment of the building trades agreement at Chicoutimi and for the corrugated paper box industry agreement for the Province were published December 7. A request for a new

agreement for the building materials industry throughout the Province was also published December 7.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties.

Trade

GROCERS AND BUTCHERS, SHERBROOKE.

An Order in Council, dated November 15, and gazetted November 24, amends the Constitution of the Joint Committee by changing the name of the Joint Committee of Sherbrooke's Grocers and Butchers (L.G. July, 1940, p. 734, Aug., p. 868; June, 1941, p. 706; Oct., 1943, p. 1382; Dec., 1945, p.) to that of "The Eastern Townships Retailers Joint Committee."

Service: Public Administration

POLICEMEN, QUEBEC.

An Order in Council, dated November 15, and gazetted November 24, makes obligatory the terms of a new agreement between The City of Quebec and "Le Syndicat professionnel des Policiers municipaux de Québec, inc.": Agreement to be in effect from November 24, 1945, to April 30, 1946, and year to year thereafter subject to notice.

Hours: constables are divided into 2 shifts and either shift is relieved by the other every 24 hours. Constables required to remain on duty by order of the chief of police must do so without pay, and overtime done in that manner is replaced by equivalent time off.

Wage rates: inspectors and sergeant-detectives, from \$45 per week during first year to \$52 during fifth year; detectives, from \$36 during first year to \$44 during fifth year; radio technician, \$2,080 to \$2,500 per year (annual increase of \$100); quarter-master, \$40.50; operators, \$35.50; taximeter checker, \$35.50; sergeants, \$39; corporals, \$37; constables, \$21.50 on entering service to \$35 after fourth year.

Special constables are not governed by the provisions of the present decree.

Vacation: ten watches or guards, with pay.

Provision is made for uniforms, suits, allowance for detectives, etc. Sick leave: 1½ days per month with pay is allowed, which is cumulative, and which may be used either for personal illness or when a member of his family is ill.

MUNICIPAL EMPLOYEES (OUTSIDE SERVICES), QUEBEC

An Order in Council, dated November 15, 1945, and gazetted November 24, makes obligatory the terms of a new agreement, between The City of Quebec and "Le Syndicat des Employés des Services extérieurs de la Cité de Québec inc." Agreement to be in effect from November 24, 1945, to May 1, 1946, and year to year thereafter subject to 60 days' notice.

Temporary Employees

Minimum hourly rates: labourers in all departments including the snow removal service, 55 cents; asphalt mill—chief mechanic, 80 cents; stationary boiler fireman, 70 cents; weighers, mixers, workers on tubes, workers on "alivettes"

60 cents; carters, 56 cents; laying of asphalt—operators on rollers, 80 cents; shift leaders, 75 cents; rakers, 70 cents; surface men, rammers, drivers of city trucks, 60 cents; tracers, shovellers, oilers, sweepers, cutters, 55 cents; municipal shop—machinists, mechanics (with tools), wheelwrights, blacksmiths, auto mechanics, boilermakers, oxygen and electric welders, 75 cents; mechanics' helpers, blacksmiths' helpers, 55 cents; store man, 60 cents; master mechanics and body-workers, cabinet makers, 80 cents; municipal building—bricklayers, plasterers, masons, 95 cents; carpenters, joiners, joint pointers, cement finishers, tinsmiths, roofers, electricians, pipe mechanics, 75 cents; compressor operators, mixer operators, painters, 70 cents; roads—drivers on snow ploughs, loaders, blowers, 70 cents; tractor drivers, 65 cents; truck drivers, sprinkler truck drivers, 60 cents; carters, 56 cents; rubbish department—removers, \$28 per week; truck drivers, \$29; carters, \$28; watchmen and varied occupations—\$25 and \$28; bridge operators, \$33; parks—horticulturists, 65 cents per hour; gardeners, 62 cents; carters, 56 cents; aqueduct—linemen, \$28 per week; truck drivers, 60 cents per hour; plumbers, 75 cents; charwomen, \$9.25 per week; foreladies, \$20. Overtime is payable at time and one-half with certain exceptions.

Particular provisions are made respecting the employees of the Provincial Exhibition Commission.

Vacation: three days after one year's service, 6 days per year thereafter. Provision is made for sick leave with pay.

Regular Employees

Minimum wage rates: labourers, \$26 per week; asphalt mill (fabrication)—stationary boiler fireman (56 hour week), \$39; mixers—watchmen (60 hours), \$30; asphalt laying—roller operator (48 hours), \$38; shift leader, \$33; city truck drivers, \$28.50; municipal shop (44 hours)—machinists, mechanics (with tools), wheelwrights, blacksmiths, auto mechanics, oxygen welders, blacksmiths, welders, boiler-makers, \$32.50; mechanics' helpers, \$26; cabinet makers \$35; municipal buildings (44 hours)—bricklayers, plasterers, masons, \$40; carpenters, joiners, joint pointers, cement finishers, pipe mechanics, electricians, tinsmiths, roofers, \$32.50; painters, \$30.50; aqueduct—linemen \$28, plumbers \$35; roads—drivers (tractor, water trucks, trucks equipped with snow ploughs or scrapers), \$31; carters, \$26.50; rubbish department—removers and carters (54-hour week), \$28; drivers, \$29 (54-hour week); watchmen (56 hours), \$25 and \$28; parks—horticulturists, \$28.50; gardeners, \$27.50.

Vacation: 2 weeks with pay yearly. Provision is made for sick leave with pay up to one month.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, ST. HYACINTHE

An Order in Council, dated November 22, and gazetted December 1, amends the previous Orders in Council for this industry (L.G., Jan., 1945, p. 71, and previous issues) by providing for a change in working hours in Zone IV. In Zone IV, \$19 per week plus 50 per cent of all gross receipts in excess of \$26. Vacation—one week with pay each year to regular men's barber and hairdresser-employees in Zone IV. Wages to be paid during vacation shall be 2 per cent of gross wages earned by the employee during the last 12 months.

Report of the Royal Commission on Co-operatives

THE Royal Commission on Co-operatives appointed by Order in Council P.C. 8725 of November 16, 1944, issued its report in December, 1945. It is a volume of 245 pages and is the result of a detailed investigation of co-operative enterprises particularly in Canada, but in Great Britain and the United States as well.

Commencing at Vancouver on January 15, 1945, hearings were held in eight leading cities across the Dominion. In all, 175 briefs were filed with the Commission by co-operative associations, Boards of Trade, Canadian Trade Associations, corporations, firms, individuals and other public bodies. Members of the Commission spent several weeks in Great Britain and the United States, visiting some of the principal centres of co-operative activity and holding informal meetings with government officials, representatives of non-co-operative, as well as co-operative groups, economists, and writers. The practice with respect to the taxation of co-operatives in those countries and the attitudes of interested parties thereto were studied.

The warrant establishing the Commission followed a formal statement presented to a Committee of the Privy Council by the Hon. J. L. Ilsley, Minister of Finance, early in November, 1944. In that statement the Minister represented that "doubt had arisen as to the effect of the Income War Tax Act and the Excess Profits Tax Act, 1940, in the case of co-operative corporations, associations, and societies both as regards the general principles intended by Parliament to be applied and the effect, in many matters of detail, of the said taxation statutes upon these co-operative organizations and their members."

The statement recommended that "a full public inquiry into the application of income and profits tax measures to organizations organized and operated on a co-operative or mutual basis . . . and into the comparative position in relation to taxation under such measures of persons engaged in business in direct competition with co-operatives, should be undertaken without delay."

The Commission was set up under Part I of the Inquiries Act. The following were named Commissioners: Hon. Errol M. W. McDougall, a Judge of the Court of King's Bench, Quebec (chairman); Mr. B. N. Arnason, Regina, Sask.; Mr. G. A. Elliott, Edmonton, Alberta; Mr. J. M. Nadeau, Montreal, P.Q.; and Mr. J. J. Vaughan, Toronto, Ontario.

Make-up of Report

The report proper is prefaced by comments on the scope of the inquiry, including quotations of the relevant portions of the income War Tax Act and the Excess Profits Tax Act, 1940, together with a brief analysis of the nature and incidence of the income tax. Part I of the report deals with trading co-operatives, tracing their development from the early days of agricultural settlement in Canada to their present well organized, complex and extensive operations in marketing the products of the farms and the fisheries and in supplying many of the requirements of those engaged in those industries. The varied structural organization of Canadian co-operative associations is described in some detail, including their capital structure, membership qualifications, management controls, marketing methods, co-operative financing and government assistance.

Part II deals specifically with credit unions, their types, their organization and operation, their present tax position and the factors having a bearing on suggested amendments to the tax regulations that apply to them. Part III provides an analysis of mutual insurance organizations and the arguments advanced for and against changes in the method of taxing them.

Five lengthy appendices discuss (a) "Relative Growth of Co-operative Business in Canada," (with tables and graphs); (b) "Organization and Operation of Certain Canadian Co-operative Associations"; (c) "Financial Information and Operating Methods of Certain Co-operative Societies in the Provinces of Quebec and Saskatchewan," (with tables and charts); (d) "The Taxation of Co-operative Societies in Great Britain and the United States"; (e) "Development and Operation of Credit Unions in Canada."

Tax Position of Co-operatives and Their Competitors

The tax position of co-operative associations the Commission states, may be regarded at present as falling within the purview of section 4(p) of the Income War Tax Act and thus not liable to corporate income or Excess Profits tax.

As we have seen, their competitors consist of public and closely held companies, partnerships, sole proprietorship businesses, non-exempt co-operative companies and even Gov-

ernment enterprises. The incorporated competitors are subject under the Income War Tax and Excess Profits Tax Act to a tax of 40 per cent (30 per cent in the case of small companies) on income up to 116½ per cent of their standard profits and a tax of 100 per cent (less a 20 per cent post war refund) on income in excess thereof. Unincorporated business competitors of the co-operative associations are not subject to tax as business entities under the Income War Tax Act but their owners are subject to income tax on their business and personal incomes. Under the Excess Profits Tax Act unincorporated businesses are subject to a tax of 15 per cent of their total profits or, alternatively, the whole of their excess profits, whichever tax is the larger. Some of the direct competitors of the co-operative associations are non-exempt companies which carry on trade in ways which are, in many respects, analogous to the business methods of the exempt companies. These companies would be entitled to deduct payments in proportion to patronage where the terms on which they have sold or obtained a product involve a contractual obligation to make the payment, and it is not purely voluntary. These contractual payments are deductible whether paid in cash or credited to the accounts of the producers or customers as an irrevocable obligation.

Evidence Presented to Commission

The arguments relating to the taxation of co-operative associations as presented to the Commission at its hearings in each of the provinces are analyzed and summarized. The representatives of co-operative associations advanced two main grounds upon which they sought to be freed from tax. In the first place they urged that their associations performed certain public services for people in receipt of low incomes which ordinary companies did not attempt, or at least not to the same extent. Thus, they held that in the public interest they should be specially favoured. In the second place, it was alleged that they were not profit-making institutions by intention or practice; that their object was to perform services for their members at cost, giving rise to the argument that, in fact, they did not derive profits from their members. However, many recognized that some profits might arise and accrue to the members through the association from non-member business or deriving from investments.

On the other hand, the competitors of the associations contended that "the co-operative surplus is strictly analogous to the profits of an ordinary corporation, that the co-operative form of organization enables the association to secure a large volume of business and to effect economies in marketing; also that this surplus is attributable to the use of capital and the employment of labour and to the successful outcome of business risks. These are the factors, they argued, that enable ordinary companies to make profits." It was

held, further, that the co-operative associations perform precisely the same productive functions as ordinary companies, using the same sort of buildings and equipment, employing the same sort of labour, using the same technical methods, obtaining the goods they handle and process from the same sources and selling them in the same markets as do their non-co-operative competitors; that they are organized as limited liability companies; that they are organized and operated for the purpose of making a profit. Consequently, it was held that they should be assessed to taxes upon the same basis as an ordinary company.

I. Taxation of Trading Co-operatives

The Commission's recommendations were as follows:

(1) The Commission suggested the repeal of a portion of section 4 of the War Income Tax Act, which exempts from taxation, under stated conditions, farmers', dairymen's, fruit-growers', poultrymen's, fishermen's and other co-operatives.

(2) It was also suggested that both the Income War Tax Act and the Excess Profits Tax Act be amended to provide for the taxation of co-operative associations and organizations on the same basis as other persons in accordance with the following recommendations:

(3) That co-operative associations and organizations, joint stock companies, partnerships, and other bodies and persons shall be allowed to deduct, in computing taxable income, such amounts as patronage bonuses, patronage dividends, refunds of excess handling charges, discounts, rebates and other similar amounts which are paid or credited to their customers, in proportion to the quantity, quality or value of goods acquired, marketed, or sold or services rendered; provided that:

- (a) such amounts are paid in cash or its equivalent within six months after the annual meeting of the relevant fiscal period of the association, organization or company and within six months after the end of the relevant fiscal period of other businesses; or alternatively, that they are credited within the same period to each customer and exigible by him on giving such notice as may be deemed reasonable.
- (b) the statute or statutes under which any such co-operative association or organization is incorporated or registered, or its bylaws, or a contract with its customers, hold forth the prospect that payments will be made in proportion to patronage.

- (c) the company or other person holds forth the prospect to customers that payments will be made in proportion to patronage.
- (d) payments in proportion to patronage shall be at the same rate to all customers with respect to the same type or class of commodities, goods or services, with allowance for differentiation in class, grade or quality where appropriate.
- (4) That deductions from the gross proceeds of a customer's products be excluded from the income of the association, organization or other business, if applied against an obligation incurred by such customer to purchase shares, or to make other investment in the association; or if credited to the customer, and exigible by him on giving such notice as may be deemed reasonable.
- (5) That amounts credited in proportion to patronage and deductions from the gross proceeds of sale of the customer's products, which were not deductible for tax purposes when credited or deducted shall, nevertheless, be allowed as a deduction in the period during which they are paid to the customers.
- (6) (a) That interest, on any form of investment in, or loan to, the association or other taxpayer having a fixed date of maturity, be allowed as a deduction, provided such interest is exigible annually by the claimant or creditor at the rate fixed at the time such investment or loan was made.
- (b) That interest, on any form of investment or loan which is withdrawable on giving such notice as may be deemed reasonable be allowed as a deduction if exigible by the claimant or creditor at a rate fixed in advance.
- (7) That a newly formed association which obtains incorporation or registration under provincial co-operative legislation, or is incorporated as a co-operative under Dominion authority, for the purpose of producing and/or marketing natural products of its members or customers and/or of purchasing supplies, equipment, household necessities or services, for its members or customers and which is not owned or controlled, directly or indirectly, by an existing association, or a group of existing associations, shall, with the consent of the Minister, be exempt from income tax for its first three fiscal periods following the commencement of operations. An association claiming such relief should, nevertheless, be required to file annual returns in accordance with Part V of the Income War Tax Act in such form as may be determined by the Minister.

(8) That section 4, paragraph (y) of the Income War Tax Act be amended, if necessary, to include associations incorporated or registered under provincial co-operative legislation for providing co-operative housing service.

(9) That associations incorporated or registered under provincial co-operative legislation, or incorporated as a co-operative under Dominion authority, for the purpose of providing telephone services, distribution of electric power, or medical and hospital services, be exempt from income and excess profits taxes.

(10) That the Minister be given power to require all persons to make such annual returns of "patronage dividends" declared, or "deductions" made, as may be deemed desirable.

II. Credit Unions

It is stated in the report that "information furnished to the Commission makes it clear that co-operative societies organized for the purpose of accepting the savings of their members in the form of shares and deposits and for providing a source of credit for their members form an important and a rapidly expanding part of Canadian co-operative development." These "credit unions", or "caisses populaires", as they are called in Quebec, are also organized in regional and provincial federations, either for the purpose of serving as a medium for the deposit of surplus funds by member units and as a source of credit for them, or to provide inspection or educational services.

The report presents an analysis of credit union methods of operation and organization in Canada and their present position with respect to taxation, together with a summary of the arguments and considerations presented to the Commission.

The Commission recommended that the income of credit unions continue to be exempt from taxation under the Income War Tax Act and that sections of that Act be amended to make clear: (a) that it includes federations whose membership may comprise other credit unions, co-operative associations, parishes, school districts and other similar bodies; (b) that organizations excepted thereunder must derive their revenues primarily from loans made to members.

III. Mutual Insurance Organizations

Under the terms of the warrant establishing the Commission inquiry was made into the application of income and profits tax measures to organizations formed and operated on a "mutual basis"; and also, into the comparative

position in relation to taxation of persons engaged in business in direct competition with mutuals.

A number of briefs were filed and several witnesses appeared on behalf of mutual fire insurance companies and joint stock insurance companies engaged in fire, automobile and casualty insurance. Life and marine insurance companies were not included in the investigations.

The report contains a descriptive analysis of the several types of mutual insurance organizations, the methods and scope of the business they transact and their position with respect to taxation. Statistics compiled by the Dominion Bureau of Statistics are quoted with a view to disclosing the respective competitive positions of the mutuals and the stock companies. This comparative method is followed in summarizing the representations made to the Commission by the several witnesses.

The Commission recommended:

1. That the Income War Tax Act and The Excess Profits Tax Act (1940) be amended to provide for the taxation of mutual organizations carrying on the business in Canada, of fire, casualty and automobile insurance, in accordance with the recommendations which follow.

2. That dividends on, or refunds of premiums to policyholders, whether paid in cash or applied against renewal premiums, together with any unabsorbed premiums or premium

deposits returned to or payable to policyholders, and any other amount credited to a policyholder or subscriber in such a way that it is exigible by him on giving such notice as may be deemed reasonable, be allowed as a deduction in computing taxable income.

3. That joint stock companies and other insurers writing fire, automobile and casualty insurance, which pay dividends or make refunds of premiums to policyholders be allowed to deduct such dividends or refunds in computing taxable income.

4. That before giving effect to the foregoing recommendations the incidence of the tax on net premiums of mutual insurance organizations under the Special War Revenue Act, the exemption from taxation granted to marine insurance companies, and the treatment for income tax purposes of investment income in Canada accruing to British and foreign insurance companies, should be reviewed by the Government;

(5) That the income of any insurer, mutual or otherwise, shall not be liable to taxation when in any year the net premium income in Canada is derived, to the extent of not less than 50 per cent thereof, from the insurance of farm property and other property not protected by municipal or other fire fighting organizations, or is derived wholly from the insurance of churches, schools or other religious, educational and charitable institutions.

Canadian Vocational Training

THE following types of projects are now carried on under Canadian Vocational Training by the Dominion Department of Labour in co-operation with the Provincial Governments:—

- (1) The vocational and pre-matriculation training of discharged members of the Forces.
- (2) Training of apprentices.
- (3) Retraining of workers released from employment.
- (4) Training of foremen and supervisors.
- (5) Training of young people and assistance to students.
- (6) Dominion financial assistance to the provinces for vocational schools.

Cumulative Enrolment

From its inception up to November 30, 1945, the gross enrolment in all types of projects has been 447,093, made up as follows:—

Full-time pre-employment classes for war industry.....	108,405
Part-time classes for persons employed in war industry.....	35,256
Full-time plant schools in industry...	37,998
Industrial supervisors and foremen...	102,894
R.C.A.F. Tradesmen.....	65,213
Army Tradesmen.....	49,260
Navy Tradesmen.....	9,056
Discharged members of the Forces...	29,756
University students.....	9,255

Training of Discharged Members of the Forces

The greatly accelerated rate of demobilization plus the seasonal increase in unemployment has created among discharged members of the Forces a great increase in the demand for vocational training. This situation, added to the difficulty in obtaining buildings and equipment, has placed a very great strain on the existing training facilities during the last month, but additional centres are being opened and equipped as rapidly as possible.

At the end of December use was being made of about 55 special training centres, 40 municipal and provincial schools and about 100 privately owned trade and commercial schools. The special pre-employment centres are operating in 37 localities throughout the country, and provide a normal capacity of about 11,000 for vocational classes, 2,500 for commercial classes and 5,700 for pre-matriculation classes. These capacities can be increased about approximately 60 per cent by temporary crowding, or, in some cases, operating a second training shift. The above mentioned capacities do not include any accommodation in privately owned schools or in training on the job in industry. At the end of November the total number of veterans enrolled for all types of training was in excess of 17,500 representing an increase of over 5,000 during the month.

To facilitate the entrance of veterans into trades designated under Provincial Apprenticeship Acts, to arrange for their indentureship to employers and to supervise their training while on the job, special representatives have been appointed in several provinces to work in co-operation with the Provincial Apprenticeship authorities. These representatives are concerned mainly with the building and construction trades.

Training of Civilian Workers

Up to the end of December the Dominion-Provincial Agreements to provide training or retraining for workers released from gainful employment had been signed only in the Provinces of British Columbia, Alberta, Saskatchewan and Nova Scotia, but no actual training had been started.

Dominion Assistance to Vocational Schools

Up to the end of December, 1945, agreements had been signed in the Provinces of British Columbia, Alberta, Saskatchewan, New Brunswick and Prince Edward Island. There is a great demand for capital expenditures for both buildings and equipment, but the erection of new buildings will probably be delayed owing to the prevailing shortage of many building materials and supplies.

Meeting of Directors of Apprenticeship

Provincial Directors of Apprenticeship, meeting in Ottawa, agreed to attempt to establish uniformity in apprenticeship training throughout the Dominion, and also in the treatment of veterans entering designated trades.

The meeting took place November 13-14, 1945, at the Head Office of Canadian Vocational Training, and was under the chairmanship of Mr. R. F. Thompson, Dominion Director of Training.

It was decided to recommend an increase in the ratio of apprentices to journeymen in specified trades, especially those relating to building and construction. This would increase the number of veterans able to be trained as part of the rehabilitation program. Already several of the provinces in certain trades have granted credits to veterans, thus shortening their training period. It was recommended that the ratio be set for provinces rather than for individual employers. Promotion of the building trades program by means of a nationwide publicity campaign was projected in view of the extreme housing shortage for civilian and returning servicemen's needs, and which it was expected would continue providing the means of livelihood for great numbers of returned men when sufficiently trained through the apprenticeship plan.

Standardize Basic Training

In respect to standards of attainment and trade tests, it was felt that at present only the basic subjects of training could be standardized. This was owing to the fact that the type of work performed by the apprentice depends almost entirely on the contracts which the employer has been called upon to fill. This difficulty would of course disappear in time, as ultimately all branches of work in the trade would eventually be mastered by the trainee. Certificates of attainment would be issued trainees upon completion of their training; and might ultimately supersede those given under the Tradesmen's Qualification Act. Evaluation of credits would be determined on an individual basis by representatives of the trade concerned; the Dominion Department of Labour to pay the costs for adequate trade tests on approval of the provincial standards recommended. Wage rates should be set as a percentage of the journeymen's rate prevailing in the area, rather than be fixed arbitrarily in cents per hour.

The Provincial Directors present unanimously endorsed the necessity for regular periods of class instruction, in addition to the normal training on the job. This would aid in reducing the length of apprenticeship in some trades. At present this differs greatly from province to province.

Follow Bovey Commission

Consideration was given the recommendations on apprenticeship of the Royal Commission on Veterans' Qualifications, headed by the Honourable Wilfrid Bovey. It was hoped to implement as far as possible at this time, the recommendations of this Commission in regard to establishing trade standards, designation of more apprenticeship trades, standardization of trade tests and accelerated training. Previously taken care of through the agency of Canadian Vocational Training and the Provincial Department of Labour, were the two recommendations of the Commission with respect to supplementary training and a conference on apprenticeship.

Dominion-Provincial Co-operation

Mr. R. F. Thompson, Dominion Director of Canadian Vocational Training, characterized the conference as "a great step forward". He pointed out that while apprenticeship control came under Provincial legislation, successful carrying out of the whole scheme of industrial apprenticeship rested upon the mutual agreement between Dominion and Provincial Governments, contained in the Vocational Training Co-ordination Act, and P.C. 8993, of January 21, 1944, when an apprenticeship agreement lasting 10 years and providing substantial financial aid was concluded with the majority of the provinces. Under the terms of the agreement, the Dominion shared equally with the provinces in the costs of providing technical and practical training in schools, also on a full or part time basis for apprentices registered under the Provincial Act.

Veteran Can Retain Credit

He also noted that veterans if they did not wish to use their re-establishment credit towards vocational training, could be entered as civilian apprentices in which case their re-establishment credit would be available for use in the other connections provided.

Appointments to Vocational Training Advisory Council

Re-appointments to the Vocational Training Advisory Council, under the Vocational Training Co-ordination Act, 1942, were announced by Mr. A. MacNamara, Deputy Minister of Labour, on December 18, 1945. There were only two changes in the personnel of the Council, namely, Captain Henry G. Gonthier of St. Lambert, P.Q., replaced Colonel J. T. E. Gagnon of Quebec and Mr. R. A. Seasons, of Ottawa replaced Mr. J. Pigott of Hamilton. The following are the present members of the Council:—

Chairman—Dr. G. Fred McNally, Deputy Minister, Department of Education, Edmonton, Alberta.

Members of Council—Alphonse Begin, Esq., Publicity Agent, Confederation of Catholic Workers of Canada Inc., 231 Demontigny East, Montreal, P.Q.; Jean Bruchesi, Esq., Deputy Provincial Secretary, Quebec City, P.Q.; E. R. Complin, Esq., Personnel Director, Canadian Industries Limited, Montreal, P.Q.; N. S. Dowd, Esq., Executive Secretary, The Canadian Congress of Labour, 230 Laurier Avenue, West, Ottawa, Ontario; Lt.-Col. F. T. Fairey, Director of Technical Education, Department of Education, Victoria, B.C.; R. A. Seasons, Esq., W. G. Edge Company, Ottawa, Ontario; Mrs. E. D. Hardy, President, National Council of Women, 198 Second Avenue, Ottawa, Ontario; J. C. Herwig, Esq., Acting General Secretary, The Canadian Legion of the British Empire Service League, Dominion Command, Ottawa, Ontario; D. S.

Lyons, Esq., General Vice-President, International Association of Machinists, 806 Keefer Building, Montreal, P.Q.; N. C. MacKay, Esq., Director of Extension, Department of Agriculture, Winnipeg, Manitoba; Miss B. Oxner, Director of Women's Work, University of Saskatchewan, Saskatoon, Saskatchewan; Dr. Fletcher Peacock, Director of Educational Services, Department of Education, Fredericton, N.B.; Captain Henry G. Gonthier, President, Quebec Provincial Command of the Canadian Legion, St. Lambert, P.Q.; F. S. Rutherford, Esq., Deputy Minister, Department of Education, Parliament Buildings, Toronto, Ontario; Dr. F. H. Sexton, Director of Technical Education, Department of Education, Halifax, N.S.; C. B. C. Scott, Esq., General Personnel Manager, Massey-Harris Company, Limited, Toronto, Ontario.

The function of the Council, which consists of the Chairman and fifteen members (with one-third of the members retiring each year) is to advise the Minister of Labour on the training and retraining of veterans, the training of workers released from industry and the provision of Dominion financial assistance to the provinces for vocational schools. The members represent employers and workers, veterans, technical education, women's organizations and other groups. The council is co-ordinated with Canadian Vocational Training of the Department of Labour which administers the various types of vocational training included in the scope of the 1942 Act.

Higher Technological Education in England and Wales

POINTING out that "the position of Great Britain as an industrial nation is being endangered by a failure to secure the fullest possible application of science to industry, and that this failure is partly due to deficiencies in education", the report of the special committee on higher technological education, published on November 7, 1945, contains important recommendations. The committee, under the chairmanship of Lord Eustace Percy, was appointed in April, 1944, by the Minister of Education.

More and better students, and a substantial increase in teaching facilities and staff are needed, according to the committee, and this will require the co-operation of both industrialists and educators in detecting ability and selecting it for education and training. Industry and educational institutions training for industry have not received their fair share of the national ability because of two factors:

the tendency to direct boys of first-rate ability attending school until 18 away from "factory employment", and the lack of opportunity for boys leaving school before the age of 16 to return to university or other full-time education.

A national campaign to increase the prestige of the technical professions is recommended. The report suggests that the Juvenile Employment Bureaux of the Ministry of Labour, secondary school appointment machinery, and University Appointment Boards should all be used to supply information. Industry should also join in furnishing information. In addition, State scholarships for candidates from industry as well as from secondary schools are urged. Boys entering industry at or about the age of 16 should have a "path back to full-time education through the part-time courses of technical colleges."

The adjustment between technical college and university courses was also dealt with by the committee. Transfer at the matriculation, intermediate and post-graduate stages should be made possible. This could be achieved at the first stage by universities' recognizing technical college examinations, in whole or in part; at the second, by adding the fundamental sciences to the course for the Ordinary National Certificate so that the universities could recognize as the equivalent of their own intermediate examinations one taken by a technical college student around the age of 19; and at the third stage, by accepting a candidate's proved ability to "contribute to the discovery of new knowledge", whether or not he has a Bachelor's degree.

The committee proposes that colleges of technology, specially selected by the Minister of Education to develop courses comparable to degree standard, should be available for students passing from part-time to full-time education and not proceeding to the university. Qualifications of graduates should conform to national standards, and should be determined by the national council.

This national council is to be the central counterpart of the regional machinery which the committee proposes for the development of higher technological training. Regional

advisory councils, similar to those now in existence in some areas, would be established throughout England and Wales to co-ordinate technological studies in universities, colleges of technology, and other technical colleges in the region. These councils, in turn, should create regional academic boards of technology, composed of the academic heads of universities and technical colleges and of members of their teaching staffs. An advisory board "would advise the governing bodies of the participating institutions and the regional advisory council on the development and co-ordination of higher technological studies in each institution and the region as a whole": the board would also consult industry closely and frequently.

The members of the national council should be appointed by the Minister of Education, the committee considers, and should represent both the regional advisory councils and academic boards. It would consider the national aspects of regional policies, and would advise the Minister of Education and the University Grants Committee concerning them, without altering the responsibilities of those two authorities or restricting their freedom of communication with educational authorities and bodies.

*Activities of Unemployment Insurance Commission**

Analysis of Statistics for November—Insurance Registrations—The Fund—Decisions of Umpire—Work of Employment Offices

DURING the month of November claims for Unemployment Insurance benefit totalled 53,325, an increase of 16,608 over the 36,717 filed in October. The number recorded in November, 1944 was 11,798.

Persons signing the live unemployment register during the last six working days of November increased by 23,609 over the corresponding period in October, the number being 85,174 (64,592 males and 20,582 females) in November, 61,565 (43,638 males and 17,927 females) in October and 13,431 (9,324 males and 4,107 females) in November 1944. It may be noted that the gain in numbers during the last week of November as compared with October was proportionately much greater for males (48 p.c.) than for females (15 p.c.).

A total of 40,865 claims were adjudicated at Insurance Offices during November, 33,521 being considered entitled to benefit and 7,344 not entitled to benefit. Of those considered not entitled to benefit, the chief reasons for non-entitlement were: "insufficient contributions while in insurable employment" (3,304 cases); "voluntarily left employment without just cause" (2,239 cases); "loss of work due to a labour dispute directly affecting the claimant" (713 cases); "discharged for misconduct" (587 cases).

One or more benefit payments were made to 61,193 persons during November compared with 43,775 beneficiaries during October and 7,114 in November, 1944. These 61,193 persons were paid a total of \$2,509,610 for 1,244,023 compensated unemployed days in November as against the 43,775 persons paid \$1,709,164 for 840,327 days during October and 7,114 persons paid \$179,001 for 95,720 days in November, 1944.

The average duration of the unemployment compensated was, then, 20·2 days in November, 19·2 days in October and 13·5 days in November, 1944. The average amount of benefit paid per beneficiary was \$40·82 during November, \$39·04 during October and \$25·16 during November, 1944. The average amount of benefit paid per compensated day of unemployment was \$2·02 in November, \$2·03 in October and \$1·87 in November, 1944.

Insurance Registrations

Reports received from Local Offices of the Unemployment Insurance Commission showed that as at November 30, 1945, 2,981,757 em-

ployees were issued with insurance books and had made contributions to the fund at one time or another since April 1, 1945, an increase of 98,448 since October 31, 1945.

As at November 30, 1945, 152,818 employers were registered as having insurable employees, an increase of 2,077 since October 31, 1945.

Registrations as at November 30, 1945 by regions are given in Table 1.

Unemployment Insurance Fund

The total Employer-Employee contributions for November amounted to \$5,283,649·49 as compared with \$6,267,913·20 for the same month in 1944. The decrease is largely due to the fact that in November, 1944, arrears of contributions amounting to \$940,000·00 were received from various Government departments.

Benefits paid during November, 1945, amounted to \$2,508,616·02, the largest amount for any month to date. This figure shows an increase of \$800,271·16 over the previous month and an increase of \$2,330,477·98 over the figure for November, 1944, when benefit payments amounted to only \$178,138·04.

Of the total revenue of \$9,329,194·39 during November, 1945, 26·8 per cent was required for benefit payments, leaving a net increase to the fund of \$6,820,578·37 during the month.

Control of U.I.C. by Minister Extended

Order in Council P.C. 7994, dated September 4, 1942, among other things, gave the Minister of Labour control and supervision of the officers, clerks and employees of the Unemployment Insurance Commission for the duration of the war, or until such previous time as might be fixed by proclamation.

The purpose of this action was to enable the Minister to utilize more effectively the personnel of the Commission in administering National Selective Service regulations, as well as measures undertaken for the re-establishment of war veterans and civilian war workers.

As the Minister was of the opinion that this authority should continue to be vested in him during the transition period, Order in Council P.C. 7377 was passed on December 21, 1945 extending such authority until March 31, 1946.

* Statistics (including tables) based on returns supplied by the Unemployment Insurance Commission and Dominion Bureau of Statistics.

Work of Employment Offices Lauded

"The Local (Employment) Office can become as much a part of the community as the public library, the school, or the town hall, if it gives service", it was declared by the Honourable Humphrey Mitchell, Minister of Labour and Arthur MacNamara, Deputy Minister in a seasonal message to National Employment Service staffs in local offices across Canada.

Paying tribute to the work the National Employment Service had performed during the past year, the Minister and Deputy Minister stressed the obligation to convey to the "man in the street" the value of the free and efficient service which is thus afforded him. They noted that remaining wartime National Employment Service controls are now "negligible".

The text of the message reads in part as follows:—

"During the war, the Employment Service operated with one object in view, and not only had public support but legal sanctions to make its task easy.

"The controls which will remain in the new year will be negligible; employers will be thinking of their competitive positions and of the productive efficiency of their workers; security and the prospect of advancement will be in the minds of workers, and the thinking of all will be more concentrated on individual issues and problems.

"In this season of goodwill towards man, it should be realized that the Employment Service can only prosper if the man in the street—employer and worker—believes that it can be of genuine service to him. If he believes it means an expenditure of time with no end-result or benefit to him, the Employment Service will find itself starved of the nourishment which sustains it. The Local Office can become as much a part of the community as the public library, the school, or the town hall, if it gives service.

"During the war years the type of job you were called upon to do was magnificently performed, and all credit is due to you for it. We know that with a true spirit of goodwill and co-operation you can be just as successful with the new techniques necessary to meet new problems."

Digest of Selected Decisions of the Umpire Under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945 number of the LABOUR GAZETTE and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike brief statements of the principles upon which insurance against unemployment operates in Canada and of actual facts in specific cases coming before the Umpire on appeal.

As announced in the earlier issues, the selected decisions are being published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C.

CU-B. 41

(June 15, 1945)

The claimant, who was employed by a railway company, was suspended from his employment on medical grounds and applied for benefit. When offered employment in railroad work, he refused to apply on the ground that he had to obtain a release from the medical officer of the company—HELD: The Unemployment Insurance Act, 1940, is a scheme for insurance against unemployment and not for insurance against sickness. The claimant was clearly not capable of work and therefore could not qualify for benefit under the Act.

The material facts of the case are as follows:—

The claimant, a married man, aged 43 years, was employed as Station Master and checker by a railway company at a salary of \$152.93 per month for some 25 years. On June 20, 1944, the claimant left on vacation with pay and returned to his employment on July 5. On July 6 he was suspended from his employment on medical grounds (blood poisoning and nervous condition) and remained suspended until December 14, 1944, when the Medical Board of the railway company decided to retire him. The claimant made a claim for benefit on August 10, 1944 and asked that his claim be antedated to July 5, 1944 but his demand for antedating was refused and his

claim for benefit was allowed as from August 10, 1944.

On December 20, 1944, the Local Office offered the claimant employment as a packer and helper at an equipment depot of one of the Armed Forces at a salary of \$90.00 per month plus cost-of-living bonus. He refused to apply for this employment on the ground that he had to obtain a release from the medical officer of the railway company. The Insurance Officer was of the opinion that the claimant had been notified of an employment which was suitable within the meaning of the proviso to Section 31 (b) (iii) of the Act, in view of the fact that there was no longer any expectation of his returning to his usual employment. The Insurance Officer disqualified the claimant for a period of six weeks beginning December 20, 1944.

From this decision the claimant appealed to a Court of Referees and was granted an oral hearing. On January 12, 1945 the Court of Referees unanimously disqualified the claimant because he had not shown good cause for failing to apply for the employment which he was offered.

Following his appeal, the claimant submitted a doctor's certificate which reads as follows:—

This is to certify that this patient is unable to follow his occupation on account of anxiety neurosis. Because of this condition, he was laid off from his work at the railway company. Whether this is a permanent condition or not, it is impossible to say, but he was advised by a specialist that he should have a period of at least six months' rest.

On January 29, 1945, the claimant was again notified by the Commission of the same employment with the same employer as the employment offered to him on December 20, 1944 and the claimant again refused to apply for or accept the position, and the Insurance Officer disqualified the claimant for a period of six weeks beginning January 29, 1945.

From this decision the claimant appealed to a Court of Referees, which heard the case on written submission. On February 28, 1945, the Court of Referees unanimously disqualified the claimant for six weeks on the ground that the claimant had not shown good cause for refusing an offer of suitable employment.

The association of employed persons of which the claimant was a member appealed to the Umpire from the decisions rendered by the Court of Referees.

DECISION

The Umpire's decision was that the claim should be disallowed and gave as his reasons that:

I have reviewed the submissions and find that under the circumstances the employment offered to the claimant was suitable within the meaning of the proviso to Section 31 (b) (iii) of the Act, and that the claimant has not shown good cause for refusing to apply for or to accept the employment offered. It appears to me that the claimant, in refusing to apply for the employment on the ground that he could not do so before obtaining a medical certificate from the railway company doctor, clearly showed that he was not available for work. The Unemployment Insurance Act, 1940 is, as its name applies, a scheme for insurance against unemployment and not for insurance against sickness, and one of the statutory conditions for the receipt of benefit is that the claimant be at all times capable of and available for work.

CU-B. 39

(June 15, 1945)

The claimant, a married woman, refused an offer of full-time employment on the ground that she registered for part-time temporary work only and the wages offered were lower than that which she had previously obtained in another district—HELD: That the rate of wages to be considered in respect of an offer of employment is the rate of wages prevailing in the district where the employment is offered and not in the district where the claimant previously worked, and that the claimant had so limited her sphere of availability as to render herself, for all practical purposes, not available for work.

The material facts of the case are as follows:—

The claimant, a married woman, aged 28 years, was employed as a stenographer by an Association of Registered Nurses from July 24, 1944 to August 5, 1944 at a salary of \$18.65 per week. Her hours of work were from 9.00 a.m. to 3.00 p.m. She was laid off on August 5, 1944, as her work was only temporary during the regular stenographer's vacation. The claimant moved to a city in another province, where, on October 30, 1944, she registered for employment at the Local Office of the Commission, as a stenographer or bookkeeper, and at the same time filed her claim for benefit.

On the 10th day of November, 1944, the claimant was notified by the Local Office of the Commission of a position as a clerk with a life insurance company, the wages offered

being at least \$75.00 per month, depending on qualifications. The claimant refused to apply for the position, giving as her reason "Position is full-time and I am registered for part-time temporary work only". The hours of work were from 8.30 a.m. to 4.30 p.m. The claimant also stated that she wished to be home to get her husband's meals.

The Insurance Officer disallowed the claim and disqualified the claimant for 6 weeks, from November 10, 1944, because she had without good cause refused, or failed to apply for a suitable position which was duly notified to her by the Local Office of the Commission. The disqualification was also imposed on the additional ground that in refusing to accept any but part-time work the claimant had rendered herself virtually unavailable for work.

From this decision the claimant appealed to a Court of Referees and added to her previous reasons for refusing the employment the additional reason that the wages were much below the standard she was accustomed to receive, even for part-time work.

The Court of Referees unanimously allowed her appeal on the grounds that the remuneration offered was on a scale less than that which she had received in Winnipeg, especially when comparing the hours of work. It is significant to note that the claimant's previous remuneration was for a temporary position, that of replacing the regular stenographer for a period of two weeks. The Court of Referees stated that it did not feel called upon to deal with the issue of availability as they found that the employment was not suitable.

From this decision the Insurance Officer appealed to the Umpire on the grounds, firstly, that consideration of the remuneration must be based on the rate of wages prevailing in the district where the employment was offered and not in the district where the claimant previously worked and, secondly, that the Court of Referees should have dealt with the question of the claimant's availability for work.

DECISION

The Umpire's decision was that the claim should be disallowed and gave as his reasons that:

The first ground of appeal raised by the Insurance Officer is that consideration of the remuneration must be based on the rate of wages prevailing in the district where the employment was offered, and not in the district where the claimant previously worked. I agree with the Insurance Officer on this point. It was established that the prevailing rate of wages in the district of London for stenographers is from \$75.00 to \$90.00 per month.

The second ground of appeal is that the Court of Referees should have dealt with the question of the claimant's availability for work. I also agree with the Insurance Officer on this point. As I have stated in previous decisions, the question of suitability of employment and availability for work are closely inter-related. I feel that the claimant's domestic responsibilities were not such as to render the employment offered unsuitable on account of the hours of work, or for the reason that she could not be home to prepare her husband's meals.

The claimant was not willing to accept full-time work and it appears also that she would not accept permanent part-time work. In view of these circumstances I find that the claimant has so limited her sphere of availability as to render herself, for all practical purposes, not available for work. I therefore find that the claimant has, without good cause, refused or failed to apply for a situation which was suitable in her case and which was duly notified to her by the Local Office of the Commission.

Report of Workmen's Compensation Board of Ontario

The Annual Report of the Workmen's Compensation Board of Ontario for 1944 was issued recently. A brief summary giving the more important features of the report appears below.

Accidents reported to the Board in 1944 numbered 123,820, as compared with 131,458 during 1943. Of the number reported in 1944, 116,381 received compensation, or medical aid, or both. They included 288 deaths, 2,191 permanent disability cases, 45,822 temporary disability cases, and 68,080 medical aid only cases. In addition, the Board in 1944 opened for further award 1,027 claims which had been settled previously.

During 1944, the payrolls of 25,001 employers covered by that part of industry that is under collective liability (Schedule 1) was \$1,169,052,000, as compared with \$1,076,780,000 of 23,950 employers during 1943, an increase of 8.6 per cent. The average rate of assessment was \$1.02 for each 100 of payroll; the corresponding figure for 1943 was \$1.03. The total receipts for the year 1944 including adjustments, refunds and penalties were \$12,037,995.13.

The compensation and medical aid for Schedule 1 industries, including estimates for what was still to be awarded for accidents happening during the year and for prior years' accidents amounted to \$9,768,934.17. There were other outlays of \$1,195,776.22, being \$565,113.54 charged for administration (Schedule 1) (including \$44,905.50 for adjustment of prior years' expenses) \$160,343.34 for other expenses of non-administrative character, \$22,876.11 for mine rescue work, \$328,033.65 for grants to ac-

cident prevention associations organized under the Act, \$106,999.96 for the Board's clinic, \$11,208.25 for the special arrangements with the Toronto General Hospital, and \$1,201.37 for outlays under Section 8 of the Act. The total expenditures and charges for the year, including liability for pneumoconiosis of \$1,787,238.27 were \$12,751,948.66.

The total amount of compensation awarded in Schedule 2 industries (industries in which the employer is individually liable for accidents to his workmen) and Crown cases during 1944 was \$2,278,793 as compared with \$2,264,507.50 during 1943. Of this \$2,278,793, \$1,249,520.42 was for Dominion Crown cases and \$113,410.40 was for Provincial Crown cases. Employers in Schedule 2 were assessed \$80,446.50 as their share of the expenses of administering the Act.

The gross expenses of the Board for 1944 were \$654,361.28. Of this amount \$80,446.50 was charged to Schedule 2 and Crown employers, \$15,620.65 to Safety Associations, \$27,089.90 to silicosis account, \$1,089.34 to mine rescue work, \$4,666.50 to special hospital account and \$5,240.35 to clinics. The balance, \$520,208.04 was charged to Schedule 1, and is 5.10 per cent of the benefits awarded in Schedule 1 during 1944.

The balance in the Pension Fund at the commencement of 1944 was \$32,387,801.89. During the year, \$3,800,420.15 was transferred for pension awards; \$1,648,316.44 interest was added; and \$3,013,917.49 was paid for pensions. The balance in the fund at the end of the year was \$34,822,620.99.

Employment, Hours and Earnings

Summary

R E P O R T S received in the Department of Labour during the past month gave the following information concerning employment, hours and earnings in Canada.

Survey of Civilian Labour Force.—The first of a series of surveys of the civilian labour force to be undertaken quarterly by the Dominion Bureau of Statistics indicates that in the week November 11-17, 1945, there were 4,364,000 persons employed, and 167,000 unemployed, making a total labour force of 4,531,000.

Employment and Payrolls at the beginning of November, 1945, as reported by employers.—Industrial activity throughout the Dominion showed an improved movement at the beginning of November, when the 15,562 firms co-operating in the Dominion Bureau of Statistics monthly survey of employment and payrolls reported the addition of 25,340 persons to their staffs, bringing these up to an aggregate of 1,750,215.

Based on the 1926 average as 100, the general index number of employment at November 1 was 171.1 as compared with 168.7 at October 1, 1945 and 183.8 at November 1, 1944.

The Bureau's reports come from firms employing fifteen or more employees, representing practically all industries except agriculture, fishing, hunting and highly-specialized business operations.

The average weekly per capita earnings was \$31.97 at November 1, 1945, as compared with \$32.08 at October 1, 1945, and \$32.29 at November 1, 1944.

Man-Hours and Hourly Earnings, October 1, 1945.—Average hours per week worked by hourly-rated wage-earners employed in manufacturing were 44.7 at the beginning of October, as reported by employers. Average hourly earnings were 67.8 cents.

Unemployment as reported by the Unemployment Insurance Commission.—Claims for unemployment insurance benefit during November numbered 53,325, an increase of 16,608 over the preceding month.

Report on Employment Conditions, December, 1945.—During December, the supply of available labour continued to increase,

while, at the same time, the demand for workers maintained a steadily downward trend. At December 20, manpower requirements of Canadian industries, exclusive of agriculture, totalled 79,780 (53,585 men and 26,195 women) as compared with 103,687 at November 22, four weeks earlier. The decline in labour demand is due to the seasonal slackening in manpower requirements and to the fact that many vacancies have been filled by ex-servicemen and former war workers. Labour supply, as indicated by the number of unplaced applicants registered at employment offices, increased by 13,206 during the month and at December 21 totalled 185,274 (150,583 men and 34,691 women).

Applications for Employment; Vacancies and Placements; November, 1945.—Reports received from the National Employment Service Offices of the Unemployment Insurance Commission during the four weeks November 2 to November 29, 1945, showed losses in the average number of placements made daily both when compared with the previous period of five weeks duration and with the four weeks November 3 to November 30, 1944. Under the first comparison, forestry and logging and trade showed moderate increases, mining, and finance and insurance slight inclines and all other industrial groups decreases, the most pronounced loss being in manufacturing. When compared with the four weeks ending November 30, 1944, a substantial gain in construction and minor increases in mining, agriculture, and fishing, hunting and trapping were greatly offset by reductions in all other industrial divisions, the most noteworthy being in manufacturing, forestry and logging, trade and services. During the period under review there were 165,536 vacancies reported, 241,984 applications for employment and 113,390 placements effected in regular and casual employment.

Unemployment in Trade Unions.—The percentage of unemployment among trade union members increased to 1.4 at the close of the quarter ended September 30. At the end of the previous quarter the percentage was 0.5 and at the end of September, 1944, was 0.3.

Survey of Civilian Labour Force Undertaken by Dominion Bureau of Statistics

IN the week of November 11-17, there were 4,531,000 persons in the civilian labour force in Canada, consisting of 4,364,000 employed and 167,000 unemployed, according to estimates released early in January by the Dominion Bureau of Statistics. These estimates are based on the first of a series of quarterly surveys of the labour force which was recently completed. The survey, which covers the non-institutional, civilian population, 14 years of age and over, also reveals that there were 3,799,000 non-workers, such as students, housewives and persons who are retired or unable to work.

Beginning on November 19, between 20 and 25 thousand sample households were visited by about 300 temporary enumerators, who collected information on the activity of each adult member of the household during the previous week. Everybody 14 years of age or more was classified on the basis of major and subsidiary activities during the survey week. Employed persons are defined as those who had a job, not counting people primarily engaged in keeping house. People who did not have a job and whose main activity was looking for work were regarded as unemployed. Together, the employed and unemployed constitute the labour force, while everybody else is classed as a non-worker. It is estimated that there are 232,000 housewives, students and retired persons, who work part-time, included in the total of the employed. On the other hand, the survey indicates that there were 13,000 persons classed as employed who were also looking for a new job. While such people are not unemployed, strictly speaking, because they did some work in the survey week, they are a significant part of the labour force.

Information was obtained for each individual reported as looking for work concerning the length of time he had been looking for a job. The following tabulation shows that in most cases the period of seeking work is of relatively short duration:

Months looking for work	Number of persons
Under 1	30,000
1-3	125,000
4-6	17,000
7-12	5,000
more than 12	less than 3,000

A question was also asked to determine whether those looking for work were included in the unemployment insurance system. The results indicate that 110,000 were contributing to unemployment insurance when they were last working.

In order to find out whether people are partially or fully employed, everybody who worked one hour or more was classified according to the number of hours worked in the survey week, as shown in the following table:

Hours worked	Number of persons
Under 14	101,000
15-34	314,000
35-44	1,094,000
45-54	1,654,000
55 and over	1,110,000

In addition, the employed total includes 91,000 persons who had a job or business but who did not work because of temporary illness, bad weather, holidays, labour disputes or temporary lay-off.

National estimates of the number of men and women in the different labour force categories reflects the wartime increase in the number of women workers. The estimated sex breakdown is as follows:

	Employed	Un-employed	Non-workers
Men	3,248,000	136,000	649,000
Women ...	1,116,000	31,000	3,150,000

The distribution of men and women in the labour force between agricultural and non-agricultural occupations shows the significant part played by women in agriculture. In the following tabulation, the women employed in agriculture included farm housewives who spent more than 20 hours a week doing work which actually contributed to the operation of the farm:

	Agricultural	Non-agricultural
Men	893,000	2,478,000
Women ...	168,000	978,000

The unaccounted-for part of the labour force consists of young people or veterans of World War II who are now in the labour market but have never had a job and cannot be classified as agricultural or non-agricultural.

The regional distribution of the employed, unemployed and non-workers is shown in the following table:

	Employed	Un-employed	Non-workers
Maritime			
Provinces	370,000	16,000	403,000
Quebec ...	1,247,000	63,000	1,097,000
Ontario ...	1,504,000	50,000	1,263,000
Prairie			
Provinces	902,000	22,000	702,000
British Columbia	341,000	16,000	334,000

Caution must be exercised in interpreting estimates of the number of persons in relatively small classes since the precision of estimates becomes less as the number of persons in the particular class being estimated decreases.

The composition of the non-working population 14 years of age and over, broken down by sex, is estimated to be as follows:

	Men	Women
Permanently unable or too old to work	141,000	115,000
Keeping house	14,000	2,619,000
Going to school	293,000	283,000
Retired or voluntarily idle	179,000	123,000
Other	22,000	10,000

Many of the persons classified as "other" are recently discharged veterans who were taking a holiday before returning to their normal civilian occupation or starting to look for a job. Apart from this group, who are definitely not in the labour force, there were 232,000 persons who were going to school, keeping house or normally retired, who worked part-time and are, therefore, counted as employed, although some of them are on the fringe of the labour force.

The occupational status or class of worker of everybody in the labour force, including the unemployed and part-time workers, was the subject of a special question in the survey. The estimated numbers in each class of worker, broken down by sex, are as follows:

Class of worker	Men	Women
Paid worker for a private employer	1,963,000	756,000
Paid worker for federal, provincial or local government	230,000	125,000
Workers on their own account who have their own business, farm or profession, <i>without</i> paid employees	775,000	67,000
Employers, who have their own businesses, farms or professions, with one or more paid employees ..	180,000	11,000
Unpaid family workers on farms or in business ...	202,000	180,000
Unspecified	21,000	7,000

Again, a substantial number of recent entrants into the labour force have no occupational status since they have never worked.

Basis of Survey

The labour force survey covers all but a small proportion of the civilian non-institutional population 14 years of age and over. It

is estimated that 8,330,000 persons in this category are included in the sampling scheme. Excluded are Indian reserves and certain remote areas, but the omission amounts to only about 2 per cent of the population covered.

The selection of a random sample of households in Canada is a highly technical and complex operation. It is essential that all households have the same probability of inclusion and that this probability be known. As might be expected in a random sample, the households designated for interview are scattered all over Canada from the small islands off Prince Rupert to the islands off the coast of Nova Scotia. Some responsible member of each household is interviewed, and on the basis of information obtained about all members of the household, regional and national estimates of the size and composition of the labour force are calculated. As a preliminary step in selecting the sample households, the country was divided into primary sampling units which consist of groups of adjoining townships or municipalities. Within each of the five regions (Maritime Provinces, Quebec, Ontario, Prairie Provinces and British Columbia) the primary sampling units were classed into groups (i.e. stratified) on the basis of similarity of industrial, agricultural or population characteristics. Then, in a region, one primary sampling unit was selected to represent each stratum. For example, one primary sampling unit was chosen to represent the fishing stratum in Nova Scotia and one the dairying stratum in Ontario. These sample areas, representing all other areas of similar characteristics, were chosen at random in such a way that the probability of their selection was proportional to their population in 1941. In addition, all cities whose population was 30,000 or more in 1931, were included. Within each of the sample areas, of which there are about 100, some specified proportion of the households was selected for interview. In rural and open country areas, it was necessary to have enumerators list all households in certain sections to permit the selection of a random sample. In the cities, sample blocks were chosen at random, and a random selection of households was enumerated in each block chosen. The proportion of households to be sampled was fixed so as to yield approximately 1 per cent of the households in the area covered by the sample.

The introduction by the Dominion Bureau of Statistics of modern methods of population sampling to determine the size and composition of the Canadian labour force is a recognition of the importance of current information about employment and unemployment in measuring

the progress of reconversion. The quarterly survey of the labour force incorporates a number of recent advances in sampling technique, many of which were developed at the U.S.

Bureau of the Census. It took nearly a year to design the present sample, but it is expected that the results of the various surveys which use this design will be available very quickly.

Employment and Payrolls at the Beginning of November, 1945

INDUSTRIAL activity throughout the Dominion showed an upward movement at the beginning of November when the 15,562 firms co-operating in the Dominion Bureau of Statistics' monthly survey of employment and payrolls reported the addition of 25,340 persons to their staffs; these aggregated 1,750,215. The increase, amounting to 1.5 per cent, was accompanied by a rise of 1.1 per cent in the weekly salaries and wages disbursed at November 1 by these establishments. It is noteworthy that the present advance in employment was only the second indicated during 1945, the trend, except at July 1, having been generally unfavourable in preceding months of the year.

Expansion in industrial employment at November 1 is contra-seasonal according to the experience of pre-war years. Beginning with 1939, however, there have been annual increases at that date; the latest gain is the largest for November 1 since that of 1940, greatly exceeding the advance indicated in the late autumn of 1944.

The improvement at the beginning of November, 1945, as compared with October 1 took place in the non-manufacturing indus-

tries, there being considerable curtailment in manufacturing, mainly in iron and steel and vegetable food factories, from which 8,743 and 6,741 workers were released, respectively, by the plants furnishing data. There were also declines in the non-ferrous metal, chemical, lumber and some other divisions. The latest recession was decidedly smaller than that indicated at the first of October. Among the non-manufacturing industries, logging showed substantially greater seasonal activity, some 21,700 men having been taken on by the co-operating camps, in which the expansion greatly exceeded the average for the time of year. Mining, communications, local transportation, construction and trade also afforded considerably more employment. In the last-named, the reported gain of nearly 5,700 persons was larger-than-normal for November 1. Reduced activity was indicated in the service division, in which the loss was below-average in extent.

Based on the 1926 average as 100, the general index number of employment at the beginning of November was 171.1, as compared with 168.7 at October 1, 1945, and 183.8 at November 1, 1944. The decrease of 6.9 per

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting in comparison with the average number of employees they reported during the calendar year 1926 as 100.

cent in the latter comparison was accompanied by that of 7.7 per cent in the index number of payrolls. After adjustment for seasonal influences, the latest index number of employment stood at 163.7, as compared with 160.5 in the preceding month.

Payrolls

The firms whose returns were tabulated reported the payment of \$55,951,915 salaries and wages at November 1, a sum which exceeded by 1.1 per cent the amount they had disbursed at the beginning of October. The weekly earnings averaged \$32.08 at October 1 and \$31.97 at November 1, 1945, as compared with \$32.29 and \$31.60 at the same date in 1944 and 1943, respectively.

If the statistics for financial institutions are included, the latest survey of employment and payrolls shows that the number of persons in recorded employment was 1,819,947, as com-

pared with 1,794,247 at the beginning of October. The sums received as weekly salaries and wages by these persons at November 1 were stated as \$58,332,476, while the October 1 aggregate was \$57,697,620. The average earnings per employee in the nine industries, including finance, were \$32.05; this was 11 cents lower than the per capita figure indicated at the beginning of October. At November 1, 1944, the average in the nine leading industrial groups was \$32.30, while in 1943, the November 1 figure was \$31.59.

Table II summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the 20 leading industrial cities, and gives comparisons as at October 1, 1945, and November 1, 1944. Table I gives a monthly record for the eight leading industries as a whole and for manufacturing, showing the

movements of employment and payrolls in the period since 1941.

The indexes of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and

payrolls, the index numbers of employment have been converted from their original base 1926=100 to June 1, 1941, as 100. The table shows that, in the period for which data are available, there has been an increase of 12 per cent in the number of persons in recorded

¹ This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

employment in the eight leading industrial groups (listed in Table II), while the weekly earnings of these persons have risen by 39.3 per cent. Including finance, the gain in employment from June 1, 1941, to November 1, 1945, has amounted to 12.3 per cent, and that in payrolls, to 39.2 per cent. The reasons previously given for the relatively greater rise in the salaries and wages than in employment may again be stated: (1) the concentration of workers in the more highly-paid heavy manufacturing industries which still exists despite recent losses; (2) the payment of war-time cost-of-living allowances to the majority of workers; the rates at which these allowances were calculated were increased on more than one occasion before their incorporation in the basic wage rates from February 15, 1944; (3) the progressive up-grading of employees as they gained experience; and (4) the granting of higher wage rates in numerous cases.

Until the present survey, the expansion of employment and payrolls in manufacturing in the period of observation has been on a much greater scale than that in the non-manufacturing industries, some of which were adversely affected by wartime labour conditions. At

November 1, however, the index of employment in factories showed a smaller advance than that in the remaining industrial divisions taken as a unit. Thus the latest manufacturing index was higher by 10.9 per cent than that of June 1, 1941, while the index of payrolls was higher by 39.3 per cent; in the same comparison, the non-manufacturing industries generally have shown an increase of 13.3 per cent in the case of employment and of 39.3 per cent in the case of payrolls.

In regard to the marked variations shown in the average earnings of workers in the different industrial classes, it must be borne in mind that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry obviously is also an extremely important factor.

¹ The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

Man-Hours and Hourly Earnings, October 1, 1945

BETWEEN November 1, 1944, and October 1, 1945, average hours per week worked by hourly-rated wage-earners employed in manufacturing declined from 46.3 to 44.7. During the same period average hourly earnings dropped from 70.3 to 67.8 cents, and average weekly wages declined from \$32.55 to \$30.31.

Since late in 1944 the Dominion Bureau of Statistics has been obtaining information from employers on hours of work and hourly earnings.

Employers are asked to furnish statistics of man-hours on behalf of those wage-earners for whom they keep a record of aggregate hours worked, so that the data relate, in the main, to persons employed at hourly rates. Information for salaried employees is purposely excluded, while in many cases, statistics of man-hours are not available for certain classes of wage-earners, whose earnings, like those of most salaried employees, are not directly dependent upon the number of hours worked; examples of wage-earners most commonly excluded are route drivers, truck men, piece workers in many establishments, etc. In addition, some employers do not keep a record of man-hours for any classes of employees. Accordingly, the number of workers for whom statistics are given in the present report is smaller than the total number of employees, (salaried personnel and wage-earners) for whom statistics of employment and payrolls are obtained in the monthly surveys on these subjects.

Man-Hours.—The statistics of man-hours include overtime, as well as the hours worked by part-time and casual workers. Hours credited to persons absent on leave with pay in the reported pay period are included in the statistics as though the hours for which payment was made had been worked.

Wages.—The wages reported represent gross earnings before deductions are made for taxes, unemployment insurance, etc.; they do not, however, include the value of board and lodging which in some cases is part of the remuneration of workers. Incentive and production bonuses and overtime payments are included, as are sums paid employees absent on leave with pay during the pay period for which statistics are given. The figures of average weekly wages result from the multiplication of the average hours worked during the period of observation, by the average hourly earnings reported in the same period.

Pay Periods.—Statistics of man-hours and hourly wages reported for periods exceeding one week in duration are reduced by the ap-

propriate proportions to obtain for tabulation purposes the number of hours worked and the hourly earnings in one week in the indicated pay period; such information is then added to the data furnished by employers who pay on a weekly basis, so that, in all cases, the tabulated data represent the situation in one week in each month.

Situation at October 1, 1945

The number of hourly-rated wage-earners employed in manufacturing, the total hours worked by such persons and their aggregate earnings showed declines in the week ending on or about October 1, according to information from 6,150 plants compiled by the Dominion Bureau of Statistics. These establishments reported 727,962 workers paid at hourly rates; the hours they had worked in the period under review amounted to 32,544,511, for which a total of \$22,063,037 was paid. In the week preceding September 1, the 776,120 hourly-rated wage-earners on the staffs of these firms had worked an aggregate of 34,243,099 hours, for which they received \$23,660,586 in payment. Thus there was a decrease of 6.2 per cent in the number of hourly-rated wage-earners, of five per cent in the total hours worked, and of 6.8 per cent in the weekly wages disbursed. The average hours per worker, on the other hand, rose from 44.1 in the week preceding September 1, to 44.7 in the week ending on or about the first of October, but the average hourly earnings were lowered from 69.2 cents in the former, to 67.8 cents in the latter period of observation.

The reduction in the average hourly earnings in manufacturing as a whole during the month (the fifth consecutive decline recorded), was due in large measure to further important changes in the industrial distribution of wage-earners during the period of conversion from wartime to peacetime production, but also partly resulted from seasonal causes, while industrial disputes likewise contributed to the result. These factors affected particularly the industries classed in the durable manufactured goods group, in which the co-operating establishments reported a reduction of nearly 53,800 workers employed at hourly rates; the average time worked rose by seven-tenths of an hour, while the average hourly earnings declined by one cent. On the other hand, heightened activity, partly seasonal in character, was indicated in many of the non-durable manufactured goods industries, in which the reported number of hourly-rated wage-earners was, on the whole, greater by approximately 5,600, or 1.5 per cent; there was an advance

of 2.5 per cent in the total hours worked, and of 1.7 per cent in the aggregate weekly earnings of hourly-rated employees in this category. The average hours rose by half an hour, but the average hourly rates fell by two-fifths of a cent.

*Table 1 summarizes the statistics of average hours per week and average hourly earnings in manufacturing during the period for which such information is available. The latest figures are subject to revision.

TABLE 1—AVERAGE HOURS WORKED, AVERAGE HOURLY EARNINGS AND AVERAGE WEEKLY WAGES OF HOURLY-RATED WAGE-EARNERS IN MANUFACTURING

Sept. 1	44.1	69.2	30 52
Oct. 1	44.7	67.8	30 31

* The averages at January 1 and April 1 of the present year were affected by the time lost during the year-end and the Easter holidays, respectively.

Average Hours Worked.—For the first time since the beginning of May, there was an increase in the average hours worked in manufacturing as a whole, the mean in the week ending October 1, being 44.7 hours, as compared with 44.1 at September 1; the latest figure is the highest in five months, although it was lower than in any earlier month in the brief period of observation, except January 1 and April 1, 1945, when loss of working time during the year-end and Easter holidays respectively, had greatly affected the situation. The higher average in manufacturing as a whole at the date under review was partly due to the fact that in recent months, holidays have tended to reduce the working time.

In plants producing durable manufactured goods, the hours reported averaged 44.9 in the week ending October 1, as compared with 44.2 in the week ending September 1. Practically all industries within this division reported longer working hours. Reductions in overtime work were generally indicated, so that the increase in the average is largely due to the resumption of more normal conditions following the holiday season; lessened absenteeism on the part of wage-earners may also have been

a factor, while the reduction in the number of employees no doubt also contributed to the higher average, with the release of the less satisfactory workers. In spite of the increase in the average time worked, the aggregate hours reported in the production of heavy manufactured goods showed a decline of 11.7 per cent from the week ending September 1. The strike in the automobile industry was partly responsible for the shrinkage in the total productive hours in this category.

In the light manufactured goods industries, the aggregate hours worked in the week preceding October 1 were higher than in the week of September 1; with considerable increases in the employment of workers in the lower wage brackets. However, the average hourly earnings declined from 60.9 cents at that date, to 60.5 cents at the beginning of October. The aggregate weekly wages paid to hourly-rated employees were then higher by 1.7 per cent than had been the case a month earlier.

Average Hourly Earnings.—The average earnings in manufacturing as a whole at October 1 were lower by 1.4 cents per hour than at the first of September. As already indicated, several factors contributed to this result; the pronounced recessions in employment in the more high-paid heavy manufacturing industries, accompanied by expansion in the light manufactured goods industries (particularly among relatively unskilled seasonal workers) were of especial importance. The continued diminution of overtime work and the loss of working time due to industrial disputes also contributed materially to the falling-off in the latest average hourly rate.

TABLE 2.—AVERAGE HOURS WORKED AND AVERAGE HOURLY AND WEEKLY EARNINGS OF THE WAGE EARNERS IN CANADA FOR WHOM STATISTICS OF MAN-HOURS ARE AVAILABLE AT OCTOBER 1 AND SEPTEMBER 1, 1945, AND NUMBER OF WAGE-EARNERS FOR WHOM MAN-HOURS DATA WERE AVAILABLE AT THE LATEST DATE.

* The industries classed in the durable manufactured industries are indicated by an asterisk.

This was the lowest in the record, dating from November 1, 1944; during this period, variation between the maximum of 70½ cents (indicated at December 1, 1944, and again at May 1, 1945) and the low of 67·8 cents per hour at October 1 has amounted to not quite four per cent; the change is significant, probably being indicative of a trend which will become increasingly pronounced in coming months, with further diminution in overtime work, and continued alterations in the industrial distribution of workers during the "unwinding" process.

Table 2 contains statistics of man-hours, hourly earnings and wage-earners in a con-

siderable list of manufacturing industries throughout the Dominion. Attention should be paid to the sex distribution of the persons employed in the different industries when the variations in the average hours worked and in the average hourly and weekly earnings are being studied. In view of the importance of this matter, an additional column has been entered in Table 2 to show the proportions of women workers reported at October by the firms co-operating in the monthly survey of employment and payrolls; these percentages relate to salaried personnel and to wage-earners employed at other than hourly rates, as well as to hourly-rated workers, who form the most numerous cases.

Sex Distribution of Persons in Recorded Employment at October 1, 1945

AT the beginning of October, the Dominion Bureau of Statistics made its sixth periodical enquiry into the sex distribution of the persons employed by the establishments furnishing monthly statistics of employment and payrolls.¹ The results of this survey are particularly interesting in that they depict the situation existing shortly after the cessation of hostilities. In the period elapsing since the enquiries which were made six months and 12 months previously, there have been significant changes in the total numbers in recorded employment, and in the numbers and the proportions of men and women workers. The seasonal movements from the early spring to the autumn affect the value of comparisons between the most recent data and those of April 1, so that the present report deals more particularly with comparisons between the figures for October 1 of 1945 and those obtained in the October 1, 1944, survey.

A brief review of the situation revealed in the latest returns shows that of the aggregate of 1,793,921 persons on the payrolls of the reporting establishments at the beginning of October, 454,640, or 253 per 1,000 workers, were women; the proportion at October 1, 1944, had been 271 per 1,000, the highest on record. It may be estimated that in the last 12 months, the personnel of these firms has declined by over 145,900 workers, or 7·5 per cent. The reduction among men was

approximately 74,858, or 5·3 per cent of their number, and that among women, 71,055, or 13·5 per cent. Although the latter decrease was larger in relation to the total number of women in recorded employment, it is nevertheless significant that rather more than 51 per cent of the persons released in the nine leading industries were men.

With the termination of the war, the greatest changes as compared with a year ago, have taken place in manufacturing, in which recorded employment has fallen by 15·8 per cent; of the 185,194 workers laid off by the co-operating plants since October 1, 1944, over 110,300 were men, who thus formed 59·6 per cent of the total number released. The existence of an important strike in the automotive industries exaggerated the general reduction in employment, and more particularly, that among men. The 74,886 women who were dismissed from factories in the 12 months represented a loss of 22·5 per cent from their number at October 1, 1944; that among the male workers was 13·1 per cent.

The peak of wartime employment in Canada was reached in the autumn of 1943; a comparison of the latest data with the figures of sex distribution at the beginning of October of that year shows an estimated decrease of 123,200, or 8·4 per cent, in the number of men on the payrolls of the firms now currently furnishing statistics in the nine leading industries; the decline among women in the two years may be estimated at 64,600, or 12·4 per cent. The general shrinkage in activity involved the dismissal of 187,800 persons, of whom 65·6 per cent were men. In manufacturing, the loss of male employees approximates 143,800, or 16·4 per cent, and that of women, 81,300 or 24 per cent. The

¹ It will be recalled that the monthly surveys on these subjects are limited, in the main to establishments ordinarily employing 15 persons and over, in the following major industrial divisions:—manufacturing, logging, mining, communications, transportation, construction and maintenance, services, trade and finance.

Total—Nine Leading Industries.....															

¹ This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries with the exception of electric light and power.

total workers laid off since October 1, 1943, numbered some 225,100; of these, 63.9 per cent were males and 36.1 per cent were females.

These figures clearly indicate that the recession in employment in the last two years,

as in the preceding 12 months, has resulted in the release of greater numbers of men than of women workers. An important factor contributing to this situation is the fact that, with some exception, the cancellation of war contracts has affected most seriously the in-

dustries which largely employ men; as already stated, the strikes in the automotive industries involve male employees to a much greater extent than women workers. For the reason that men ordinarily carry on business on their own account to a greater extent than women, it is probable that, with the termination of war work at relatively high wages, larger proportions of men have returned to their own businesses than is the case among women.

The comparison of the most recent information with that for April 1, 1945, is less significant than the comparisons with the figures for the beginning of October of earlier years, which eliminate the seasonal factor. The survey of six months ago, however, depicted the situation existing shortly before the end of the European war, so that it is interesting to measure the changes which have since taken place. It should be noted that, normally, there is a substantial increase in industrial activity from April 1 to October 1; in many years, the low point of employment is indicated at the former date, and the maximum at the latter. Between April 1 and October 1, 1945, recorded employment for workers of both sexes in the nine leading industries has fallen by some 80,400, or 4.3 per cent; of this aggregate, 45,800 were women and 34,600 were men, the former constituting 57 per cent of the total. In manufacturing as a whole, nearly 128,500 persons have been released in the six months, the loss being 11.5 per cent. The number of women dismissed exceeds 46,500, and that of men, 81,900. Thus the females laid off formed only 36.2 per cent of the total workers released by the co-operating factories. The decline among the women, on the other hand, was greater in relation to their total numbers than was the case among men, the percentage loss in employment for the former being 15.3, and that among male workers, 10.1 per cent.

In the general comparisons given above, adjustment has been made for increases in the coverage of industry during the indicated periods; the adjustments for the various industries and areas are relatively slight, affecting the percentage changes in the different comparisons only by small fractions.

The proportion of 253 women per 1,000 employees in the nine leading industries at October 1, 1945, was the lowest since October 1, 1942, when the first enquiry into sex distribution was undertaken in connection with the monthly surveys of employment and payrolls; the ratios in earlier enquiries were as follows: April 1, 1945, 267; October 1, 1944, 271; April 1, 1944, 270; October 1, 1943, 262, and October 1, 1942, 235. In manufacturing,

in which were reported 56.7 per cent of the total number of women in recorded employment at the date under review, the latest proportion was 260 per 1,000 workers, as compared with 272 six months ago, 283 a year previously, 280 at April 1, 1944, 279 at October 1, 1943, and 257 at October 1, 1942.

The women on the staffs of the co-operating establishments in the nine leading industrial divisions numbered 454,640 at the date under review, when 257,617 or 56.7 per cent were employed by manufacturers, including those in central electric stations; a year earlier, 63.6 per cent of the total women in recorded employment had been engaged in factories, while the proportion at October 1, 1943, had been even higher, at 66 per cent. Considerable numbers and proportions of women were also employed in trade, finance and services; in these, were reported 91,357, 36,963 and 30,201 women, respectively. These three classes together afforded work for 34.9 per cent of the total number of females indicated at October 1, 1945, the remaining 8.4 per cent being distributed among the transportation, construction, communications, mining and logging industries.

As already stated, the number of persons in recorded employment in the nine leading industries has declined by over 145,900 in the last 12 months, while in manufacturing, the reduction approximates 185,200. Thus the important curtailment in the latter group has been accompanied by an advance in the non-manufacturing industries, taken as a unit. The increase therein amounts to some 39,300 workers, of whom 3,800, or less than 10 per cent were women.

The decrease in the number of females engaged in manufacturing affected particularly those employed in the production of durable manufactured goods, in which their ratio of 138 per 1,000 workers was lower than in any earlier survey. In the non-durable manufactured goods division, a very large proportion of the workers laid off had been employed in the manufacture of chemical products for wartime use.

Geographically, a brief review of the situation shows widespread reductions in employment for workers of both sexes in comparison with April 1, 1945, and October 1, 1944. The largest losses among women took place, of course, in the great manufacturing provinces of Quebec and Ontario, in each of which the ratio per 1,000 workers of both sexes was the lowest since 1942. The concentration of women workers in those two areas, however, continued high, 30.3 per cent of the total number in recorded employment at the date

under review being reported in the former, and 45.6 per cent in the latter province. Only in New Brunswick and British Columbia were the proportions of women workers rather higher at the date under review than had been the case in earlier surveys.

In the eight cities with populations exceeding 100,000, were reported 264,653 women workers at October 1, 1945; this was 58.2 per cent of the Dominion total, a proportion which was smaller than that of 59.3 per cent indicated six months previously, being also below the October 1, 1944, ratio. The concentration of men in recorded employment in the leading centres was likewise less pro-

nounced than at April 1, when 41 per cent of such workers had worked in the larger metropolitan areas, as compared with 39.2 per cent at the date under review. At October 1, 1944, firms in the eight leading cities had reported 41 per cent of the total number of men, and 59 per cent of the women.

In the last 12 months, recorded employment in the larger centres has fallen by 8.8 per cent in the case of the men, and by 13.9 per cent in the case of the women on the staffs of the co-operating establishments. These reductions exceed those of 5.3 per cent among men and 13.5 per cent among women throughout the Dominion in the same period.

Report on Employment Conditions, December, 1945

The following report covering the employment situation for the past month has been prepared by the Research and Statistics Branch, Department of Labour, in co-operation with the Employment Service, Unemployment Insurance Commission. The first section of the report deals with the Canadian labour market by industry groups, while the second section gives a more detailed analysis of employment conditions by regions.

DURING December, the supply of labour available to Canadian industries continued to increase, while, at the same time, the demand for workers maintained a steadily downward trend. At December 20, the number of applicants reported as unplaced by local employment offices exceeded the number of vacancies by more than 100,000. The decline in labour requirements is due not only to the seasonal slackening in demand, but to the fact that many vacancies have been filled by ex-servicemen and former war workers. When reconversion and present development projects are completed, however, and when weather and supply of materials warrant employment expansion, additional workers will be required in increasing numbers. Labour requirements of Canadian industries (excluding agriculture) as measured by the number of unfilled vacancies¹, totalled 79,780 (53,585 male and 26,195 female) at December 20, as compared with 103,687 at November 22, four weeks earlier. The number of unfilled vacancies is considerably less than at December 21, 1944, the corresponding reporting date last year, when manpower requirements totalled 126,533. Although the decline in demand in the four weeks prior to Decem-

ber 20 was common to all industry groups, the labour needs of the logging and service industries continue at a high level. All regions report a considerable slackening in manpower requirements, with the Ontario and Quebec Regions accounting for two-thirds of the decline. Demand for male labour decreased by 21,234 during the month, while the number of vacancies for female workers declined by 2,673. Table I shows unfilled vacancies by main industry group and by sex, as at December 20, with absolute and percentage changes in total demand during the past month.

The number of unplaced applicants² continued to rise during the month and at December 21 totalled 185,274 (150,583 male and 34,691 female); this represents an increase of 13,206 since November 23, four weeks earlier. While there was a rise in the total supply of workers, however, the number of unplaced female applicants decreased by more than 3,000 in the period under review. Many applicants have been employed on a temporary basis by industries with increased activity at the holiday season. Table II shows labour demand and supply by occupational groups and by sex, as at December 21, 1945.

Logging

The activities of most logging companies have been curtailed for the holiday season and operations will not be resumed until mid-January or later. There is still an urgent demand for experienced woodsmen, and expansion in this industry will be governed

¹ Unfilled Vacancies are the number of unfilled jobs on file in employment offices as at the date indicated.

² Unplaced Applicants are the number of Unreferred Applicants plus Unconfirmed Referrals. Unreferred Applicants are those who have not been referred to specific jobs as at the date indicated. Unconfirmed Referrals are applicants who have been referred but whose placement has not been confirmed.

by the number of skilled loggers available. The intensive recruiting campaign carried on this year has met with a satisfactory response, and many off-season agricultural workers, former war plant employees and ex-servicemen have accepted this type of

employment. Labour requirements of the logging industry totalled 22,901 at December 20 as compared with 30,754, four weeks earlier. The Quebec Region, alone, reported a demand for 13,713 additional workers for pulpwood logging.

TABLE I—UNFILLED VACANCIES BY INDUSTRY AND BY SEX AS AT DECEMBER 20, 1945

(excluding Agriculture)

Industry	Male	Female	Total	Change from November 22, 1945

Mining

Manpower requirements in the mining industry decreased by 25 per cent during the four weeks under review to total 3,266 at December 20. Almost two-thirds of this demand was for the coal and gold mining industries. While some mines are fully staffed for present operations, others are still placing orders for workers, particularly experienced miners. Additional workers, moreover, will be required in the spring when present mine development and new projects are ready for full-scale production. The placement of suitable applicants in areas where there is presently a demand is hampered by the lack of housing accommodation. Although mines, generally, have a full quota of inexperienced workers, others could be absorbed if more skilled miners were available. The shortage of certificated coal miners in both the Prairie and Maritime Regions still continues.

Manufacturing

During December, demand for workers in the manufacturing industries continued to decline. Labour requirements at December 20 totalled 22,290 as compared with 27,835, four weeks earlier. Many vacancies in these industries have been filled by ex-service personnel and former war plant workers. There is, moreover, a seasonal slackening in the labour requirements of some of these industries, and employment expansion in others is limited by the shortage of raw materials.

Textiles and Products—Almost 40 per cent of the overall labour demand in the manufacturing group was for the textile and products industry. While the labour situation in this industry has improved considerably during the past few months, there are still vacancies for both skilled and unskilled workers. Demand for labour at December 20 totalled 8,566, which represents a slight decline since November 22. Firms manufacturing men's and boys' clothing and women's and misses' outerwear accounted for more than half the requirements at the December date.

Wood Products—The labour needs of the wood products industry dropped sharply during the month. At December 20, there were 2,141 additional workers required, which represents a decline of 1,138 since November 22. The seasonal slackening in the manpower requirements of sawmills accounted for more than half this decline; demand decreased from 1,890 at November 22 to 1,225 at December 20. Experienced workers, however, are still required for the manufacture of furniture and finished lumber products.

Food Processing—A decline of 1,016 brought the labour requirements of the food processing industry to 1,762 at December 20. With the canning and preserving season over and meat packing plants supplied with sufficient labour to handle the present live-stock run, considerable slackening is evident in the manpower needs of this industry group.

Construction

The demand for workers in the construction industry showed a sharp decline during the month to total 4,723 at December 20 as compared with 8,357 at November 22. Present labour requirements are almost entirely for residential and industrial construction projects. There is still a demand for skilled tradesmen but few of the available applicants have had the necessary experience. The shortage of materials, moreover, together with unfavourable weather conditions, is presently retarding construction work. When the extensive construction program gets underway in the spring, however, both skilled and unskilled workers will be required in large numbers.

Transportation

Manpower requirements of the transportation industry decreased by almost 50 per cent during the month to total 2,073 at December 20. The reinstatement of ex-servicemen has substantially alleviated the labour shortage in this industry. While railways, generally, have been supplied with sufficient labour, there is still some demand for section hands and extra gang labourers in outlying districts. Labour requirements of steam railways dropped from 1,884 at November 22 to 917 at December 20. A marked decline is also evident in the manpower needs of highway and water transportation companies.

Trade, Finance and Service

Trade, finance and service industries, understaffed during the war years, are benefiting by the present easier labour market. Labour requirements in this group totalled 23,666 at December 20 as compared with 27,680, four weeks earlier. The number of vacancies in wholesale and retail establishments decreased by 3,416 to total 6,629 at December 20; employers' orders for additional workers to handle the Christmas trade have been filled with no difficulty. There is some demand for salesmen for insurance and real estate firms, but available applicants, particularly ex-servicemen, are reluctant to accept this type of employment. The shortage of skilled

garage workers, on the other hand, has been substantially alleviated by ex-service personnel. While there are still vacancies for chamber maids and kitchen workers, hospitals, and other institutions, on the whole, are more adequately staffed; at December 20 vacancies in hospitals totalled 1,193. The labour situation in hotels and restaurants has also improved considerably with a better type of worker accepting this kind of employment.

Demand for domestic help, on the other hand, rose slightly during the month, to total 3,730 at December 20. Many housekeepers are again placing orders for workers but few applicants are willing to accept this type of employment. The Home Aide project, in Toronto, has been fairly successful in the training and subsequent placement of applicants for this kind of work, and other centres are presently considering similar projects.

Regional Analysis

The Regional analysis which follows is based on semi-monthly reports received from Local Employment Offices across Canada. The report covers employment conditions during the month ended December 22, 1945.

Maritime Region

Woods Operations.—Favourable weather conditions prevail in most sections. The general labour supply is greater than at this time a year ago, and it is expected that after woods-workers return from the annual Christmas holidays the logging camps will swing into full-scale operations.

Already 200 temporary permits have been issued by the Charlottetown office to farmers wishing to enter woods operations. Only experienced choppers and loaders are needed in the Halifax area. Loggers from Prince Edward Island and the Annapolis Valley have met the requirements of one large operator at Liverpool, who has placed standing orders for 50 choppers to offset labour turnover.

Labour turnover is a problem in the Bathurst area also, and 200 men are still needed in local camps. Orders placed in the St. Stephen office are being filled with difficulty, and at Campbellton more men could be readily absorbed.

Coal Mining.—A slight improvement in the labour situation, with consequent increase in production, has been evident during the last few weeks. As many more workers—ex-servicemen for the most part—are accepting work at the coal face in the Sydney area, it is expected that the 400 outstanding vacancies will be filled during the winter. Only reinstatements are being made in the Springhill collieries. Mines in the New Glasgow area are all operating full time, but one colliery will close at the end of the year, releasing about 120 men.

Manufacturing.—Lay-offs are still in progress in several Maritime cities. A sharp curtailment of shipbuilding activities at Halifax has resulted in the release of about 200 workers, most of whom are employed temporarily on a part-time basis. The Lunenburg Foundry has

completed the lay-off of 120 employees and is reconverting the plant to civilian production. Although winterization of ships has been finished in Liverpool, about one-third of the men engaged on that work have been retained on a temporary basis for ship repair jobs.

The dehydration plant at Edmundston laid off 140 of its staff and the local pulp mill also released its men for the winter. Berwick Fruit products has released 40 women and closed its female staff house. Although the Kentville dehydration plant closed November 24, releasing nearly 250 workers, few of the women involved have applied either for unemployment insurance benefits or other employment. Several other food processing plants in the Maritimes are planning to re-open soon, giving employment to some hundreds of their former staffs. The Halifax fish processing establishments are asking only for experienced fish filleters and cutters, and Bridgewater plants are well supplied with labour.

Lack of housing accommodation still hinders the hiring of textile workers in St. Stephen and Windsor. At Truro, however, clearance orders are bringing results, but winders and hand weavers are still needed at the local woollen mills. In Amherst, a firm manufacturing men's and boys' trousers has resumed operations and now has 115 employees.

Construction.—Many large building projects which would absorb building labour have been postponed owing to the shortage of materials. In some instances contractors are laying off their men pending receipt of necessary supplies. Residential construction also has been delayed by lack of lumber, hardware, and plumbing materials.

Wartime Housing and Veterans' Land Act programmes are making good progress, but hospital construction is seriously hampered by the shortage of skilled bricklayers, plasterers, and experienced finishing carpenters. Many building tradesmen are taking holidays at present but it is expected that more labour will be available early in 1946.

Ex-Servicemen.—Many veterans are registering with National Employment Service

offices, but placements in suitable employment are becoming more difficult and a marked increase in the number of applications for out-of-work benefits is reported.

Quebec Region

Woods Operations—On the whole, operators are satisfied with the current supply of logging labour and are looking forward to a profitable season when woodsmen return from the annual Christmas holiday. Cutting conditions are ideal, but the lack of snow for hauling is causing some concern to many jobbers and sub-jobbers working under yearly contracts.

The Montreal office reports slow but steady recruitment of bushmen, averaging 150 loggers weekly. Very few experienced woodworkers are available, however. The Port Alfred office has filled all of its 675 orders for bushmen, with the exception of a deferred order for 200 men to be supplied in January. At La Tuque, too, the situation is fairly satisfactory, but more than 1,000 loggers could still be absorbed throughout the district. About 350 men have reported for woodwork in Montmagny camps during the last month.

Companies in the Rimouski area have doubled their demands, in anticipation of the holiday exodus from the bush. There are still between 900 and 1,000 vacancies in the Matane district.

Hard Rock Mining—The labour situation remains unchanged, and progress in the building up of mining staffs is hindered by lack of housing accommodation. Experienced miners are still scarce at Rouyn, and both base metal and gold mines are accepting inexperienced applicants.

Production at the asbestos mines has been affected by strikes in Manville, N.J., and Waukegan, Ill., two of the American plants manufacturing asbestos products.

Manufacturing—Mass lay-offs, both seasonal and permanent, are still in progress in various industrial centres. The shipyards continue to reduce their staffs. The Quebec Arsenal, too, has released 100 men, as well as 75 employees from the Inspection Board at Valcartier. The lay-off of about 200 workers from the Davie Shipbuilding company's yards at Levis has also increased local unemployment. Three hundred men were released from the Aluminum Company of Canada's plant at Shawinigan Falls, but 50 others were hired on a temporary pot-repair job.

Seasonal lay-offs are occurring in Hull, where the Canadian International Paper Company has released 150 workers and the E. B. Eddy Company, 60. The Ford strike in Windsor has made it necessary for the Hull Iron and Steel Foundries to lay off 130 employees. The Inter-

national Paper Company has released 90 seasonal workers from its Three Rivers wood-yard, and Electric Steels Limited, of the same city, has laid off the balance of its staff, about 50 in all.

All factories engaged in the production of glass, building materials, household utensils, electrical fixtures and hardware are very active. Shortage of materials alone prevents immediate staff expansion. Upholsterers are needed in all furniture plants, and printing tradesmen are in constant demand. Moulders are in short supply throughout the steel industry.

The textile trade and kindred industries continue to absorb all workers who can be obtained and housed. In the Drummondville area applicants under 25 years of age are easily placed. Employees on strike at the three Dominion Textiles plants in the Montreal area returned to work after being idle for eight days. Shoe and leather factories are very short of skilled workers and find it particularly difficult to obtain apprentices. Rubber goods manufacturers at Granby and Beauharnois also need women workers, who cannot be found locally.

Construction—Activity has lessened considerably during the last month, and owing to poor weather conditions and shortage of materials many projects in rural areas have been suspended until spring. Carpenters are becoming available in the Montreal area in numbers almost sufficient to fill current orders. The supply of plumbers is also adequate, and there is a surplus of painters and electricians.

Ex-Servicemen—The number of "white collar" veterans without employment has decreased, largely due to temporary hiring for the holiday rush by post offices, department stores and other establishments. Reinstatement figures show a steady increase and most discharges are taking advantage of their privileges without much delay. Applications for settlement on farms under the Veterans' Land Act have increased slightly, but fewer ex-servicemen are seeking vocational training.

Ontario Region

Woods Operations—Approximately 12,000 bushmen were placed in Ontario logging camps during the autumn, but there is still a heavy demand for experienced workers. There are 1,900 outstanding orders in the Toronto office for qualified men. Few men are available to fill 600 vacancies at Pembroke, and another 200 loggers are needed at Arnprior.

In Northern Ontario activity and production are greater than at any time during the last six years. About 200 general bushworkers are still required at Kirkland Lake, and experi-

enced men of all kinds can be placed at Sault Ste. Marie.

Hard Rock Mining—Prevailing strike conditions have affected the production of the base metal mines, and the nickel companies at Sudbury have cancelled all orders for underground and surface labour.

The easier labour market has resulted in increased gold production since October. At present, 13,500 men are engaged in the industry, as compared with the employment low of 9,900 in June, 1945. About 3,200 miners were placed in Northern Ontario operations from September 20 to December 6, but lack of development work and housing accommodation are hampering further hiring for the time being. Although few more men can be engaged at Timmins before spring, ex-servicemen of the district can still be placed if capable of underground work.

Manufacturing—Plans are on foot for the reorganization of various industrial plants throughout the region to full-scale civilian production and increased activity is expected in the coming months. One encouraging development during the last month was the ending of the 99-day strike of Ford Motor Company employees at Windsor, which will react favourably on other industries affected by the dispute. All factory supervisors and employees of the steam laboratory and plant production departments have been recalled to work and workers at several other plants hope to return to their jobs shortly. Reconversion activities have resulted in the temporary lay-off of about 800 Chrysler Corporation employees and there is a surplus of skilled workmen, welders especially, in the Windsor area.

In several other industrial centres lay-offs are still going on. The completion of the seasonal operations of the sugar companies has brought about the release of many workers at Chatham and shortage of materials forced the Hobbs Glass Company of London to lay off its staff of 70 for two weeks. The shut-down of the Central Aircraft plant resulted in the release of 60 employees, most of whom were maintenance men, stock-keepers and packers. The General Motors strike in the United States is having an adverse effect on the employment situation in the St. Catharines district, which suffered little from the Windsor dispute. The threatened American steel strike would still further handicap St. Catharines iron and steel manufacturers, who are spreading out production as much as possible in order to provide employment.

Plants engaged in the manufacture of iron and steel and their by-products still have the heaviest demand for workers. Moulders and core-makers can be easily placed at Brantford,

where agricultural implement factories are also calling urgently for expert pattern makers. There are few suitable applicants to meet the pressing needs of Hamilton foundries for skilled tradesmen. Many of the men released from one Ingersoll plant are back at work, and the steel company at Sault Ste. Marie has re-hired several hundred men since lay-offs began last September. The London car shops recently placed an order for 100 fully qualified tradesmen and mechanics of various types and the London office reports that the employment of youths in local foundries has materially stepped up production. The establishment of new industries promises added employment in several Ontario cities in 1946.

Construction—Except for a few small lay-offs, there has been little change in the general employment picture throughout the region. The demand for skilled building tradesmen has dropped off slightly, but there is still a shortage of bricklayers, electricians, plumbers, roofers, and tile-setters. The greatest need is for bricklayers, almost 450 being needed, and there are also orders for 382 trim carpenters. The call for cement finishers has lessened, and the demand for labourers is very light.

Ex-Servicemen—There has been little change in the employment situation, but discharges from the three services for December indicate a 50 per cent reduction from the peak figure of 32,000 in October. It is hoped that this factor, together with reconversion activities in 1946, will gradually reduce the number of unplaced applicants. Many veterans have been provided with temporary work for the Christmas season in post offices, railways, and retail stores. During the period from October 15 to November 14, 167 handicapped ex-servicemen were placed in suitable employment.

Prairie Region

Woods Operations—Activity in the logging camps has lessened temporarily and full-scale operations will not be resumed until after the annual holiday season, when it is expected that many Great Lakes seamen, as well as workers from the grain elevators, freight sheds, and docks of the Twin Cities, will go to the bush for the winter months. Although several companies in the Lakehead area have discontinued their offer of transportation for bushworkers, it is estimated that about 600 pulpcutters are still needed to meet present requirements. About 450 men are required to satisfy demands of contractors in the Fort Frances district. The labour shortage in the Kenora area has been relieved by local applicants and many western

farmers who have taken seasonal jobs in the bush. There are still about 700 prisoners of war in Kenora logging camps, whom employers will release as soon as other labour is available.

The Edmonton office reports that since December 6, a total of 250 bushworkers have been placed in local camps or transferred to British Columbia. Many men, however, will not go to the bush until after the Christmas season, and cutting is further hampered by the deep snow.

Coal Mining—While general production has increased, the shortage of certificated miners persists, and unskilled labour cannot be engaged until these requirements are met. The Moose Jaw, Lethbridge and Red Deer offices report a continued demand for qualified miners, and Edson operators are also asking for unskilled surface and underground workers. Lack of housing accommodation makes it difficult to answer the urgent call of Drumheller mine owners for skilled workmen of all types. Since the lifting of the "freeze" about 575 men have been placed in the Edmonton area, with resultant increase in production.

Hard Rock Mining—The Winnipeg office reports that most of the clearance orders for mine workers call for qualified miners and machine runners to balance the heavy quota of untrained men already on their payrolls, and workers with a few months' experience can be placed immediately. Orders in the Kenora area are confined to experienced underground workers and surface labour is needed only by smaller development operations. The steady flow of ex-servicemen seeking reinstatement is meeting all requirements at Flin Flon for the time being.

Manufacturing—The reduction of the livestock run at most Prairie centres has led to lay-offs from the packing plants. Flour mills are well manned and in some cases farmers are being released to make way for veterans. Weather conditions are good for the annual ice harvesting and no difficulty is foreseen in meeting calls for labourers for this seasonal work. There is, however, a shortage of experienced tongmen at Edmonton.

Reinstatements are still meeting all the labour requirements of the Port Arthur pulp and paper mills. The local shipyards are continuing the lay-off of their employees.

General factory workers are still needed at Winnipeg and in Saskatoon there is a persistent call for skilled workmen, especially in the sash and door factories. Winnipeg cloak manufacturers are recalling employees temporarily laid off some time ago, and several factories are now ready for full-scale production. Although these companies are willing to train beginners, they have raised the standard for applicants

and are reluctant to accept persons unlikely to remain permanently.

Construction—Adverse weather conditions, together with the current shortage of building materials, is seriously retarding construction in some parts of the region. As a result of the scarcity of supplies, numerous lay-offs have occurred in the Port Arthur area, where there is no employment open to welders, electricians, millwrights, machinists or truck drivers. Men from Port Arthur and Winnipeg are filling orders for finishing carpenters and labourers to work on the new pulp and paper mill at Marathon.

The shutdown of the City of Winnipeg Hydro-Electric Commission's Slave Falls extension project, to reopen at the end of March, has resulted in the release of bricklayers, carpenters and labourers. In Regina, the number of men working on Wartime Housing projects has been reduced from 150 to 20.

Ex-Servicemen—Local offices report that the percentage of placements is somewhat higher for the latter half of the month, in spite of the fact that most of the vacancies listed necessitate the acceptance of work away from home. Some applicants have obtained temporary employment for the holiday season. Throughout the region there has been little difficulty in placing discharged servicewomen.

Pacific Region

Woods Operations—Logging camps on the Pacific Coast and in the interior have closed for the Christmas holidays. While some camps will re-open about January 15, a number of the larger ones will not begin operations until March 1. Present indications are that expansion will be governed by the supply of skilled woodsmen available.

During the early part of the month weather conditions hampered operations in some localities, particularly in the Courtenay and Fernie areas. At the present time there are sufficient local applicants to fill extensive orders, which are expected to increase after the holiday season.

Sawmills—Most of the mills in the Coast area shut down for the holidays and the semi-annual overhauling. Some plants will re-open immediately after the new year, while others will remain closed indefinitely. The length of the shutdown will be affected by the shortage of logs, resulting partly from the non-delivery of log booms from up the coast, due to bad towing weather.

New Westminster, the largest sawmilling centre, reports that while some local mills could absorb more workers immediately, companies are awaiting the return of servicemen

to see how many will take advantage of their reinstatement privileges. Any current labour turnover can be handled locally and there is no call for outside labour. At least three of the saw and shingle mills in the district have closed for holidays and repairs.

Sawmills on Vancouver Island which have closed for holidays and plant overhauling are expected to be operating again full-time by February 1. Many men from the logging camps are being used in operations in Duncan, and the supply of labour appears sufficient to meet requirements.

Coal Mining—The demand for experienced miners has not yet been satisfied but some progress is being made. Companies are accepting inexperienced workers; this has entailed much additional work as these men have to be supervised and trained before they can be employed as underground workers.

The shrinkage of the working face of all underground operations has only recently begun to offset efforts to supply the collieries with normal crews. Henceforth, the rate of referrals to the mines will be governed by the speed with which underground deterioration of old workings can be overcome. This condition is attributable to the lack of sufficient manpower through the war years, and operators now are endeavoring to bring development up to date.

Hard Rock Mining—In the base metal and gold mining fields, as in the collieries, the shrinkage of working faces necessitates extensive development work. The urgent demand for skilled miners and timbermen remains unsatisfied; this type of labour is not available and a shortened training period or apprenticeship may have to be instituted in order to break this bottleneck.

The recent rise in the price of silver has aroused a dormant industry. The reopening of silver properties in British Columbia will mean the absorption of some unemployed mine workers in the near future.

Manufacturing—Vancouver shipyards are still reducing their staffs and, if no new contracts are placed, it is likely that many more workers will be released when orders on hand

have been completed. Work at the Prince Rupert yard is steadily declining, with a consequent gradual reduction of staff over the last six weeks.

Of the 100 workers taken on temporarily at the Yarrows Yard in Victoria recently, 60 were ex-servicemen. While the work is not permanent, recent statements of the company hold out hope that further repair and overhaul jobs will materialize shortly. Some ex-servicemen are also being placed in the R.C.N. Dockyard. The Victoria office reports numerous enquiries from ex-employees of local shipyards anxious to return to their former homes in other parts of Canada. Such a movement would definitely ease the local employment and housing situation.

Canneries in the Penticton and Westminster areas have finished operations for this season and large lay-offs from fruit packing plants have been completed.

Although the total of unreferred applicants in the New Westminster district has increased noticeably, the situation does not as yet present any great difficulty. Some firms in this area have changed over from wartime to peacetime production, and many are employing more skilled workers than before the war, especially those engaged in the manufacture of building materials and supplies.

Construction—Although much new construction is planned in British Columbia, lack of supplies (chiefly finishing materials) is retarding the employment of more men at present. The few labour shortages are confined to highly skilled finishing carpenters, bricklayers, and similar tradesmen.

A fair demand for highway labour is developing and should weather conditions continue favourable, a number of workers will be needed, particularly for work on the Hope-Princeton highway.

Ex-Servicemen—The increase in general unemployment in the province makes it more difficult to place returning servicemen. Postal authorities throughout the region hired veterans for the Christmas rush and, although this work was only of short duration, it helped many over the holiday season.

Applications for Employment; Vacancies and Placements; November, 1945

REPORTS received from the National Employment Service "Offices of the Unemployment Insurance Commission during the four-week period November 2 to November 29, 1945, showed a decrease of 6.9 per cent in business transacted when compared with the preceding five weeks, September 28 to November 1, 1945, and a loss of 27.5 per cent

in comparison with the four-week period November 3 to November 30, 1944, this computation being based on the average number of placements recorded daily. Under the first comparison, forestry and logging and trade showed moderate gains and mining and finance insurance slight increases but all other industrial divisions recorded declines, the most

pronounced being in manufacturing and construction. When compared with the four weeks ending November 30, 1944, a fairly substantial gain was recorded in construction and minor increases in mining, agriculture and fishing, hunting and trapping but the other industrial groups showed losses, the most pronounced being in manufacturing, forestry and logging, trade and services.

The accompanying chart shows the trend of employment since January, 1942, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered at Employment Service Offices throughout Canada. It will be seen

The average number of vacancies reported daily by employers to the offices of the Commission throughout Canada during the period under review was 6,897 compared with 8,189 during the preceding five-week period and 8,547 in the period November 3 to November 30, 1944. The average number of applications for employment received daily by the offices during the four weeks ending November 29, 1945, was 10,083 in comparison with 9,754 in the previous five weeks and 9,554 in the four weeks ending November 30, a year ago. The average number of placements made daily by the offices during the four weeks November 2 to November 29, 1945, was 4,725 of which

from the graph that the trends of the curves of vacancies and placements in relation to applications took downward courses, the ratio of vacancies to each one hundred applications being 68.4 during the four weeks ending November 29, 1945, in contrast with 83.9 during the preceding five weeks and 89.4 during the four weeks November 3 to November 30, 1944. The ratio of placements to each one hundred applications was 46.8 as compared with 52.0 in the previous period and 68.2 in the four-week period ending November 30, a year ago.

4,548 were in regular employment and 177 in work of one week's duration or less, as compared with a total daily average of 5,076 during the previous five weeks. Placements in the four weeks ending November 30, 1944, averaged 6,518 daily, consisting of 6,376 placements in regular and 142 in casual employment.

During the period November 2 to November 29, 1945, the offices of the Commission referred 148,667 persons to vacancies and effected a total of 113,390 placements. Of these the placements in regular employment were 109,155 of which 90,513 were of males and 18,642 of

females, while casual placements totalled 4,235. The number of vacancies reported by employers was 124,966 for males and 40,570 for females, a total of 165,536, and applications for work totalled 241,984, of which 192,574 were from males and 49,410 from females. Reports for the five weeks September 28 to November 1, 1945, showed 237,505 positions available, 282,877 applications made and 147,197 placements effected, while from November 3 to November 30, 1944, there were recorded 205,131 vacancies, 229,290 applications made and 156,438 placements in regular and casual employment.

The following table gives the placements effected by employment offices, each year, from January, 1935, to date:—

Year	PLACEMENTS		
	Regular	Casual	Totals
1935.....	226,345	127,457	353,802
1936.....	217,931	113,519	331,450
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295
1939.....	242,962	141,920	384,882
1940.....	320,090	155,016	475,106
1941.....	316,168	191,595	507,763
1942.....	809,983	85,638	895,621
1943.....	1,890,408	53,618	1,944,026
1944.....	1,693,119	46,798	1,739,917
1945 (48 weeks).....	1,378,962	44,072	1,423,034

Nova Scotia and Prince Edward Island

During the four weeks ending November 29, 1945, the daily average of positions offered through National Employment Service Offices in Nova Scotia and Prince Edward Island was 267, compared with 311 in the previous period and 289 during the four weeks November 3 to November 30, 1944. The average number of placements effected daily was 192 in comparison with 213 in the preceding five weeks, and 219 during the period terminating November 30, a year ago. A fairly large decrease in manufacturing, and a moderate decline in trade accounted for the reduction in the daily average of placements from the corresponding period a year ago. A moderate improvement was noted in construction and a somewhat smaller advance in logging, while the changes in the remaining groups were small. Placements by industrial divisions numbered: manufacturing 1,261; services 967; construction 847; trade 755; public utilities operation 319; forestry and logging 243 and mining 138. There were 3,428 men and 964 women placed in regular employment.

New Brunswick

Employment opportunities as indicated by orders received at Employment Offices in New Brunswick during the period under

review, called for a daily average of 242 workers compared with 317 in the previous five weeks and 251 in the corresponding period a year ago. The average number of placements effected daily was 148 the same as in the previous period and 211 in the four weeks ending November 30, 1944. A fairly large decrease in forestry and logging together with moderate losses in manufacturing and trade were responsible for the decline in placements from the four weeks ending November 30, a year ago. A slight increase was noted in public utilities operation and mining while changes in all other groups were small. Placements by industries included: manufacturing 710; services 633; trade 593; public utilities operation 551; construction 549; forestry and logging 368 and mining 117. Regular placements numbered 2,859 of men and 609 of women.

Quebec

Positions offered through Employment Offices in the Province of Quebec during the four weeks terminating November 29, 1945, averaged 1,787 daily compared with 2,150 in the preceding five weeks and 2,691 during the corresponding period a year ago. Placements showed a daily average of 896 in comparison with 990 in the previous period, and 1,016 during the four weeks ending November 30, 1944. A marked decrease in logging and manufacturing supplemented by substantial losses in services and trade, and a moderate decline in public utilities operation and finance and insurance were responsible for the reduction in placements from the same period a year ago. Moderate gains were reported in mining and construction. Industrial divisions in which most of the placements were effected were: forestry and logging 5,917; manufacturing 5,713; construction 3,851; services 2,253; trade 1,503; public utilities operation 1,095 and mining 972. There were 18,407 men and 3,016 women placed in regular employment.

Ontario

There was a decrease in the average number of positions available daily at Employment Offices in Ontario during the period ending November 29, there being 2,900 in comparison with 3,499 in the previous period and 3,468 during the four weeks terminating November 30, 1944. Placements decreased under both comparisons, the daily average being 2,107 during the period under review in contrast with 2,322 in the preceding five weeks and 2,551 during November, 1944. The reduction in placements from the corresponding period a year ago was chiefly attributable to a marked decrease in manufacturing, substan-

tial declines in trade and logging and a moderate loss in services. These reductions were somewhat modified by a substantial increase in construction and small improvements in all other groups. Placements by industrial divisions included: manufacturing 19,333; services 8,525; construction 6,729; trade 6,058; public utilities operation 3,998; logging 3,753; mining 1,092 and finance and insurance 858. Placements in regular employment numbered 41,283 of men and 8,096 of women.

Manitoba

Orders listed at Employment Offices in Manitoba during the period terminating November 29, 1945, called for a daily average of 360 workers compared with 364 in the previous five weeks, and 406 during November a year ago. The average number of placements effected daily was 282 in comparison with 263 in the preceding period and 335 in the four weeks ending November 30, 1944. Except for a moderate gain in construction and slight advances in logging, agriculture and fishing, all industrial groups showed reductions in the daily average of placements when compared with the corresponding period a year ago, the largest decrease being losses in manufacturing, trade and services. Industrial divisions in which most of the placements were effected were: manufacturing 1,896; trade 1,551; services 1,479; construction 736; public utilities operation 649; logging 170 and mining 125. There were 3,929 men and 1,746 women placed in regular employment.

Saskatchewan

Opportunities for employment in Saskatchewan during the period under review numbered 195 daily compared with 214 in the previous five weeks and 217 during the four weeks terminating November 30, 1944. The average number of placements effected daily was 150 in comparison with 162 in the preceding period and 190 during the corresponding four weeks a year ago. Reduction in placements from the period terminating November 30, 1944, were noted in trade, services and manufacturing and a gain in construction, all of which were moderate in volume. Other changes were of minor importance only. Placements by industrial divisions numbered: services 967; trade 796; manufacturing 674;

construction 375; public utilities operation 373; logging 157 and agriculture 151. Regular placements numbered 2,465 of men and 797 of women.

Alberta

The demand for workers on a daily average as indicated by orders listed at Employment Offices in Alberta during the four weeks ending November 29, 1945, was 356 in contrast with 416 in the five weeks terminating November 1, and 420 during November a year ago. There was a daily average of 308 placements in comparison with 286 in the preceding period and 341 during the four weeks ending November 30, 1944. When comparing placements, by industrial divisions, with November, a year ago, moderate declines were noted in trade, manufacturing, and services but these were offset in part by somewhat smaller increases in agriculture, logging and construction. There were nominal changes only in all other groups. Placements by industrial groups included: manufacturing 1,602; services 1,544; logging 937; trade 873; construction 710; mining 688; public utilities operation 658 and agriculture 294. There were 5,634 men and 1,202 women placed in regular employment.

British Columbia

Orders received at Employment Offices in the Province of British Columbia during the four weeks ending November 29, 1945, called for a daily average of 790 workers in contrast with 919 in the previous five weeks and 805 during the corresponding period a year ago. The average number of placements effected daily was 642 in the period under review, in contrast with 687 during the five weeks ending November 1, and 655 during November, 1944. A substantial decline in manufacturing and moderate losses in services and trade were responsible for the decline in placements from the period ending November 30, a year ago. These were offset in part by a fairly large increase in construction and moderate gains in logging, mining, and public utilities operation, while advances in all other groups were small. Industrial divisions in which most of the placements were effected were: manufacturing 3,529; services 2,632; logging 2,483; trade 2,009; construction 1,984; public utilities operation 1,765 and mining 744. Regular placements numbered 12,508 of men and 2,212 of women.

Labour Law

Legal Decisions Affecting Labour

Damages Awarded in British Columbia for Wrongful Expulsion from Union

DISPUTES within a local of the Boilermakers' and Iron Shipbuilders' Union of Canada have come before the British Columbia Courts on several occasions in the last year or two. On November 4, 1944, the British Columbia Supreme Court awarded damages of \$1,000 to a former member of Local I of the union who had been expelled illegally from the union and who had not sought employment as a non-union man pending his action for reinstatement.

The action was, in the first place, one for an injunction restraining the union from acting on the expulsion and for damages. As the defendant's counsel admitted that the plaintiff's expulsion was illegal under the rules of the union and that he was entitled to a restraining order, the Court so found and the case resolved itself into a question of assessment of damages only.

[It might be interpolated here that in England a member or former member of a voluntary association may not be entitled to damages from the association even where the expulsion was wrongful. The question appears to turn on whether the member was expelled by a committee of the association or by the association itself (1915) *Kelly v. National Society of Operative Printers*, 317 L.T.R. 632, 633, 113 L.T. 1055.]

The plaintiff was a welder employed since 1942 by a company under an agreement with the union whereby only members of the union could be employed unless the union was unable to supply the necessary labour. When the company was notified by the union that the plaintiff had been "suspended" from membership, it dismissed him. The plaintiff reported to National Selective Service but did not secure a separation card from the company entitling him to seek other employment, and did not look for a job. He instituted proceedings against the union on February 26 but on June 21, while the action was still pending, he was reinstated by the union.

In the opinion of the Court, the sole question was "the question of damages that the plaintiff was entitled to recover as a result

of the wrongful act of the defendant union." As the plaintiff had been earning \$100 a month after payment of income tax, and was out of employment from December 3, 1943, until June 21, 1944, general damages were fixed at \$1,000.

Counsel for defendant argued that as the plaintiff had not taken steps to obtain employment and thereby mitigate the damages, he was entitled only to nominal damages. The plaintiff's reply was that as a union man, wrongfully expelled from his union, he should not be expected to take a non-union job pending his reinstatement or the termination of the action. No cases on this point were cited by either counsel and the Court concluded that it was unreasonable to expect the plaintiff to seek employment as a non-union man. The Court continued:

I pointed out during the trial that Unions, and particularly those Unions operating under a closed shop agreement had a great responsibility to their members, as the depriving of a Union member of his membership in a Union might be really depriving him of his means of livelihood...

I think with good reason that he might have been seriously prejudiced had he not stood upon his rights to be reinstated as a member of the Union, and refuse during such period to seek employment as a non-Union man.

I was satisfied on considering the whole evidence that the plaintiff had just reason to fear future serious repercussions if he so acted. I am impressed with the words of Younger L.J. in the case of *Braithwaite v. Amalgamated Soc. of Carpenters* (1921), 91 L.J. Ch. 55 at p. 68: "The preliminary contention which each of the two trade unions concerned in these actions here put forward—namely, that the union is entitled to have withdrawn altogether from the cognizance and jurisdiction of any Court of justice the determination of the question whether there is any warrant at all under its rules for the expulsion of the plaintiff members from its ranks—is one so wide reaching in its effect as to invest these proceedings with an importance to all trade unionists that can hardly be exaggerated. Expulsion from their unions of convinced trade unionists, as both these plaintiffs are said to be, is in these days of nationally organized labour no light thing. Mr. Stevenson, a representative of one of the unions concerned, described at an interview before action what such expulsion involved to a man in the position of the plaintiffs: 'Naturally he would become a non-unionist, and other members of our association will not work with non-unionists.'

That is the position.' In other words, he would be in danger of becoming what Lord Moulton in another connection once described as 'an odd lot' in the labour world. It is hardly too much to say that to such men as the plaintiffs expulsion from the union is little less than a sentence of industrial death...

If on the trial of the action it is found that the Union wrongfully and illegally suspended and expelled a member from membership the Union must be responsible for damages flowing from its wrongful and illegal act, namely, in the preventing such person from obtaining employment as a Union member. *Kuzych v. Stewart et al* (1944) 4 Dominion Law Reports 775.

Victoria Workmen Lose Appeal in Voting Time Cases

The decision of Magistrate Hall of Victoria, B.C., dismissing a charge laid by the Crown against Falconer Marine Industries Limited for unlawfully refusing "to grant an elector in its employ at least two additional hours for voting, as provided for in Section 47 of the Dominion Elections Act" (L.G. 1945, p. 1533), was affirmed in the County Court of Victoria on November 9, 1945.

Judge Shandley, considering himself bound to construe the Act so as to make it available for carrying out the object of Parliament, stated that the words "at least two hours" meant that "if an employee has no time of his own, other than noon hour, for voting, his employer shall allow him a reasonable period of time (and if necessary as much as two hours) to do so, without deduction of pay". Since the appellant finished work at 4.30 and on polling day (June 11, 1945) was allowed to go at 4 p.m. without loss of pay for the half-hour, his employers had complied with the statute.

A similar appeal, with the Victoria Machinery Depot Company Limited as respondent, was also dismissed with costs. *Noble and Falconer Marine Industries Limited; Thordarson and Victoria Machinery Depot Company Limited*, Victoria County Court, November 9, 1945.

Ontario Appeal Court Dismisses Action Against Department Manager for Damages for Benzol Poisoning

The Ontario Court of Appeal on October 16 affirmed a judgment of Mr. Justice Roach dismissing an action for damages for negligence against the manager of the leather-products division of Durable Waterproofs, Limited. (L.G. June, 1945, p. 920). The plaintiff had suffered from benzol poisoning after applying to handbags cement which, unknown to her, contained benzol. The Workmen's Compensation Board had paid her medical expenses and

compensation for loss of earnings between November 23, 1942 and April 19, 1943.

The trial judge held that, under the Workmen's Compensation Act, the plaintiff, since she had elected to claim compensation, had no right of action against the defendant and that only the Workmen's Compensation Board was entitled to bring such an action. Moreover, the defendant was not considered negligent since he was ignorant of the dangerous nature of the cement, and it was not on the defendant but on the employer that the Factory, Shop and Office Building Act imposed certain duties.

The members of the Court of Appeal arrived at the same conclusion by somewhat different reasoning. Chief Justice Robertson and Mr. Justice McRuer agreed with the trial judge that the plaintiff had failed to establish negligence at common law on the part of the defendant. As regards the argument of the appellant that the respondent (defendant) was an "employer" within the meaning of the Factory, Shop and Office Building Act and had not carried out the obligations imposed on him by that Act which would have protected the appellant, these members of the Court were in agreement that the respondent did not come within the definition of "employer".

"Employer" in the factory law means.

any person who in his own behalf, or as the manager, superintendent, overseer or agent, has charge of any factory..... and employs persons therein.

The "employer" was required to ventilate the factory so as to render harmless as far as possible any fumes or gases. The trial judge's holding was maintained that the respondent was not the one who employed the workpeople and that he had not charge of the factory in the sense that he was required by the Act to provide proper ventilation.

The Chief Justice, who expressed the opinion that the plaintiff had suffered substantial injury and that the amounts allowed her under the Workmen's Compensation Act were not full compensation for her loss and injuries, considered that since the appellant's case, based on the factory law, depended upon establishing that the respondent was an "employer", it was unnecessary that the action should be kept alive in order that the Workmen's Compensation Board might be asked to determine whether the appellant had any right of action against the respondent.

Concerning the contention that the regulations under section 55 of the Factory, Shop and Office Building Act required the respondent to take special precautions where benzol was used, Mr. Justice McRuer considered that, although there appeared to be no doubt that the Durable Company was required to take

certain precautions, it could not be said that these were duties devolving on the respondent. He continued:

If civil consequences flowed from S.55 and the regulations, they were imposed on the Durable Company, and not on employees in the respondent's position. This view was fortified by an examination of the penal sections, which recognized the primary responsibility of the person who kept the factory, but at the same time provided for punishing the individual employee who might be actually at fault. His Lordship could not read into these sections an implication that a senior employee was to be rendered civilly liable for the failure of one under him to observe the provisions of the statute.

Holding that the appellant, whatever rights she might have, had not made out a cause of action against the respondent, he considered it unnecessary to deal with the question as to whether the Court should stay proceedings until the parties had applied to the Workmen's Compensation Board for a ruling as to whether the plaintiff's right of action had been taken away by the Workmen's Compensation Act.

Mr. Justice Laidlaw, on the other hand, directed his attention only to the issue raised by the respondent's plea that the plaintiff had no status to maintain her action because she had applied for and received compensation from the Workmen's Compensation Board. He considered it unnecessary and undesirable to express any opinion on the many other questions argued before the Court. He agreed with the contention that the Workmen's Compensation Board had sole jurisdiction to determine whether the action was one the right to which had been taken away by the Workmen's Compensation Act. Following the decision of the Supreme Court of Canada in *Dominion Cannery, Ltd., v. Costanza et al* (1923) S.C.R. 46, Mr. Justice Laidlaw would have directed that proceedings should be stayed to permit of an application to the Board for its decision on this point. *Siebel v. Vereschack* (1945) Ontario Reports 748.

Supreme Court Upholds Quebec Court in Refusing Injunction Against Wartime Labour Relations Board

On November 31, 1944, the Supreme Court of Canada dismissed with costs an appeal by six employees of La Traversée de Lévis Ltée against a judgment of the Quebec Court of King's Bench (L.G., 1945 p. 1536) affirming a decision of the Quebec Superior Court. The latter refused an application for an injunction to restrain the Wartime Labour Relations Board of Canada from taking a ballot among the employees of the company to determine the bargaining agent. *Demers et al v. Wartime Labour Relations Board et al*.

U.S. Court Upholds Illinois Law that Unincorporated Union Cannot be Sued

The U.S. Circuit Court of Appeals, Seventh Circuit, by a two to one decision on November 28, 1945, ruled that under the "decisional law" of Illinois an unincorporated union cannot be sued. The action was one for damages for alleged libel brought by the Pullman Standard Car Manufacturing Company against a Local of the United Steelworkers of America and its officers. The lower court had dismissed the charges against both the union and its officers. The Circuit Court, affirming the judgment as to the union, unanimously found the individual defendants guilty.

The local union's newspaper had charged the Pullman Company with "falsifying its profits to the public and also falsifying to the workers, all in the name of Patriotism". The Court held that this statement was libellous.

The capacity to sue or be sued is determined by the law of the State, according to the Rules of Civil Procedure for District Courts of the United States, except that an unincorporated association may sue or be sued in its common name for the purpose of enforcing for or against it a substantive right existing under the Constitution or laws of the United States. Since no federal right was involved in this case, the majority opinion was that it was governed by the common law of Illinois which has not been changed in this respect by statute and that the common law on this point had been set out in recent decisions of the Illinois Appellate Court. The latter had found that an unincorporated association could not be sued. The plaintiff's contention that the National Labour Relations Act, and the certification of the union under it, had changed the common law of Illinois regarding the suability of unincorporated labour unions was rejected by two members of the Court. As one judge stated:

The rule thus proclaimed by the courts of Illinois must be accepted by this court regardless of whether we agree or disagree, and also regardless of any status which the union may assume by reason of federal legislation.

To think otherwise means that Congress by recognizing the legal entity of a union for the purpose of federal legislation may deprive a State of the right to determine who may be sued in its Courts. I think it doubtful if Congress could do this by direct legislation, but whether so or not, it should not be held to have done so by an indirect route.

The third judge, dissenting, expressed his opinion thus:

Under the National Labour Relations Act, the local union here involved has been certified as an exclusive bargaining agent. It has voluntarily availed itself of that

status through the consent of its membership. It makes leases and contracts in its association name and it is required to be dealt with as a juristic personality and entity entirely separate and apart from its members To say that either Congress or the Labour Union intended that the employer could not likewise seek relief in a court of law against the same entity for fraudulently accomplishing the purposes of

the Act would be to attribute to them a characteristic which, to say the least, would not be charitable In my judgment, the local here involved, operating as it is under present Federal and State laws, is not a naked unincorporated association as that term was originally understood. *Pullman Standard Car Manufacturing Co. v. Local Union 2928 of United Steelworkers of America*, 17 Labour Relations Reporter 484.

Woodworking Machinery Regulations in Great Britain

THE Woodworking Machinery Regulations made in 1922 and amended in 1927 under the Factory and Workshop Act, 1901, have been amended by the Woodworking (Amendment of Scope) Special Regulations, 1945, made on September 28 under the Factories Act, 1937. The principal object of the Special Regulations is to bring the main regulations into line with the 1937 Act. Thus, the Regulations will now also apply to the sites of certain building operations and works of engineering construction not covered by the 1901 Act, and to which apply provisions of the 1937 Act concerning special regulations for the health and safety of workers.

The principal Regulations stipulate that no person may work at a woodworking machine unless he has been sufficiently trained or is under the adequate supervision of a person thoroughly familiar with the working of the machine. A machine in motion must have sufficient clear and unobstructed space around it, and the floor must be in a good and level condition, free from chips and not slippery. The Regulations also call for provision of efficient stopping and starting appliances for woodworking machines.

Lighting, whether natural or artificial, must be adequate, and, where it is artificial, must not impinge directly on the eyes of the operator. No woodworking machine may be operated in any underground room certified to be unsuitable in any respect by the Chief

Inspector of Factories, and wherever practicable, the temperature in any part of a room where a machine is being operated must be at least 50 degrees.

A circular saw below the bench table must be fenced with two metal plates, with a riving knife behind and in a direct line with the saw, a guard covering the top and a suitable pushstick for use at the bench of the saw. A plain band saw must be guarded so that the blade, except the portion between the bench table and the top guide, is enclosed, and both sides of the bottom pulley and the front of the top pulley must be encased with sheet metal.

No planing machine not mechanically fed may be used for overhand planing unless it is fitted with a cylindrical cutter block. When used for overhand planing, the machine must have a "bridge" guard capable of covering completely the cutting slot in the bench. The feed roller of a planing machine used for thick-nessing, except a combination machine, must also have an efficient guard.

Cutters of spindle moulding machines must be guarded and where this is impracticable, the wood being moulded must be held in a jig or holder so constructed as to reduce as far as possible the risk of accident. A "spike" or pushstick must also be available. The cutters of the chain of a chain mortising machine must be enclosed as much as is practicable.

Strikes and Lockouts

Strikes and Lockouts in Canada During December, 1945

DURING December, 1945, strike activity in Canada declined as compared with the previous month. There were 11 fewer strikes on record and the number of workers involved and the time loss in man-working days fell sharply. Preliminary figures show 13 strikes in existence during December, 1945, involving 19,619 workers, with a time loss of 261,619 days, as compared with 24 strikes in November, 1945, with 31,010 workers involved and a time loss of 441,938 days. In December, 1944,

there were 11 strikes, involving 2,312 workers, with a time loss of 12,526 days.

Preliminary figures for 1945 show 182 strikes, involving 90,509 workers, with a time loss of 1,478,311 man-days, as compared with 199 strikes in 1944, in which 75,290 workers were involved and a time loss of 490,139 days was caused.

The strike of motor vehicle factory workers at Windsor, Ont., and resulting sympathetic strikes at Windsor, all of which were term-

* Preliminary figures.

† Strikes un-terminated at the end of the previous year are included in these totals.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and the figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

inated in December, accounted for a large part of the time loss during the month. They were responsible for more than 82 per cent of the workers involved in all strikes and more than 91 per cent of the time loss.

Of the 13 strikes recorded for December, 1945, two were settled in favour of the employers, two were compromise settlements and six were indefinite in result, work being resumed pending final settlement. At the end of the month three strikes were recorded as

unterminated, namely: bakery workers and drivers, Toronto, Ont., compositors, Winnipeg, Man., and shingle mill workers at New Westminster, B.C.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1945*

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars†
	Establish- ments	Workers		

Strikes and Lockouts in Progress Prior to December, 1945

MANUFACTURING— <i>Vegetable Foods—</i> Bakery workers and drivers, Toronto, Ont.	1	558	10,800	Commenced November 25; for a union agree- ment, providing for union shop, check-off, etc.; unterninated.
<i>Printing and Publishing—</i> Compositors, etc., Winnipeg, Man.	2	120	2,500	Commenced November 8; for a new agree- ment providing for increased wages and other conditions; unterninated.
<i>Miscellaneous Wood Products—</i> Shingle mill workers, New Westminster, B.C.	1	60	1,250	Commenced November 28; for a union agree- ment providing for increased wages, etc.; unterninated.
<i>Metal Products—</i> Motor vehicle factory workers, Windsor, Ont.	3	10,000	225,000	Commenced September 12; for a new agree- ment providing for union shop, check-off, grievance procedure, etc.; terminated Dec- ember 29; conciliation, federal, and refer- ence to arbitration; indefinite.
Automotive parts factory workers, Windsor, Ont.	19	6,127	13,500	Commenced November 5; in sympathy with strike of motor vehicle factory workers, September 12; terminated December 3; return of workers; in favour of employers.
<i>Miscellaneous Products—</i> Optical lens factory workers, Toronto, Ont.	1	100	750	Commenced November 6; for a union agree- ment; terminated December 11; negotia- tions and reference to arbitration; indef- inite.

Strikes and Lockouts in Progress During December, 1945

MANUFACTURING— <i>Fur and Leather Products—</i> Tannery workers, Penetanguishene, Ont.	1	68	153	Commenced December 7; because two re- turned soldiers were allegedly not directed to proper jobs; terminated December 10; return of workers; in favour of employer.
Tannery workers, Kitchener, Ont.	1	63	378	Commenced December 10; against $\frac{1}{2}$ day lay- off of 5 workers and for settlement of various grievances; terminated December 15; conciliation, provincial; compromise.
<i>Textiles, Clothing, etc.—</i> Textile factory workers, Montreal, P.Q.	3	2,349	7,000	Commenced December 4; protesting Finding and Direction of RWLB; re wage and task adjustments and against dismissal of 7 workers allegedly for union activity; ter- minated December 8; conciliation, provin- cial, and return of workers pending inves- tigation; indefinite.
<i>Miscellaneous Wood Products—</i> Furniture factory workers, Victoria, P.Q.	1	(a) 54	65	Commenced December 6; against dismissal of a union worker when staff reduced; ter- minated December 7; conciliation, provin- cial, and reference to arbitration; indefinite.

(a) 70 indirectly affected.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the March, 1945, issue in the review "Strikes and Lockouts in Canada and Other Countries". The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the various countries for which such figures are available but many countries are no longer reporting due to unsettled conditions. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British Ministry of Labour Gazette publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in October, 1945, was 229, and 18 were still in progress from the previous month, making a total of 247 during the month. There were 92,300 workers involved and a time loss of 1,108,000 working days was caused.

Of the 229 stoppages which began during October, 27 arose out of demands for advances in wages, 63 over other wage questions, nine on questions as to working hours, 40 on questions respecting the employment of particular classes or persons, 77 on other questions respecting working arrangements, ten over questions of trade union principle and three were in support of workers involved in other strikes.

Australia

Preliminary figures for the first quarter of 1945 show 253 work stoppages. The number of workers involved, both directly and indirectly, was 63,347, and the time loss was 274,725 man-days.

United States

Preliminary figures for November, 1945, show 335 strikes and lockouts beginning in the month, in which 405,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 6,100,000 man-days. Corresponding figures for October, 1945, are 455 strikes and lockouts, involving 560,000 workers, with a time loss of 7,800,000 man-days.

Prices

Prices, Retail and Wholesale, in Canada, December, 1945

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THERE was a further fractional gain in living costs in Canada between November 1 and December 1, 1945, the Dominion Bureau of Statistics composite index rising 0.2 points to 120.1 during that period. Food prices supported by increases in citrus fruits, fresh vegetables and butter averaged 0.3 points higher at 134.3, while fuel and light at 107.1 and home furnishings and services at 119.5 were up 0.5 and 0.1 points respectively. Other groups continued unchanged, rentals at 112.3, clothing at 122.5 and miscellaneous items at 109.6.

On the base August 1939=100 bi-monthly cost-of-living indexes for eight regional cities registered moderate gains between October 1 and December 1, 1945. Support came mainly from higher food prices though at Toronto fuel and light averaged higher, while in Halifax and Vancouver clothing was firmer. In the home furnishings and services group, fractionally firmer prices were recorded at

some centres while in others declines occurred. A cost-of-living increase of 0.8 points to 118.7 for Vancouver was the highest registered, followed next by a gain of 0.5 to 117.6 for Edmonton. Three cities, Montreal at 122.6, Toronto at 118.1 and Saskatoon at 120.7 were each up 0.4 over October, while indexes for the remaining three cities, Halifax at 119.6, Saint John at 119.7 and Winnipeg at 117.0 each recorded a gain of 0.2.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada at the date under review.

The prices of the staple food items included in the table are all used in the calcu-

(Con. on page 111)

* For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.

† Commodities in the cost-of-living index excluding rents and services.

lation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement

of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices was not warranted although chain store prices are used in the calculation of the index.

(Con. on page 116)

(a) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

COAL AND RENTALS IN CANADA, DECEMBER, 1945

Canned Vegetables			Beans, common, dry white, per lb.	Onions, cooking per lb.	Potatoes, per 15 lbs.	Prunes, medium size, per lb.	Raisins, seedless, bulk, per lb. (a) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a \$4 spread centred around each city average.

Table III is designed to show the variation in the retail prices of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the

percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is now being included in Table I.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Explanatory Note as to Cost-of-living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between \$600 and \$2,800 in 1938. The average expenditure was \$1,413.90, divided as follows: food (31.3 per cent), \$443; shelter, (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.50; clothing (11.7 per cent), \$165.80; home-furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not

(a) First of month. (b) Middle of month. (c) Last week of month. (d) Quarterly. (e) New wartime price series on base December 1942=1000, computed quarterly beginning March, 1943. (f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised.

directly represented in the index brought the total family living expenditure to \$1,453.80.

A description of the cost-of-living index, how it is calculated, and the complete list of items included in each of the principal groups, food, fuel, rent, clothing, home furnishings, etc., with their weight, was published in the LABOUR GAZETTE for July, 1943, page 1057.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, 1941, except under the regulations of the Wartime Prices and Trade Board. The activities of the Board in the operation of the price control policy are summarized from time to time in the LABOUR GAZETTE under the title *Price Control in Canada*.

Wholesale Prices, November, 1945

Advances in animal and vegetable products and non-metallic minerals in November in-

creased the general wholesale commodity price index 0.2 points to 103.1. The animal product index rose 0.9 points to 109.8, due to higher quotations for steers, calves, lambs, butter, cheese, eggs and codfish which outweighed a minor recession in hogs. A gain of 0.3 to 96.6 for vegetable products reflected strength in potatoes, onions and lemons. Oranges and hay were lower in this section. In the non-metallic group, a gain of 0.3 to 101.4 was supported by higher quotations for imported bituminous coal and brick which overbalanced weakness in sulphur. Other groups continued unchanged, fibres, textiles and textile products at 91.8, wood, wood products and paper at 117.6, iron and its products at 115.1, non-ferrous metals at 79.7 and chemicals and allied products at 98.9.

Canadian farm product prices rose a further 0.5 to 106.1 in November. Animal products advanced 0.7 to 125.5 in the same interval due to firmer quotations for live stock and eggs. Stronger prices for potatoes, onions and rye in the vegetable products group outweighed a minor decline in hay to increase the index 0.4 to 94.5.

Conference of British Columbia Unions, Trades and Labour Congress

DELEGATES representing 82 affiliates of the Trades and Labour Congress of Canada drawn from as many local unions in British Columbia convened in a two-day conference late in the autumn. Over 200 resolutions dealing with social and economic subjects of interest and importance to the workers of the province were brought before the meeting. The Provincial Executive was authorized to place the decisions arrived at, before the appropriate Provincial and Federal authorities, or other bodies covered by the resolutions.

Hours of Work

Several resolutions were presented with respect to hours of work. Some of these suggested reductions of hours to 30; others to 36, but the greater number favoured 40 hours per week. The resolution that was eventually endorsed proposed a maximum work-week of 40 hours with a proviso that when employment conditions warranted, the work-week be reduced to 30 hours, with the same take-home pay as when the longer week was worked. It was urged that legislation along these lines be enacted without delay and that the law should be emphatically enforced. It was argued further, that the legislation should include not only factory workers but all workers, especially

seamen, domestic workers and those in the service trades. The conference deprecated overtime work in principle, but conceded that it was unavoidable at times and in such cases an increased hourly rate should be paid.

Minimum Wages

Asserting that existing minimum wages for women in certain industries were inadequate, the Executive was urged to press for a minimum wage of \$24 a week for all females employed in trades, industries or stores in British Columbia, and that an adjustment be made to hourly rates, part-time, and apprenticeship scales to conform to that scale. Approval was given to the request of the Automotive Workers' Maintenance Union that workers in that industry be included in the Act by adequate minimum wage standards. By a blanket resolution covering many trades, the conference endorsed a 60 cents per hour minimum wage for the province.

Holidays with Pay

Resolutions were agreed to asking for both Federal and Provincial legislation providing workers, including those who work on ships, domestic workers, and itinerant workers, with

annual vacations with pay. It was held, too, that legislation should be enacted to compel employers to pay their employees for any statutory holiday which falls in a week in which such employees are partly or wholly employed. The conference endorsed resolutions asking the Provincial Government to amend the Shops Regulation and Weekly Half-holiday Act to require any class or classes of shops in a community to close one full day instead of one half day each week of the year, exclusive of Sundays, upon application signed by three-fourths of those concerned. It was asserted that many firms already closed voluntarily on Wednesday of each week and the intent of the resolutions was to make it compulsory for the remainder to close also.

Collective Bargaining

The conference went on record as favouring a revision of P.C. 1003 with a view to improving collective bargaining procedure. It was held too, that legislation should be enacted to make collective bargaining, check-off, and union security compulsory and to outlaw company unions.

Education and Health

It was urged that the school leaving age should be raised to 18 years; that text books should be provided free; and that a university education should be made available for all students capable of qualifying for it. Vocational training in British Columbia was totally inadequate, it was claimed, and representations were to be made to the provincial government to utilize more fully the federal grant to assist the technological advancement of all workers.

Turning to the matter of health, the conference demanded that the federal government eliminate what was termed "monopolistic strangling in laboratory research". Free medical and nursing services were advocated for children in public schools. Health conditions in many factories were criticized adversely and legislation to correct specific defects in plumbing and ventilation was urged. Similarly, unsanitary conditions in construction camps were criticized and improvements asked for. It was suggested that the federal government enact health insurance legislation

without delay. Failing that, the conference was of the opinion that the provincial government should put the 1936 Health Insurance Act into operation.

Union Security

The conference decided to ask the government to enact legislation making it mandatory upon employers to sign union shop agreements when requested to do so by a majority of their employees. This would also include the check-off and the outlawing of company unions. Objection was taken to the so-called "industrial file system" by which employers maintain a personal record and labour history of employees, which, it was claimed, constituted "black lists".

Pensions and Unemployment Insurance

It was claimed that old age pensions were "totally inadequate" and that regulations for their revision were long overdue. It was suggested that pensions should be payable at age 60 and the monthly payment should be increased to \$50 with free medical, dental and hospital care, and the abolition of the means test.

An increase of at least 50 per cent in unemployment insurance benefit was asked for and home service employees and longshoremen should be brought under the Act. The conference was of the opinion that the section of the Unemployment Insurance Act, (33 (b)) which permits recipients of benefit to earn as much as \$1 a day without affecting their right to receive benefit should be rescinded, inasmuch as it made it possible for employers to take unfair advantage of workers.

Other Problems Discussed

Among other subjects that received the attention of the conference were: (1) closer unity among organized labour bodies in Canada and affiliation with the World Federation of Trade Unions; (2) more adequate methods of voting in provincial elections, to prevent the alleged disfranchisement of many voters; (3) the annulment of the Company Towns Act; and (4) the return of the administration of labour and social legislation by the federal to the provincial government wherever and whenever possible.

Conference of Quebec Provincial Federation of Labour

A special one-day Conference of the Provincial Federation of Labour of Quebec was held in Montreal on October 20. Owing to government restrictions with respect to the number of delegates permitted to attend conventions, the Executive had limited representation to not more than two delegates from each local union. There were 71 present, representing 49 trades and labour councils in widely separated communities throughout the province.

In addition to the report of the Executive, thirty resolutions were brought before the Conference, which met under the chairmanship of President Elphège Beaudoin.

The report of the Executive Committee reviewed the work of the Federation during the interval following the previous convention. It included a review of the legislative program submitted to the provincial government early in 1945 with respect to the Apprenticeship Aid Act and amendments to the Labour Relations Act, the Family Allowances Act, the Workmen's Compensation Act and certain phases of the Sales Tax legislation.

Action taken in the form of resolutions included the following:

(1) Support was given to the memorandum submitted to the Dominion Government in August by the Trades and Labour Congress of Canada, suggesting, *inter alia*, a modification of Orders in Council P.C. 1003 and 9384 and also the adoption of certain measures to prevent unemployment. With respect to the latter, a six-point program had been submitted, urging (i) that all citizens who have been engaged in essential civilian industry be allowed immediately a "reconversion pay" during the period of dislocation, of one month's pay for each year of service up to three years; (ii) the adoption of the 40-hour week without reduction in pay; (iii) the prohibition of general reductions in pay; (iv) the lifting of restrictions on building materials; (v) the immediate commencement of necessary public works; (vi) the prompt reconversion of all war plants suitable for peace-time production.

(2) The Executive was instructed to urge upon the provincial government amendments to the Quebec Workmen's Compensation Act so as to provide full compensation to any victim of an industrial accident until he has recovered sufficiently to resume his regular

work, or until such time as the Commission or his employer furnishes him with such light work as he is able to perform.

(3) Modifications were asked in the Labour Relations Act to the end that only managers "who have power to hire or fire workers" be deprived of the protection of the Act and that the interpretation of the word "employee" be expanded to include "all persons whether temporary or casually employed."

(4) It was urged that the government be petitioned at its next session to amend certain sections of the Collective Labour Agreements Act that cover the competency of apprentices during, and at the conclusion of their apprenticeships, and the fees that they shall be required to pay.

(5) It was decided unanimously to suggest that the school-leaving age be raised from 14 to 16 years.

(6) The Executive was instructed to press for legislation providing for vacations with pay similar to that enjoyed by workers employed in war munitions work and shipbuilding under Federal Government regulations and also in force in some of the other provinces.

(7) The Conference asked that the pensionable age be lowered to 60 and that the minimum monthly pension should be \$30 with no deductions on any annual incomes of less than \$300.

(8) Increases were asked in the unemployment insurance benefit paid to married unemployed workers and it was urged that the clause disqualifying workers because of strikes be modified. It was decided to ask for the co-operation of the Trades and Labour Congress of Canada in connection with these petitions. The delegates insisted that the Unemployment Insurance Commission should not be administered by the Minister of Labour, but should be maintained as a Commission, of which a recognized representative of organized labour should be a member.

Other resolutions urged the abolition of selective service; the increases in the exemptions for income taxes; the immediate removal of restrictions of food products as imposed under the War Measures Act; and that no immigration to Canada be permitted until such time as the admission of immigrants "would not be prejudicial to the standard of living and the welfare of the Canadian people."

Group Medical Plan Sponsored by Associated Medical Services

MORE than eight years ago, Associated Medical Services Incorporated, a non-profit organization, sponsored by the Ontario Medical Association, initiated its voluntary contributory health insurance plan (L.G., 1937, pp. 263 and 597). This organization is still the only one in Ontario which accepts the individual family group as a basis of risk for the cost of medical, surgical, obstetrical, accident and hospital care. In spite of the difficulties encountered during the war, the Associated Medical Services has an enrolment at the end of the eighth year of its life of some 34,000 persons. More than \$45,000 is expended each month for medical and hospital services.

With a view to broadening its services, A.M.S. recently announced the inauguration of a group medical and surgical plan to permit budgeting by groups for the cost of major illness resulting from sickness or accident. The new plan covers the expense of doctors' services (exclusive of obstetrics) in excess of \$25 on each hospital admission, up to a maximum of \$800 in any twelve consecutive months. The subscription fee for this service is 65 cents per month per person. Hospitaliza-

tion, exclusive of the first two days' expense in any 14-day period, or part thereof, may also be included for an additional fee of 35 cents per month. Groups may be considered on the basis of (1) employment, such as trade unions, or factory or office workers; (2) geographically, as citizens of a clearly defined urban or rural area; (3) fraternal societies, etc.

It is required, however, that 50 to 100 per cent of any group must be enrolled to assure a fair ratio of good risks. This ratio applies for both male and female members of groups. No medical examination will be necessary and there is no age limit for applicants. Benefits will be continued during a lay-off or leave of absence, provided the payment of subscriptions is continuous; and arrangements may be made for the extension of the plan should a group member find it necessary to leave the group.

Under the new group plan the family of an employee may be included. This is a feature which is expected to appeal to both employers and employees since the cost of medical and hospital care for the employees' family is frequently a source of great hardship.

Survey of Canadian Homes

SUPPLEMENTARY study of the data collected by Lever Brothers, Limited, in its survey of Canadian homes (L.G. Aug., 1945, p. 1100) resulted in the Company issuing an additional report early in October. While the latest statement refers more particularly to Ontario homes, comparative statements in the report give it a more general significance. To quote: "Houses crammed end to end in poorly planned ribbon development deprive householders of sunlit rooms. Over a quarter of the homes in the cities and small towns of Ontario need artificial light in some room of the house during the daytime. On farms one would expect spacious surroundings to allow sunlight indoors. Surprising, therefore, is the finding that 11 per cent of Ontario farmhouses need lights on during the day. Clustered out-buildings added to the main building are reported as the reason.

"But in the matter of cooking equipment Ontario housewives are better off than their Canadian sisters elsewhere. Even so there is still plenty of sales opportunity for manufacturers of this equipment. Almost one in seven city women, nearly half of village women

and two-thirds of farm women must still stand over hot stoves burning coal, wood or oil every time they cook. In the winter many of them cook on the stoves which are still relied on to heat their homes.

Homes' Survey by the five main geographic regions, Lever Brothers Limited have revealed how living conditions in moderate and low-cost homes compare with each other in different parts of Canada and with the country as a whole . . .

"Women researchers visited homes throughout Ontario and the rest of Canada and interviewed housewives to find out how their homes meet basic household needs in terms of shelter—feeding—and cleaning. They found that Ontario houses are amongst the poorest planned in Canada from the standpoint of getting sunshine indoors. Equal to the national average of 27 per cent of Canadian city homes which need artificially lighted rooms during the day, Ontario city figures are exceeded only by Quebec with 39 per cent. In small towns (29 per cent) and on farms (11 per cent) Ontario figures for gloomy rooms are the worst in Canada, and exceed the all-Canada

average by 12 per cent and four per cent respectively.

"All but one per cent of Ontario city people have running water laid on in their homes. Less well off and eight per cent worse than the national average are small town homes, with 36 per cent deficiency. Half of all Ontario farms are similarly handicapped, although they outdo their fellow Canadians, two-thirds of whom must pump water from a well, stream or other primitive source.

"The hot water necessary for so many household tasks is not always conveniently obtainable from taps. More people have it in winter when furnaces are lit. In summer time, just over a third of Ontario city people have plentiful supplies at all times. Another 42 per cent have it by lighting gas, electric or coal heaters, and 19 per cent must heat it in kettles or other containers on top of the stove. This inconvenient method is also used by 69 per cent of small town people and by 80 per cent of farmers' wives.

"In the matter of bathroom equipment this province is a little better than average. Regular bathtubs are lacked by 13 per cent of Ontario city people, by 60 per cent of small town folk, and by 66 per cent of farmers. The comparable national shortage is 18 per cent, 54 per cent and 75 per cent. Wash basins, the other most common bathroom piece, are to be found in four out of five city homes, almost half the small town homes, and almost a third of farm homes. Showers are rare amongst the homes surveyed and in Ontario they seem to be no more popular than in any other part of Canada . . .

"Overcrowding, which is Canada's worst housing headache, has not missed Ontario.

Aggravating it are boarders, lodgers and hired help, who live in one out of every five city homes, every eighth village home and more than a quarter of farm houses. To add to the crush, near relatives—married daughters, sons, parents, grandparents, etc.—are living with nine per cent of city families, seven per cent of village families and 18 per cent of farm families. This overcrowding is not all due to wartime shifts in population, as investigators found no surplus of living accommodation anywhere in Canada.

"A result of this congestion is to be found in the number of Ontario people who report they have no bedrooms to sleep in. In Ontario cities 11 per cent, in villages 12 per cent and on farms two per cent have to bed down in living rooms, dining rooms, kitchens, or anywhere a cot or a couch can be made up.

"For a great many foods cooling is just as important as heating is for others. Ontario leads all other regions in ownership of refrigeration facilities. Grouping mechanical and ice refrigerators together, Lever's found that 93 per cent of urban dwellers, three-quarters of non-farm rural people, and almost half the farmers questioned have such equipment . . .

"In a general observation of the state of Ontario house interiors, Lever investigators found that more than half are cracked, discoloured and in need of paint, paper and general refinishing. More than one in every eight houses in Ontario cities and small towns are so run down that only major repairs or replacements will restore the original appearance of walls, floors and ceilings. In equally unsatisfactory condition are almost a quarter of Ontario farm houses."

Mining and Distribution of Coal in Alberta

The Annual Report of the Mines Branch of the Alberta Department of Lands and Mines for 1944 states that there were 180 coal mines in operation in the province at the close of that year. They employed 8,943 men during the month of December, this being an increase of 307 as compared with the corresponding month in 1943. The average monthly total of men employed during the year was 8,375.

The output of coal in the province during the year was 7,427,433 tons. Of this, 1,424,293 tons were sold for consumption in Alberta;

2,447,225 tons were shipped to other provinces; 266,643 tons were exported to the United States; 2,583,101 tons were sold to railway companies; 20,296 tons were used in ships' bunkers; 1,064 tons were to be sold to Alaska and the remainder was used in making coke and briquettes and for producing power at the collieries, etc., while relatively small amounts were put to stock or classified as waste.

It is noteworthy that while the amounts involved were not large, two new outlets for Alberta coal were found during 1944, namely Alaska and ships' bunkers.

Award on Issue of Union Security in Ford Dispute

Decision of Arbitrator, Mr. Justice Rand—Union Shop Disallowed But Compulsory Check-off for all Employees Provided

AS this number of the *LABOUR GAZETTE* went to press the arbitration award of Mr. Justice I. C. Rand on the issue of union security in the dispute between the Ford Motor Company of Canada and the International Union, United Automobile Aircraft and Agricultural Implement Workers of America, was received in the Department of Labour. Owing to the importance of this award, publication of the *LABOUR GAZETTE* was delayed so that the text of the report might be included.

The strike of employees of the Ford Motor Company, which commenced September 12, 1945, was terminated on December 20 when the union accepted the joint plan of settlement of the Dominion and Ontario Governments, the principal provision of which called for arbitration by a judge of the Supreme Court of Canada of points which could not be settled by collective bargaining negotiations.

Mr. Justice I. C. Rand was named as arbitrator and conducted hearings between January 9 and 15.

His award dealing with the matter of union security was issued on January 29. The text appears below.

Opening with a discussion of the basic principles of employer-employee relations within the framework of modern industrial society, the report proceeds to a consideration of the matter of union security in general, and the situation at the Ford plant in particular.

The terms of the award deny union shop, which had been asked by the union, but provide for a new form of union security, the compulsory check-off of union dues from the wages of all workers under the agreement whether union members or not. The award also provides for penalties against individuals in the case of "wildcat" strikes and against the union in the case of a strike called without a secret ballot of all employees.

A second award, dealing with administrative points in the collective agreement, follows the text of the first award.

Text of Award

In the matter of an arbitration between Ford Motor Company of Canada Limited and The International Union, United Automobile, Aircraft and Agricultural Implement Workers of America (U.A.W.-C.I.O.)

Award on the Issue of Union Security

The parties to this controversy have agreed to be bound on all points in dispute by the decision of an arbitrator. Ordinarily, the matter of arbitration is a claim for redress or an assertion of a right in respect of a contract or some other legal relation. In such a case the issue is clearly defined; it arises in an accepted legal setting and is to be decided on well recognized rules and considerations.

The task here has no such basis or simplicity. There is no legal right claimed to be violated and there is no specification or acceptance of the considerations on which a decision is to be founded. There is instead a contest of extra-legal relations and interests which in general must for the present at

least be resolved by the force of ethical and economic factors resting ultimately on the exercise of economic power. As I conceive it, from the social and economic structure in which we live I must select considerations which have attained acceptance in the public opinion of this country and which as principles are relevant to controversies of the nature of that before me; and having done that, I must apply them to the specific matters in hand. Such an inquiry involves an examination of so wide and general a field of social doctrine, that at the risk of appearing pedantic, and in what may seem a jargon-like vocabulary, I must deal briefly with what I think will be agreed upon as fundamental lessons of experience, in an orientation which now holds the stage in the economic drama.

Basis of Problem

Any modification of relations between the parties here concerned must be made within the framework of a society whose economic

life has private enterprise as its dynamic. And it is the accommodation of that principle of action with evolving notions of social justice in the area of industrial mass production, that becomes the problem for decision.

Certain declarations of policy of both Dominion and Provincial legislatures furnish me with the premises from which I must proceed. [In most of the Provinces and by dominion war legislation, the social desirability of the organization of workers and of collective bargaining where employees seek them has been written into laws. That desideratum the Ford Company accepts. The corollary from it is that labour unions should become strong in order to carry on the functions for which they are intended.] This is machinery devised to adjust, toward an increasing harmony, the interests of capital, labour and public in the production of goods and services which our philosophy accepts as part of the good life; it is to secure industrial civilization within a framework of a labour-employer constitutional law based on a rational economic and social doctrine. Its necessity arises from the actual implication of large scale industry in the life of labour and community and the mass of human relations thus created. Industry is seen to be integrated with the economic and social establishment and any disturbance in its scope or tempo sends out repercussions affecting interests which have been built up on the assumption of its continuance. The economic life and fortunes of men become hostages to that continuance, which in turn takes its place as part of the general security.

Now, that security is, here, in a democratic order which I think is government through the form of predominant individual opinion, but which assumes the presence of diverse opinion that may at any time become predominant and which at all times respects minority interests. The preservation of the individual as a centre of thought and action and its reconciliation with the general security is the end of that government. But unguarded power cannot be trusted and the maintenance of social balance demands that the use or exercise of power be subject to controls. Politically this resides in alert public opinion and the secret ballot.

[In the economic sphere there is the same necessity for counterchecks.] We have the institution of private property. This may be conceived in terms of natural right adhering to a free will, an absolutist concept; or in social terms, in which control of use is permitted to the individual until the general interest requires its modification. In the former sense, property becomes more or less identified with personality and its invasion tends to arouse a primitive savagery.

In industry, capital must in the long run be looked upon as occupying a dominant position. It is in some respects at greater risk than labour; but as industry becomes established, these risks change inversely. Certainly the predominance of capital against individual labour is unquestionable; and in mass relations, hunger is more imperious than passed dividends.

Against the consequence of that, as the history of the past century has demonstrated, the power of organized labour, the necessary co-partner of capital, must be available to redress the balance of what is called social justice: the just protection of all interests in an activity which the social order approves and encourages. [But organized labour itself develops and depends upon power, which in turn must be met in balancing controls in relation to the individual members or workers over whom it may be exercised, as well as to industry and public.] To avoid misapprehension, I should add that I do not believe in any special deposit of virtue in any group. One difference between people in this respect is that some are aware of the persistence of an original taint.

That we cannot draw back and try to reverse the whole progress of the last 100 years in labour-employer relations, that we must go through to a higher evolution of them must, I think, be accepted as axiomatic. [On that assumption there are two fundamental views to be taken on the mode of bringing that progress about: either to leave it as the issue of economic war in all its ferocity and waste or as the gradual rationalization of an area where interests are both common and conflicting.] That we must have some sort of law or convention regarding these relations is inescapable: whenever human beings are drawn together socially or economically, a rule of that nature by whatever name we call it becomes imperative, and the stronger the conflict of interest the more insistent the demand for settled understandings. But we preserve the conquests of these understandings as we do of human rights generally, and they are taken on by new groups as of course. Is there any doubt at this time in serious minds of the right of labour to organize? In fact, our law now declares that right. The question is whether the remaining controversies are to be settled in the mode of war or reason. Considering the immense stage in which these relations now appear, it would be a sad commentary on what we call Christian civilization if every foot of that field would have to show the waste of conquest by economic struggle. There is still and may always be a residue of this area which it will be beyond the powers

of man to conquer by the force of his intellectual or spiritual faculties and a similar residue may remain in economic relations. But the measure of our civilization will be the degree to which that residue is diminished in scope.

[From the foregoing I draw the following conclusions. The organization of labour must in a civilized manner be elaborated and strengthened for its essential function in an economy of private enterprise. For this there must be enlightened leadership at the top and democratic control at the bottom. Similarly as to capital. The absolutist notion of property like national sovereignty must be modified and the social involvement of industry must be the setting in which reconciliation with the interests of labour and public takes place. This means the rationalization of the individual industrial organism. Where rational considerations meet in an apparent impasse, a new factor must be taken into account, the issue of ultimate economic conflict.] Apart from the question of wages, to men of good will who will recognize their obligation to the social order which makes possible and safeguards the very activity whose rights they defend, it ought not to be necessary that the inevitable loss to every interest should be actually suffered in labour strike; at the lowest, an intelligent appreciation of relative strengths including the public conviction by which these relations must ultimately be decided would obviate that loss; and I would not accept the view that the development of such judgment is beyond human powers. Hitherto the tendency has been to treat labour as making demands quite unwarranted on any basis of democratic freedom in relation to property and business and the ordinary mode of settling labour disputes, a piecemeal concession in appeasement. I cannot see much effort to place conciliation on principle and although at once I disclaim any hope of doing more than to suggest principle through a slightly altered approach, I must at least make that attempt.

The Particular Problem

From these general considerations I pass to the particular problem. It would, I think, be futile to try to fix detailed responsibility for the past unsatisfactory relations between the Ford Company and its employees. [The primary and essential error lay, in my opinion, in what I have called an absolutist concept of property; the plant and business belonged to the Company; the Company was buying labour as a commodity; and labour had no more direct interest in the conduct of any part of the business than the seller of any other

commodity. Whatever of fairness or reasonableness was to supplement high wages lay exclusively in the wiser judgment of management. It was an arm's length relation. This attitude could do only one thing: engender a like attitude on the part of employees; and a deterioration into tension and hostility was inevitable. Particularly was that inevitable when the nature of the operations is considered. Here is a highly congested and articulated undertaking; the work generally is the repetition of limited operations; the psychological effects, or in another aspect, the employee psychology, under the best conditions would require a sympathetic handling; in a hostile atmosphere they could be deplorable. Critically, the failure is not so much ethical or economic as intellectual; with such a set of assumptions even a wholly mechanical administration could be accompanied by the conviction of righteousness. What astonishes me is the anomaly of a magnificent engineering plant, machines and functions co-existing with a human engineering with so many apparent strains and frictions. But the negotiations throughout were carried on by both sides with frankness and good manners; both were desirous of avoiding futile recriminations and of setting themselves to the work of providing for the future protection of the best interests of the industry as a whole. It would therefore be a poor service to them to dwell further on these features. I can only trust that their real mutuality of interest in this enterprise is finally being sensed.

Certain actions which took place during the strike appeared to the public mind as extraordinary and I shall make a brief observation on them. Beyond doubt picketing was carried on in an illegal manner. The resistance to the preservation of plant property was from the standpoint of the strikers a supreme stupidity. The filling of the street alongside the plant with vehicles and the interference with innocent members of the public was an insolent flouting of civil order. But beyond doubt too, there was exasperation and provocation, and these actions seem to indicate the intensity of conviction on the part of the men that fair demands were being met only by stolid negativism. No one attempts to justify these actions, but a strike is not a tea party and when passions are deeply aroused civilized restraint go by the board unless the powers of order are summoned to vindicate them. Illegal action is for the civil authority to deal with. That authority must take the risk of temporizing with lawlessness. If broken heads are the only alternative to protection of members of the public, I do not understand that public safety must be abandoned.

These matters are indeed relevant to the question of union responsibility. There must be growth in these organizations as in all other groups as well as individuals and only experience can bring maturity of judgment and of conduct. An irresponsible labour organization has no claim to be clothed with authority over persons or interests. But I am dealing with a body recognized as the bargaining agent for approximately 9,500 employees, and while their abuse of striking power cannot be excused, much less justified, we cannot disregard the complex of hostile attitudes and resulting exasperations from which that abuse in fact arose. The protection which the law in general now affords against an irresponsible organization as a bargaining agent is the power in the employees to choose a new agent.

I have had an opportunity of sizing up the leadership of this union so far as it is represented by the Committee of Negotiation. The members are all of English-speaking origin and British citizenship. They have impressed me as being men of the stuff of which ordinary Canadians are made. With the exception of Messrs. Burt and MacLean who are on leave of absence from General Motors at Oshawa as international representatives of the union, they are men with seniority in the Ford Plant ranging from 10 to 18 years. They conducted themselves in negotiation with intelligence and reasonableness. I have no doubt their dominating interest is the job of those they represent in that industry and that their object is to attain for those employees and their families a secure and self-respecting living, which seems to be the object of most Canadians. That aim is legitimate, whether or not attainment is possible.

It has been suggested that the union officers, as other labour leaders, are primarily concerned with the maintenance of their positions and power and no doubt some of them have experienced stirrings of that nature. But union organization is admittedly necessary in the present set-up of our society and we cannot expect these men who have gifts of leadership—and it is by such leaders that movements against wrongs are initiated—to be quite free of those human frailties from which only a few saints escape. The only effective remedy for abuse of this nature is a greater democratization of the union.

It is intimated also that they are merely the instruments of a communistic group which seeks not the realization of private enterprise but its subversion. There may be such a group among the automobile workers in and about Windsor. There may be some degree of organization and leadership. But

the employees who would be susceptible to one-sided teachings of that sort would not in general have the remotest understanding of communist ideology and would grasp at its promise as an escape from what is vaguely felt to be a dictatorship of capital. I should say on principle that a leadership which is opposed to communistic ends and methods, as I think this is, should be supported in a democratic economy; it is the failure of that leadership that furnishes the opportunity for strengthening the position of its opponents. I have no doubt that in the situation of Windsor to-day a city so immediately exposed to the pressure of labour action in the United States, an unreasoning denial of some effective form of union security would throw the controversy into a cauldron of deepening animosities ruinous to the interests of men, industry and public. Nor is it sufficient to say that these men must recognize their responsibilities. Responsibilities are the correlatives of rights and where the latter are unreasonably denied it is somewhat of mockery to be told that you must discipline yourself to injustice in order to demonstrate your title to justice. I am aware of the difficulty of defining justice, but in this particular field we have come within sight of general standards according to which what the judgment of fair minded Canadians would call rough justice can be approximated.]

Union Security

Let me now apply these considerations to the case before me in relation to the claim to union security; other points of difference have arisen, but they are minor, they concern plant administration matters, and I will deal with them in a separate memorandum.

Union security is simply security in the maintenance of the strength and integrity of the union. Disruptive forces may come from the Company or from other competing labour organizations or simply from the lack of centripetal force within the employee body. But the first is now forbidden by law and the second is not in fact present: the negotiating union is unchallenged in the organization of workers of automobile and affiliated industries.

What is asked for is a union shop with a check-off. A union shop permits the employer to engage employees at large, but requires that within a stated time after engagement they join the union or be dismissed if they do not. This is to be distinguished from what is known as a "closed shop" in which only a member of the union can be originally employed, which in turn means that the union becomes the source from which labour is obtained.

The "check-off" is simply the act by the employer of deducting from wages the amount of union dues payable by an employee member. It may be revocable or irrevocable for a stated time and may or may not fix the amount of deduction. Where there is a closed or union shop, the check-off becomes less significant because of the fact that expulsion from the union requires dismissal from employment.

In addition to the foregoing of which there may be many modifications, there is what is known as "maintenance of membership" which is a requirement that an employee member of a union maintain that membership as a condition of his continuing employment for a stated time, generally the life of an agreement. In this also there can be many modifications.

Factors in the Decision

[Basing my judgment on principles which I think the large majority of Canadians accept, I am unable in the circumstances to award a union shop. It would subject the Company's interest in individual employees and their tenure of service to strife within the union and between them and the union which, with extraordinary consequences, in one instance has proved a serious matter for the Company concerned; and it would deny the individual Canadian the right to seek work and to work independently of personal association with any organized group. It would also expose him even in a generally disciplined organization to the danger of arbitrary action of individuals and place his economic life at the mercy of the threat as well as the action of power in an uncontrolled and here an unmatured group. It may be said that that is the danger to the individual in society, but while we must run the risk of the latter, certainly in some situations it is desirable to withhold the same power from smaller units. This points to a field within labour organization affecting the interest of the individual, the employer, and the public, which perhaps must be left for legislation. At least a code of these relations cannot be made a conditional annex to the determination of a limited point of dispute as I have it here.]

I should point out that the employer can by his consent subject his employees to the full force of the organized power of unionism, and in many groups in trades and employments in Canada that has taken place: e.g. printing trades including that work in many newspapers, longshoremen, theatrical and moving picture operators, hotel and restaurant employees, building workers, pulp and paper mill workers, miners, milk and dairy employees, seamen, and others. Some of these

trades are organized as exclusive crafts, but their power is recognized and strengthened whenever in a plant permanent or temporary employees are taken from their ranks. In these cases, the employer's interest in his personnel, except as to competency, is surrendered and the individual's right against the organization, except as a member of it, is destroyed. It may be of some interest that the Ford Motor Company in the United States with over 100,000 employees affected, has accepted the union shop and check-off in all of its production and assembly plants and units in that country.

[On the other hand, the employees as a whole become the beneficiaries of union action, and I doubt if any circumstance provokes more resentment in a plant than this sharing of the fruits of unionist work and courage by the non-member. It is irrelevant to try to measure benefits in a particular case; the protection of organized labour is premised as a necessary security to the body of employees. But the Company in this case admits that substantial benefits for the employees have been obtained by the union, some in negotiation and some over the opposition of the Company. It would not then as a general proposition be inequitable to require of all employees a contribution towards the expense of maintaining the administration of employee interests, of administering the law of their employment.]

What I am dealing with is employment in a mass production industry. The employees are co-ordinated with mechanical functions which in large measure require only semi-skilled operators. No long apprenticeship is necessary to acquire those skills; some operations can be taken on at once, and there is a general rise in complexity. But it is essentially the utilization of concentrated manpower in a framework of machines in which the initiative and artistry of the individual is either non-existent or becomes stereotyped. The large body of employees from their stature and their average skills are inescapably of a class that must be governed more or less in the mass and by mass techniques and one chief object of the plant law is to diffuse authority among the labour representatives to make administration as flexible as possible. But in such a body we cannot look for that generalized individuality in understanding and appreciation of the necessity for employee organization which craftsmen have tended to evolve. Their objectives and their conception of union function are much too simplified for that. With the aggravation of an annual lay-off, the result is that the union is subject to a periodic

disorganizing tendency. Then too, the union has little to offer the men except their plant law: there is less individual appeal of or opportunity for social activities or union benefit provisions than in other classes of labour. In these conditions, it is, in my opinion, essential to the larger concern of the industry that there be mass treatment in the relation of employees to that organization that is necessary to the primary protection of their interests.

[I consider it entirely equitable then that all employees should be required to shoulder their portion of the burden of expense for administering the law of their employment, the union contract; that they must take the burden along with the benefit.

The obligation to pay dues should tend to induce membership, and this in turn to promote that wider interest and control within the union which is the condition of progressive responsibility. If that should prove to be the case, the device employed will have justified itself. The union on its part will always have the spur to justify itself to the majority of the employees in the power of the latter to change their bargaining representatives.]

It may be argued that it is unjust to compel non-members of a union to contribute to funds over the expenditure of which they have no direct voice; and even that it is dangerous to place such money power in the control of an unregulated union. But the dues are only those which members are satisfied to pay for substantially the same benefits, and as any employee can join the union and still retain his independence in employment, I see no serious objection in this circumstance. The argument is really one for a weak union. Much more important to the employee will be the right which is being secured to him in the conditions to be attached to the check-off, to have a voice in that of which he is now a victim, the decision to strike. Whether the constitution of the union is sufficiently democratic in securing the powers of the members or such money power is dangerous are matters which concern the members and the public. The remedy lies essentially in the greater effectiveness of control in the members; but outside interference with that internal management is obviously a matter of policy for the legislature. Apart from the strengthening of the union on which I have made observations in these reasons, I see no special interest of the employer as such in these possible dangers and in the present state of things, those who control capital are scarcely in a position to complain of the power of money in the hands of labour.

The Company's suggestion was that in relation to the union shop the union should be left to its own resources until such time as legislation was passed placing controls and requirements on the constitution of unions, their accountability to members and the public and other features of their internal organization. But this assumes the exhaustion of the resources of private negotiation which I think unwarranted and in the actual circumstances and for the reasons I have given it would perpetuate a ruinous hostility in labour relations; and Mr. Aylesworth conceded that the scheme I am about to make effective went "quite" a way to meet his objections to a union shop.

Terms of Award

[My award is a check-off compulsory upon all employees who come within the unit to which the agreement applies. It shall continue during the period of the contract. The amount to be deducted shall be such sum as may from time to time be assessed by the union on its members according to its constitution, for general union purposes; it shall not extend to a special assessment or to an increment in an assessment which relates to special union benefits such as for instance union insurance, in which the non-member employee as such would not participate or the benefit of which he would not enjoy. The deduction shall be made only in the conditions and circumstances laid down by the constitution and by-laws of the Union, but it shall not include any entrance fee. At the end of each calendar month and prior to the 10th of the following month the Company shall remit by cheque the total of the deductions to the local union.]

This mechanism, from the orthodox standpoint, preserves the basic liberties of Company and employee which I have mentioned. The assessment affects only the employees; the employer is concerned only in the expense of the check-off and the strength which it may give to the union. But the expense can properly be taken as the employer's contribution toward making the union through its greater independence more effective in its disciplinary pressure even upon employees who are not members, an end which the Company admits to be desirable. I should perhaps add that I do not for a moment suggest that this is a device of general applicability. Its object is primarily to enable the union to function properly. In other cases it might defeat that object by lessening the necessity for self-development. In dealing with each labour situation we must pay regard to its special features and circumstances.

In addition to all other provisions in the agreement and subject to but except so far only as it or they may from time to time be affected by any law or any regulation having the force of law, which, from time to time, shall be read with these provisions, this obligatory check-off shall be subject to the following conditions:

1. No strike, general or partial, shall be called by the union before a vote by secret ballot supervised by an officer of the Department of Labour for Ontario appointed by the Minister of Labour for that province shall have been taken of all employees to whom the agreement applies and a majority voting have authorized the calling of a strike within two months from the balloting.

2. The union by one of its international officers or by two officers of the local, including the President, shall repudiate any strike or other concerted cessation of work whatsoever by any group or number of employees that has not been called by the union after being so authorized; and shall declare that any picket line set up in connection therewith is illegal and not binding on members of the union. The repudiation and declaration shall be communicated to the Company in writing within 72 hours after the cessation of work by the employees, or the forming of the picket line respectively.

3. In addition to any other action which the Company may hereunder or otherwise lawfully take, any employee participating in an unauthorized strike or other concerted cessation of work not called by the union shall be liable to a fine of \$3.00 a day for every day's absence from work and to loss of one year's seniority for every continuous absence for a calendar week or part thereof.

4. Should the union violate this provision for union security either by declaring a strike otherwise than with the authorization by ballot of the employees or by failing to repudiate or to declare as herein provided, it shall be liable to the penalty of a suspension of the check-off, in the case of any unauthorized strike by the union or an unauthorized general strike or concerted cessation of work by employees which it does not repudiate or of a picket line in connection therewith in respect of which it does not so declare, for not less than two and not exceeding six monthly deductions; and in the case of an unauthorized partial strike or cessation of work by employees, for failure to repudiate or declare, not less than one and not more than four monthly deductions; the suspension to be in the former case, next following the return to

work of the striking employees, and in the latter case, next following the violation. The penalty above the minimum shall be in the discretion of the Company, but the Company shall have regard to the seriousness and the flagrancy of the violation; the reasonableness of that discretion shall be a matter for the grievance procedure and shall be submitted direct to the umpire. The suspension shall be absolute in its effect on dues for each of the months of the suspension period, subject however, to the decision of the umpire on any appeal under this paragraph.

5. At any time after the expiration of ten months from the date of the agreement and from time to time thereafter but with not less than one year between ballotings, not less than 25 per cent of all employees to whom it applies may on application to the Minister of Labour for Ontario obtain a secret ballot to be supervised by an officer of the Department of Labour for Ontario designated by the Minister for the selection of a bargaining agent, but the union shall continue to be the bargaining agent of the employees until a new bargaining agent has been so selected by a majority of the employees.

6. The deduction on the records of the Company shall constitute the sums so deducted as money held by the Company in trust for the Local.

7. This provision for union security shall be enforced by the Company against each employee to whom the agreement applies as a condition of his continuance in or entrance into the Company's service.

8. Any employee shall have the right to become a member of the union by paying the entrance fee and complying with the constitution and by-laws of the union.

9. Except as otherwise specifically provided or dealt with, any dispute as to a violation of any condition or provision of this section shall be matter for the grievance procedure and shall be submitted direct to the umpire.

10. The Company, the Union, and the Local shall do all such acts and things as may be requisite or necessary to the observance and carrying out of this provision for union security according to the true intent and meaning hereof.

Dated at the City of Ottawa this 29th day of January, 1946.

I. C. RAND,
Arbitrator.

Award on Administrative Points

(The paragraph numbers refer to the clauses of the Collective Agreement)

25. (a) If management's decision is not satisfactory to the employee concerned, written notice of appeal signed by the employee may be served on the Personnel Manager within four regular working days of the delivery of the decision, appealing therefrom to an impartial umpire to be selected by the parties to the grievance or if such parties fail to select an umpire within five regular working days of the receipt by the Personnel Manager of the notice of appeal, then to an impartial umpire designated by the Minister of Labour for Ontario. The umpire so designated shall be a jurist of repute in that province. Each party shall have the right to object to one name proposed by the Minister. Except as herein otherwise expressly provided, the decision of the umpire shall be final and binding on the parties to the appeal.

(b) Except as otherwise expressly provided herein, the umpire shall not have jurisdiction to modify in any manner any discipline imposed on an employee or the Union in accordance with the terms of this agreement or the published rules and regulations of the Company; but the Union may at any time suggest to the Company that the penalty provided by any such rule or regulation is unreasonable; and if agreement cannot be reached thereon, the matter shall be a grievance hereunder and shall be submitted direct to the umpire; but the decision of the umpire shall not be binding on the Company. This shall not affect the determination by the umpire of the fact of such violation or any question of the interpretation of this agreement or of the said rules and regulations. But if it is specifically alleged that the penalty has not been imposed in good faith but has been influenced by improper or ulterior motives or by reasons other than the proper administration of discipline within the plant, the umpire shall hear the evidence offered in support; and if he finds the allegation to be true, he shall have jurisdiction, notwithstanding anything herein contained, to modify the penalty accordingly.

The expenses of the umpire, if any, shall be borne in equal shares by the Company and the Union, and the shares shall be paid direct to the umpire by each.

50. Notwithstanding their seniority status, stewards, in the event of a lay-off, shall be continued at work when not less than ten employees are working in their respective jurisdictions. In the case of overtime or extra work, stewards shall be continued at work when work of their classification is available

in their jurisdiction respectively which they are able and willing to do; and, in the case of overtime or extra work, in any event, when not less than 15 per cent of the employees within their respective jurisdictions are at work, with a minimum number in all cases of ten and a maximum percentage requirement of twenty-five.

51. Notwithstanding their seniority status, plant committee men and negotiating committee men who are employees of the Company shall be continued at work as long as work of their classification is available in the plant in which they are employed and which they are able and willing to do.

52. A person who has been a member of the armed forces of Canada including the Merchant Marine at any time since September 1, 1939, upon entering the service of the Company and subject to the conditions of the probationary period, shall be given an immediate seniority equal to the length of time he served in the forces and this constructive seniority shall be taken into account in his application for work; but this shall not entitle him on such entrance to displace a person then in the Company's employ, except where the former was at the time of his becoming a member of the forces a resident of Essex County, Ontario, and the latter was immediately before his employment by the Company a non-resident of that county. To obtain the benefit of this clause, the person applying shall do so within one year from his discharge from the forces and shall at such time present his discharge papers. There shall be attached to such papers a certificate by the Company showing the date when he was taken into the Company's service.

56. The president and the Financial Secretary-Treasurer of the Local and any international officer of the Union having jurisdiction exclusively in Canada, being employees of the Company, so long as offices held by them are full-time positions, shall be granted leave of absence by the Company and while on such leave of absence shall accumulate seniority.

57. If an employee be transferred from one department to another, he shall incur no loss of seniority; provided that an employee transferred at other than his own request, unless such transfer is the result of his failure satisfactorily to perform the work required of him, shall be the junior employee in the occupational group or department, as the case may be, who is able satisfactorily to perform the work required of him in the new department, and he shall be notified of an

opening occurring in his immediate former department within a period of six months from the date of his transfer and within 24 hours of such notification may elect to be retransferred to his immediate former department, subject to his being able satisfactorily to perform the work required of him. If the employee on being so notified does not elect to be so retransferred, he shall thereafter have no claim on his immediate former department.

77. (a) Subject to any provision of law or any regulation having the force of law, this agreement shall continue until March 31, 1947, and thereafter unless and until terminated as herein provided. The termination may be effected on March 31, 1947, or on September 30, 1947, or on such days in any year hereafter, in the following manner: Either party may give to the other two calendar months' notice of negotiation, setting forth all matters in respect of which it desires to amend this agreement. The parties will thereupon negotiate on such matters. If they do not agree thereon, the party giving the notice may, not later than the last week of the said period, give to the other a further notice of termination to take effect at the end of the month next following the period of negotiation, and on the expiration of that month this agreement shall come to an end. If no such further notice is given, this agreement shall continue in effect as if no notice of negotiation had been given, subject to any amendment the parties may have agreed to incorporate herein; upon the election at any time or from time to time by the employees of a new bargaining agent,

that agent shall be deemed to be substituted for the Union or other representative of the employees, as the case may be, as a party hereto as fully and to all intents and purposes as if it had been originally a party hereto.

79. The parties declare the desirability of a group medical, hospital and life insurance scheme for the benefit of the employees. If within six months from the date hereof the Company and the Local have not been able to agree upon such a scheme, the Local may at its own expense make provision for such benefits by an arrangement with an indemnity insurance company approved by the Minister of Labour for Ontario. The monthly premiums payable by the employees shall, upon the written authority of every such employee, be deducted each month from the payroll of the Company at its expense and the total sum in accordance with the direction of the Local remitted to the indemnity company with which the Local has contracted. The authorization to deduct shall make provision for cases in which the money payable to the employee in any month is not sufficient to enable the Company to make the necessary deduction.

80. Subject to any law or any regulation having the force of law, scales of wages and classifications may be the subject of a supplementary agreement, and unless otherwise provided therein the umpire hereunder shall have no jurisdiction in relation to such scales and classifications: but this shall not affect his jurisdiction over the matter of the application of such classifications as may from time to time be in effect to any employee.

Notes of Current Interest

Canada to ratify two International Labour Conventions

Resolutions have been approved by both Houses of Parliament looking to ratification by Canada of two Conventions of the International Labour Organization. These Conventions, which deal with the protection of longshoremen against accidents (No. 32) and the provision of statistics of wages and hours of work (No. 63), were adopted by the General Conference of the I.L.O. in 1932 and 1938 respectively. (See elsewhere in this issue, p. 205.)

The first imposes upon nations which have ratified it the obligation to ensure that certain standards of safety are maintained in regard to the loading and unloading of ships. It gives specific detail as to what standards are required in the tackle and gear, safe working load, safety appliances, and other matters affecting working conditions. It requires further that provision be made for the posting of safety regulations at docks, and for an efficient system of inspection to ensure compliance with the regulations.

Member states of the I.L.O. which ratify the second Convention are thereby required to compile statistics of wages and hours of work in a prescribed form, to publish the data compiled at regular intervals, and to communicate it to the International Labour Office.

Canada has now ratified 11 of the 67 Conventions which have been adopted by the I.L.O. Like other federal countries, she is con-

fronted with constitutional difficulties in adopting legislation to give effect to the provisions of many of the I.L.O. proposals. Those which are found to fall within provincial jurisdiction are brought to the attention of the provincial authorities, but none of them has been applied by all the provinces to date, although examination of provincial laws has shown that the requirements of some are met in whole or in part by existing legislation.

Of the eleven Conventions ratified by Canada, three remain inoperative, since the Judicial Committee of the Privy Council in London has ruled that the three Acts passed by the Dominion Parliament to make them effective were outside its competence.

Canada has been a member of the International Labour Organization since it was created in 1919, and has been represented by tripartite delegations at the twenty-seven sessions of the General Conference of the Organization that have been held during that time.

Permit system for employment of technical personnel abandoned

The Wartime Bureau of Technical Personnel has announced the abandonment of the permit system, which had applied to the engagement of technical personnel since March 23, 1942, and the substitution of a system of recording vacancies and engagements.

This change was outlined in a special notice appearing in the daily press throughout Canada

on December 28, 1945, giving the following explanation of the remaining minimum requirements:—

- (1) Employers are required to notify the Bureau of all vacancies in their establishments for technical personnel.
- (2) Employers are required to notify the Bureau within three days of the engagement of a technical person.
- (3) Employer and employee are required to notify the Bureau of cessation of employment.

As long as there was in existence the requirement that the engagement of a technical person was subject to approval of the Minister of Labour (through the Bureau) before the services of the technical person could be used, certain factors necessarily had to be subjected to scrutiny before action could be taken on an application for a permit. The principal considerations involved were the priority of the proposed work and the availability of the proposed employee. The need for applying for such permits now having disappeared, such matters as priority and availability are naturally not brought under any scrutiny. In other words, the engagement of technical personnel is not subject to manpower control in any way whatever.

"The need for recording movements of technical persons, however, obviously still exists," it was explained. "Only by having a reasonably accurate picture of such movements, with related data as to supply and demand, can the Department of Labour intelligently render assistance not only in the immediate employment problems of both employers and individuals, but also in the planning and organizing of employment as a service to employers, to individual technical persons, to professional bodies, and to universities. To this end, the regulations as now administered require the recording of needs and engagements by employers and the recording of cessations of employment, both by employers and employees. There is every reason to believe that full co-operation can be expected in this regard from those concerned.

"To sum up on the question of employment, the actual business of engaging a technical person, or of leaving or entering employment, is no longer subject to scrutiny or approval but those concerned are expected to co-operate to the extent of providing notification of such movements after the necessary arrangements have been made.

"At the same time, the Bureau is enabled to increase its efforts along the lines of a simple employment service for technical persons. The practice of referring the records of suitably qualified people to employers who register

their needs with the Bureau is being continued and technical persons who are seeking employment are being assisted in every way possible to find a suitable connection. This applies particularly to those who are leaving the armed forces to return to civil life and to those who have served in war industry and whose employment is being terminated due to cessation of war production."

Controller withdrawn from American Can Company

Withdrawal of the Controller appointed some months ago by the Government to manage the affairs of the American Can Company at Vancouver, was announced recently by the Honourable Humphrey Mitchell, Minister of Labour. Control and management of all Company property and assets were returned to the American Can Company, effective January 18, 1946, by a recent Order in Council.

In view of the threatened serious loss of food if a supply of tin cans were not available, the Dominion Government had moved to reopen the then strike-bound Vancouver plant of the American Can Company, through the appointment in August last of a Controller to manage the Company's affairs pending settlement of the dispute then in progress. Gordon Bell of Vancouver was appointed as Controller from August 9, 1945 (L.G., Oct., 1945, p. 1504).

Employment and industrial statistics

Statistics reflecting industrial conditions in Canada are summarized in the table on page 135. An increase of 1.0 per cent in industrial employment brought the index to 172.9 at the beginning of December, 1945. This was accompanied by an increase of 0.1 per cent in the weekly salaries and wages disbursed at the same date as compared with the aggregate payroll reported to the Dominion Bureau of Statistics one month earlier. The index of wholesale prices was fractionally higher for December than for the previous month. The Bureau's cost of living index receded slightly in December, standing at 119.9 at January 2, 1946. Curtailment of industrial production during December was more than offset by increased volume in the distribution of goods with the result that the index of the physical volume of business rose from 189.9 in November to 193.0 in December.

Employment and earnings—The index of industrial employment advanced to 172.9 at December 1. It was 171.2 one month earlier and 185.7 at December 1, 1944. An increase in employment at December 1 is contra-seasonal according to pre-war experience but

STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

NOTE.—Official statistics except where noted. Much of the statistical data in this table, with an analysis, are included in the *Monthly Review of Business Statistics* issued by the Dominion Bureau of Statistics.

⁵ Adjusted, where

necessary, for seasonal variation.

⁶ Notes in the hands of the public at the end of the month.

⁷ Figures for four weeks

ended January 26, 1946, and corresponding previous periods.

is in conformity with the trend which has been upward at the beginning of December since 1941. The greatest increase in employment during the month was in logging which provided work for an additional 13,892 persons, and in trade in which the advance of 10,567 was also above the December 1 average. Activity in manufacturing continued to decline, the largest reductions being in iron and steel plants from which nearly 11,400 men and women were laid off. Employment generally at December 1 was lower by 6.9 per cent than at the beginning of December, 1944; during the same period the index number of payrolls fell 8.4 per cent.

The 15,577 employers reporting to the Bureau showed a total working force of 1,768,635 at December 1. The aggregate weekly payroll increased by 0.1 per cent from the previous month to total \$55,962,031 at December 1. At the same time the per capita weekly earnings showed a seasonal drop, with the average at December 1 amounting to \$31.64 as compared with \$31.95 at November 1. Earnings at December 1 averaged \$32.19 in 1944; \$31.61 in 1943; \$30.06 in 1942 and \$27.32 in 1941.

Prices—The general index number of wholesale commodity prices (base 1926=100) rose to 103.3 in December, 1945, from 103.1 in November and 102.5 in December, 1944. Three of the sub-group indexes showed increases, vegetable products rising from 96.6 to 97.0, iron products from 115.1 to 115.2, and non-metallic minerals from 101.4 to 101.7. The index for animal products declined from 109.8 to 108.9, and chemical products from 98.9 to 98.8. The index numbers for textiles at 91.8, wood products at 117.6 and non-ferrous metals at 81.6 were unchanged from the November recording.

The Dominion Bureau of Statistics cost of living index (base 1935-39=100) declined fractionally from 120.1 on December 1, 1945, to 119.9 on January 2, 1946. The food index fell from 134.3 to 132.8, with a sharp decline in egg prices outweighing lesser increases for butter and fresh vegetables. Other groups remained unchanged with the exception of clothing which edged upward from 122.5 to 122.6, and miscellaneous items which rose from 109.6 to 110.9. Results of an annual survey of health maintenance costs showed costs in this group to be generally higher. A similar review of life insurance rates recorded small increases in certain types of policies. Other group indexes held unchanged as follows: rents 112.3, fuel and light 107.1, home furnishings and services 119.5. The wartime increase in the cost of living index was 18.9 per cent.

Index of the physical volume of business—An advance in the index of the physical volume of business from 189.9 in November to 193.0 in December reversed the downward trend of the last two years. This was due mainly to greater activity in the distribution of goods during the last month of 1945. The general index of distribution, covering railway traffic, commodity distribution, and external trade, recorded an increase of more than 9 per cent. The tonnage of freight carried by the steam railways was heavier in December than in any month subsequent to August. Retail and wholesale sales were markedly higher in November, the latest month for which statistics are available. An adjusted index of imports rose from 158.8 to 170.0 while the index of exports advanced from 218.2 to 232.8. Increases were shown in the production of electric power and in new business obtained by the construction industry. The indexes of mineral production and of manufacturing recorded considerable declines, however, with the result that the index of industrial production dropped from 197.7 in November to 194.5 in the last month of the year.

During the first 11 months of 1945, the index of the physical volume of business was 9.7 per cent lower than for the corresponding period in 1944. In the same comparison, the index of industrial production was 13.5 per cent lower, mineral production 29.8 per cent, manufacturing production 13.8 per cent and the consumption of firm power 9.6 per cent lower. A decrease of 34.7 per cent in hog slaughterings was offset by an increase of 30.8 per cent in cattle slaughterings. Factory cheese production increased by 2.2 per cent while butter production declined 1.1 per cent. There was a decline of 10.2 per cent in the value of imports and 5.7 per cent in the value of exports. The value of construction contracts awarded during the eleven-month period was 37.2 per cent higher than during the corresponding months in 1944. Contracts awarded during 1945 amounted to \$409 million against \$292 million in the preceding year.

Dominion proposals to provinces revised	A third meeting of the Co-ordinating Committee of the Dominion-Provincial Conference was held in Ottawa between January 28 and February 1.
------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------

The proposals of the Dominion Government, made at the opening session of the Conference (L.G., Sept., 1945, p. 1280) were discussed by the Committee. Revisions were made, and further revisions are under consideration.

Prior to the session, four of the provinces submitted briefs containing their replies to the original proposals of the Dominion. These

provinces were Ontario, Saskatchewan, Nova Scotia and New Brunswick.

At the conclusion of the meeting, the secretary of the Committee, Mr. Alex Skelton, issued the following statement:—

"The Co-ordinating Committee of the Dominion-Provincial Conference met Monday, January 28, and has met twice daily since Monday.

"As a result of the discussions which have taken place in the economic committee and the co-ordinating committee the Dominion revised its proposals of August last in some important respects. The revised proposals were discussed at length and further revisions are under consideration.

"It was agreed that substantial progress has been made. The committee adjourned its proceedings until April 25."

The meeting was attended by the nine provincial premiers and by the Rt. Hon. W. L. Mackenzie King, Prime Minister of Canada, accompanied by Rt. Hon. J. L. Hiesley, Minister of Finance, Rt. Hon. Louis S. St. Laurent, Minister of Justice, Hon. C. D. Howe, Minister of Reconstruction and Supply, Hon. Brooke Claxton, Minister of National Health and Welfare, and Hon. J. J. McCann, Minister of National Revenue.

Labour-management production committees in Canada

The Industrial Production Co-operation Board had record of 387 labour-management production committees established in Canada as of December 31, 1945. This Board is the agency through which the Canadian Government is encouraging and promoting the formation of labour-management committees as a means of improving production and inducing closer labour-management relations. (L.G. Dec., 1944, p. 1464).

Meeting of Eastern Ontario Steelworkers

A one-day conference of the Council of the Eastern Ontario Area, United Steelworkers of America was held in Smiths Falls on January 13. Delegates were present from several of the local unions in the area and Robert Black, President of Local Union 343, Kingston, was chairman of the meeting.

One resolution passed by the conference requested the Minister of Finance to grant exemption from income tax to single persons earning less than \$1,000 and married persons earning less than \$2,500 per year. Another resolution asked the government to urge upon industry full production with a view to providing the maximum number of jobs for veterans. Still another resolution was

passed unanimously calling upon the government and Legislative Assembly of Ontario to increase Workmen's Compensation benefits to 75 per cent of the employees' earnings.

Brief addresses were delivered by John Mitchell, Director of the United Steelworkers of America, and Don R. Montgomery, International Representative of the United Steelworkers.

Organization of Council for Youth Guidance and Placement in Ottawa

A Council for Youth Guidance and Placement in Ottawa was created on January 14 at a meeting of various organizations held University.

This Council, the first of its kind in Canada, aims at wider co-operation between educational guidance given by schools, and occupational guidance and placement of youth, which have become an important function of the National Employment Service. It was organized to exchange information between the various youth-serving organizations and the National Employment Service.

Veteran-labour council in Victoria

A joint veteran-labour consultative council has been in operation in Victoria for about two years, consisting of three representatives each from the Canadian Legion, the Victoria Labour Council (C.C.L.), and the Victoria and District Trades and Labour Council (T.L.C.).

At the original meeting of the council the principle was laid down that the representatives of labour and veterans would work co-operatively. Their main objective was to eliminate the possibility of friction between the two classes in a campaign for jobs and to work harmoniously towards a goal of jobs for all. The council would discuss problems, with each group putting forward its ideas with a view to assisting solution of difficulties.

Since its inception the joint council has operated under the chairmanship of Carl Fallas, veterans' delegate, with H. E. Thayer, President, Local 456, International Association of Machinists, as secretary.

Meetings are held once a month and matters of common interest are discussed. Occasionally subcommittees are appointed to study specific subjects. The result of the deliberations is to make the council a clearing house for ideas on different matters, to reconcile two sets of opinion and to give them publicity.

Recommendations have been advanced to both provincial and federal bodies by the council which, according to Mr. Fallas, considers matters related to housing and full employment of cardinal importance.

On the housing issue, the council favoured creation of low rental units rather than the construction of homes for purchase, the opinion being that a veteran should be afforded some shelter while he looked around and determined what he would do before spending his savings on a permanent domicile.

Safety in building

"Safety in Building", a mimeographed pamphlet containing the text of the Convention and four

Recommendations concerning safety provisions in the building industry which were approved by the International Labour Conference in 1937, was issued recently by the Department of Labour. The subjects covered included provisions for inspection, safety equipment and first-aid, co-operation in accident prevention and vocational education, as well as the construction of scaffolds of different kinds, working platforms, gangways, runs and stairways, the construction and maintenance of hoisting appliances, ladders, the fencing of openings, roof work and others. Copies may be obtained by applying to the Legislation Branch, Department of Labour, Ottawa.

Industrial disputes in United States

A series of important industrial disputes developed in the United States late in 1945 and early in 1946.

Originating in the demands of workers for increased wage rates to compensate for the decline in take-home pay resulting from the post-war decrease in working hours and loss of overtime pay (L.G., Nov., 1945, p. 1624), the disputes led to strikes in certain instances.

Wage disputes in the automobile industry culminated in a strike at the General Motors Corporation on November 21, when some 350,000 employees in more than 100 plants throughout the country, members of the United Automobile Workers (CIO), stopped work in support of their demand for a wage increase of 30 per cent. Linking this demand with the maintenance of price control, the union stated that such a wage increase would be unacceptable if used as a basis for raising prices. It asserted, however, that if General Motors would permit access to its books and issue proof that it could not absorb a 30 per cent wage increase without raising prices, the union would lower its demand. Rejecting this proposal, the company took the position that "ability to pay" should not be considered as a factor in determining the amount of a wage increase. It offered an increase of 10 per cent.

When attempts at conciliation proved unsuccessful in this dispute, President Truman appointed a fact-finding board. On January 10

the Board issued its report, recommending a wage increase of 17.4 per cent, or 19.5 cents an hour, and stating the belief that the company could pay this increase without raising prices. This recommendation was rejected by the company, although the union expressed its willingness to accept it, and the strike was still in process in mid-February.

Wage disputes in other sections of the automobile industry were settled without strikes. The United Automobile Workers reached agreement with the Kaiser-Frazer Corporation on January 7 and with the Ford Motor Company and the Chrysler Corporation a fortnight later. Agreements were subsequently effected with a number of other motor companies, the average settlement being for a wage increase of 15 to 16 per cent.

In the steel industry, the failure of workers and management to come to an agreement on wages resulted in a strike of some 750,000 workers, members of the United Steelworkers (CIO). The strike began on January 20 after the steel companies through their spokesman, Benjamin Fairless, president of the United States Steel Corporation, had rejected a compromise proposal made by President Truman. The President's suggestion for an increase of 18½ cents per hour was accepted by the union but the steel companies, with the exception of a few of the smaller establishments, decided to adhere to an earlier offer of 15 cents.

Closely related to the wage question in this dispute was an application by the companies to the Office of Price Administration for an increase in the price of steel. The companies were stated to be asking for a price increase of \$7 per ton, whereas the OPA was reported as unwilling to grant more than \$2.50. The size of the increase was expected to affect consideration of prices of products manufactured from steel. Meanwhile the interruption in production was causing curtailment of operations in a number of industries in both the United States and Canada.

Other large strikes for wage increases occurred in the meat packing, electrical products, oil, glass, and communications industries.

U.K. farm workers' hours reduced, wage claim rejected

Under the Agricultural Wages (Regulation) Acts, 1924 and 1940, and the Defence Regulations, the Agricultural Wages Board for England and Wales has reduced from an average of 50 to 48 the weekly working hours for which the minimum wage of farm workers is payable. Other changes include the raising of overtime rates to time and a quarter on week days and time and a

half on week-ends, an increase from 48s. to 50s. in the weekly wage paid to women, and an increase from four to six in the number of paid holidays in a year for all farm workers. The application of the male workers for an increase in the national minimum wage from 70s to 90s. a week was rejected.

The machinery for regulating wages and hours of agricultural workers was described in the *LABOUR GAZETTE*, May, 1945, p. 613.

**Business training
for demobilized
personnel in
United Kingdom**

The United Kingdom's Ministry of Labour has announced the details of a scheme, to provide three months' training in business administration for demobil-

ized men and women, whose careers were interrupted by the war. The scheme is to commence at technical and commercial colleges throughout the United Kingdom in April.

Trainees must normally have served at least one year in the Forces, the Merchant Navy, civil defence or the coal mines and must prove that war service prevented the commencement of a career or the training for a career. Alternatively, they must prove that their business career was interrupted by war service before the age of twenty-one or before the completion of two years in business. They must have reached the standard of a school-leaving certificate before the call up unless war services showed them to have exceptional administrative abilities. Trainees will, if necessary, receive financial assistance for maintenance during the course—up to a maximum of £160 a year for a single person or £270 for a married man with a further £40 for each child. There is no upper age limit, though in general it is expected that the scheme will apply to men up to twenty-nine. Those who have taken the general course may be selected to proceed to a specialized business course of up to two years, related to one particular section of industry or commerce. Specialized courses may be run by individual firms.

The purpose of the scheme is to make up the loss of training and progress in business management caused through war service and to ensure that the qualities of leadership, enterprise and loyalty developed during the war are not lost to British industry and commerce. The Ministry of Labour expects up to twenty thousand applicants. The scheme has the enthusiastic support of British business men, over one hundred of whom have

already volunteered free services as instructors. No final acceptance or allocation of places will be made until March, so as not to handicap the men or women serving overseas.

**Formation
of Labour
Foundation in
Netherlands**

Formation of an employer-worker organization known as the Labour Foundation was announced in the Netherlands factories shortly after liberation.

The Foundation was planned by leaders in the wage-earner, agricultural, large-business and small-business groups during the German occupation. Its purpose is to foster the return of normal relations between workers and employers and to maintain or restore order in industrial life.

Thereafter the Foundation will work toward a lasting and well-balanced social economy in the Netherlands, based on co-operation between workers and employers.

To achieve these aims, the Foundation will (a) promote measures for raising the social and cultural standard of Netherlands workers; (b) further continued consultation between employers, and workers' organizations in the interests of industrial peace; (c) serve employer and worker organizations and governmental departments in an advisory capacity; (d) work for the issuance of regulations—binding on employers and workers who through their organizations are members of the Foundation—to govern wages, hours, and other labour conditions, the hiring and dismissal of personnel, the settlement of differences arising in connection with piecework, and social insurance.

The organization of the Foundation also provides for joint consultation in so-called "trade councils," between workers and employers in the various branches of industry, as well as nationally and centrally in the management of the Foundation itself.

The Labour Foundation differs from the former Netherlands High Council for Labour, which was a Government organization instituted by Government leaders, and which served as a centre for the discussion of labour disputes. The Netherlands High Council for Labour served mainly to give advice when a new legislative measure was considered which would affect industry or labour; the Labour Foundation plans to aid workers, employers, and Government officials, continuously.

Relaxation of Price and Wage Control

Anti-Inflation Policy in the Transition Period

A RELAXATION of Canada's economic controls was announced on January 31, with the lifting of price ceilings from some 300 items, and amendments to the wartime wage and salary control orders.

The principal changes were as follows:

1. Suspension of price control, effective February 1, from a list of goods which are not considered to be necessities of life, and which are considered to be in good enough supply so that unreasonable price increases will not develop.

2. Amendment to the Wartime Wages Control Order, effective February 15. War Labour Boards dealing with applications for wage adjustments may now be guided by comparing wages in one plant or industry with other comparable plants or industries rather than by the former standard of gross inequalities and

injustices. Boards may also authorize an employer to vary wage rates on a basis which is otherwise "reasonable in the circumstances" and which is "consistent with maintenance of existing prices of goods and services".

3. Restoration to employees and employers of freedom to bargain collectively on questions of vacations with pay, off-shift differentials, hospital aid plans, annuities, pension plans and group insurance plans. Effective June 15.

4. Return to the provinces, effective June 30, of normal jurisdiction in the matter of minimum wage rates, hours of work, and vacations with pay.

5. Amendment to the Wartime Salaries Order to permit increases in salaries regarded as unduly low having regard to the rates paid for substantially similar services in the same or other businesses. Effective immediately.

Statement by the Prime Minister

In announcing the various changes, the Prime Minister, Rt. Hon. W. L. Mackenzie King, issued a statement outlining Government policy on price and wage control in the transition period.

He declared that Canada had pioneered in the field of anti-inflation control, and said that because the people of Canada had wholeheartedly supported the stabilization program, a sharp rise in prices had been prevented. "Orderly economic conditions have been maintained through six years of the most destructive war in the history of mankind. The anti-inflation program has succeeded beyond the most optimistic hopes expressed at the time of its introduction. Canada's record compares more than favourably with that of any other country in the world. In consequence, Canada faces the problems and readjustments of the post-war period in a relatively strong economic position. We have escaped so far the legacy of disruption and discontent which would have been the consequence of inflation. . . .

"Five months have passed since final victory. Reconversion has made substantial progress. Nevertheless we still face conditions of possible inflation which, if not controlled, would unquestionably lead to startling increases in costs and prices, and in the general cost of living. It takes considerable time to change over a productive system from a war basis to a peacetime basis. It takes time for labour

and machinery formerly engaged in the armed services and in war industry to produce additional food, housing, automobiles, and so on, in sufficient amounts to meet the high volume of current and accumulated demands. This is true even in countries like Canada and the United States where physical destruction and disorganization have not occurred.

"Inflationary conditions are also a direct consequence of the world-wide shortages of necessities of life such as food, clothing, lumber and other building materials. World-wide shortages have resulted in soaring prices abroad. They have increased the urgent and pressing demands of overseas countries on Canadian supplies.

Continuing Need for Stabilization Program

"In these circumstances, continuing need for a stabilization program remains clear. The disaster of soaring prices and living costs must be prevented not only because of the injustices and suffering that would result therefrom but because it would arrest progress toward a healthy peacetime economy. Inflation would lay the basis for a severe depression. It would promote industrial strife and social conflict. The preservation of the stable price and cost structure, which we happily possess to-day, provides a sound basis for expanding peacetime markets both at home and abroad.

"There can be no question of abandoning the stabilization program at this juncture. There must, however, be a clear recognition that the conditions in which it operates are substantially different from those prevailing during actual hostilities. The stabilization controls which are still retained are, apart from fiscal measures, of an emergency character designed to deal with emergency conditions arising from the war. They are in no sense a permanent feature of the Dominion Government's activities. Nor is there any need for their indefinite continuance. It is the Government's declared intention to remove such controls at the earliest moment consistent with the prevention of inflation and the maintenance of a fair division of essential goods in short supply. This explains why the Government requested from Parliament the extension of its war emergency powers for the limited period of approximately one year. The emphasis is on the removal of emergency controls and on continuous examination of the need for those which are retained. . . .

Requirements of Transition Period

"The advent of peace has substantially changed the economic environment in which the stabilization program operates. In wartime, Government expenditures practically assured maximum production and employment. Business risks and the risks of unemployment were almost eliminated. Price control could be, and in fact had to be fairly rigid. Price ceilings did not restrict imports or lead to excessive exports. External purchases and sales were controlled directly and were frequently the subject of inter-governmental contracts. Wage and salary controls were essential to the maintenance of effective price control. They were accepted with understanding and co-operation.

"With the disappearance of war production and the consequent decline in Government spending, an expansion in civilian production and investment is being looked to in order to provide the bulk of employment. To provide jobs, there must be an incentive to permit business, large or small, to take the risks involved in expanding operations and in entering on new lines of activity. Recent reductions in taxation, particularly in the excess profit tax, are a major step in this direction. The continued high level of demand, and the accumulation of deferred needs, combined with the relatively low level of Canadian costs, provide a favourable environment for such expansion. The reduction and removal of excise taxes has provided more leeway for the manufacturers of many 'reconversion' goods. The administration of price control must at the same time, necessarily be

more flexible than it was in wartime. Wage and salary control should be continued only to the degree essential in combating inflation."

Relation to Employment Policy

The Prime Minister declared that the first object of economic policy is a high level of employment and income. "Nothing," he said, "would restrict a lasting increase in production and employment more than a sharp rise in prices which would cut demand down to the present restricted level of supply. To curtail demand, which is precisely what soaring prices would do, would be to reduce prospective markets and employment opportunities. The present gap between demand and supply must be bridged to the largest feasible extent by increasing supply, by producing more and more, rather than by restricting demand through high prices.

"The one satisfactory answer to the danger of inflation is more and more production. Given co-operation and support by the Canadian people, anti-inflation controls will keep prices in check while production, at home and abroad, is catching up with demand.

"The Government's policy," he continued, "— one of gradual and carefully controlled readjustment—will permit price increases only when they are needed. As time goes on, it may not rule out some gradual and moderate increase in wages and salaries, in the price level, and in the cost of living. It is no longer feasible to attempt rigid maintenance of the price level. It is quite conceivable that by the time full 'decontrol' is achieved, the level of Canadian prices may be moderately higher than is the case to-day.

"There is a great deal of difference between a gradual and planned policy of adjustment to post-war conditions, which may involve some modest increase in prices; and a policy of rapid removal of anti-inflation controls. The objective of the Government's policy is to continue to protect the people of Canada from a sharp upswing in prices and living costs, and from the inevitable aftermath of deflation, unemployment and distress. Its purpose is to protect the value of wages and wartime savings. It is aimed to help to open larger markets both at home and abroad, and thus hasten progress toward the high level of peacetime production and employment which is our leading economic objective. With the intelligent support of the Canadian people Canada's anti-inflation program will achieve its aim. It will bring our country through the most destructive war in history and its aftermath without the economic and social disruption which have been the sorry heritage of past conflicts."

Changes in Wage Control

Adjustments in the Wartime Wages Control Order (P.C. 9384, December 9, 1943) are made by Order in Council P.C. 348 of January 31, 1946.

Order in Council P.C. 9354 had authorized War Labour Boards to approve an increase in wage rates only where a gross inequality or a gross injustice could be shown.

When the Order came into force the Government declared as its policy that it would take all practical measures to stabilize living costs at the level existing in December, 1943, and announced that the whole stabilization program would be reviewed if an increase of more than 3 per cent occurred. Since that time the cost of living index has risen by less than 1 per cent.

The new Order is announced as the first step towards the ultimate removal of wage control.

War Labour Boards will now be guided by comparing wages in one plant or industry with other comparable plants or industries rather than by the former more rigid standard of gross inequalities and injustices. The Boards may also authorize an employer to vary wage rates on a basis which is otherwise reasonable in the circumstances, and which is consistent with maintenance of existing prices of goods and services.

The Prime Minister declared that wage increases granted under the Order would not be recognized as grounds for price advances. "If such were permitted," he said, "it would simply invite a series of price increases in line with every advance in wage rates—a process which would set the inflationary spiral in motion."

In the words of the amending Order, a Board may now

authorize or direct an employer to increase a single rate or the rates of a range established by him under this Order or by or pursuant to a direction of the National Board for an occupational classification of his employees if and to the extent that the National Board finds that such rate or rates are low in comparison with the rate or rates generally prevailing for the same or comparable occupational classifications in the same locality, or if there is no such occupational classification in that locality, then for the same or comparable occupational classification in a locality which, in the opinion of the Board, is comparable; or may authorize an employer to vary a single rate or the rates of a range on such other basis and to such extent as in the opinion of the National Board is reasonable in the circumstances and consistent with the maintenance of existing prices of the goods and services which the employer sells.

The new Order also permits free collective bargaining over vacations with pay, off-shift differentials, hospital aid plans, annuities, pension plans, and group insurance plans.

It furthermore provides for the return of jurisdiction over minimum wage rates, hours of work and vacations with pay to the provinces, effective June 30.

Statement of Minister of Labour

In announcing details of the amendments, the Honourable Humphrey Mitchell, Minister of Labour, declared:

"The economic stabilization measures, by permitting an earlier and easier changeover from war to peacetime production, have protected the purchasing power of Canadian incomes whether they originate as old age and retirement pensions, children's allowances, veterans' pensions and allowances, mothers' allowances, workmen's compensation payments, or wages. In effect, the policy has been, and will continue to be, to protect the real value of all sources of income.

"Nevertheless, the War Labour Boards, composed equally of employee and employer representatives, have provided a means for review and revision of inconsistent wage rates within an industry, and notwithstanding limitations on wage rate revisions necessary to the stabilization policy, wage rates have, on the average, increased considerably more than the increase in the cost of living during the same period.

"The cost of living bonuses payable under earlier wage orders and incorporated in existing wage rates in 1943, are part of this general wage increase.

"The Government nevertheless recognizes the desirability of lifting all emergency economic controls as quickly as possible. Naturally it is not to be expected that the pressures that make for inflation, developed during five years of war, would be dissipated in a period of a few months, and, in fact, inflation pressures are still strong.

"However, the Government now believes that it is possible to make a number of amendments in the Wage Control Order as a first step towards the orderly return to the normal processes of collective bargaining and provincial jurisdiction over wage matters. The success of the stabilization program has been due to the co-operation given by the provinces and employees and employers under the Dominion regulations. The amendments give added flexibility in the adjustment of wage rates and working conditions, both of which are important. . . .

"Knowing as they do the ultimate benefit which both wage-earners and employers, and their respective organizations, will derive from their continued support of the economic

stabilization policy, I am confident that during the important transition period of the next few months, they will lend their support to these new developments."

Text of Amendment

This new Order, P.C. 348, makes the following changes in Order in Council P.C. 9384:

1. Section fourteen is amended by striking out paragraph (c) thereof and substituting the following:

"(c) to make provision for orderly rectification of wage rates which are low in comparison with the rates generally prevailing for the same or comparable occupational classifications in the same or comparable localities or which are otherwise not reasonable in the circumstances, insofar as this is possible consistent with the paramount principle of the maintenance of stability in prices,"

2. Section twenty is amended by striking out paragraphs (a) and (b) and substituting the following therefor:

"(a) authorize or direct an employer to increase a single rate or the rates of a range established by him under this Order or by or pursuant to a direction of the National Board for an occupational classification of his employees if and to the extent that the National Board finds that such rate or rates are low in comparison with the rate or rates generally prevailing for the same or comparable occupational classifications in the same locality, or if there is no such occupational classification in that locality, then for the same or comparable occupational classification in a locality which, in the opinion of the Board, is comparable; or may authorize an employer to vary a single rate or the rates of a range

on such other basis and to such extent as in the opinion of the National Board is reasonable in the circumstances and consistent with the maintenance of existing prices of the goods and services which the employer sells."

3. Section twenty-three is amended by renumbering the same as subsection one of section twenty-three and by adding the following as subsection (2):

"(2) Notwithstanding anything contained in this Order on and after June 30, 1946, it shall not be necessary for an employer to obtain a direction from the National Board

(a) to increase a wage rate paid by him to an employee in an occupational classification to the minimum wage rate established for the occupational classification of such employee at any time after November 15, 1941, by or pursuant to powers conferred by provincial minimum wage legislation;

(b) to comply with the provisions of any provincial legislation concerning hours of work or vacations with pay."

4. Section twenty-five is amended by renumbering the same as subsection one of section twenty-five and adding the following as paragraph (c):

"(c) pursuant to an agreement with his employees or their representatives, from establishing or altering a term of employment concerning vacations with pay, off-shift differentials, hospital aid plans, annuities, pension plans or group insurance plans."

and by adding the following as subsection two:

"(2) A change in conditions of employment made by an employer pursuant to paragraph (c) of subsection one of this Section shall not be deemed to constitute grounds in support of an application to any other agency of government for permission to increase the maximum prices of his goods or services."

Suspension of Price Ceilings

Following the statement of the Prime Minister respecting price, wage and salary control policy, the Right Hon. J. L. Ilsley, Minister of Finance announced the list of goods and services on which the price ceiling has been suspended effective February 1, 1946.

The Minister urged that this initial step in price de-control should not become the signal for numerous price advances. He stated that the Wartime Prices and Trade Board had conducted a survey during the previous week in the principal cities across Canada to determine the actual selling prices at retail of a wide variety of goods, including those being suspended from the ceiling. Further surveys of this nature will be conducted so that the Board will be aware of price changes at the retail level.

The Minister made it quite clear that the Board would not hesitate to re-impose ceilings if any unreasonable price advances occurred. Speculation or the withholding of goods from

the market would result in the Board exercising its powers of requisition at former ceiling prices.

The Minister did not rule out the possibility of price adjustments in certain fields but was very definite in his view that there was no need or occasion for any general rise in price of the goods affected. In some cases, due to the ability of manufacturers and distributors to adjust prices of goods which were out of line, there should be reductions in prices.

The suspensions from the price ceiling apply to imported goods as well as to domestic goods. Many of the goods in question are of a luxury character and prior to the war were imported in considerable quantities and their renewed importation will be facilitated as a result of to-day's action.

At the same time there was released a copy of a letter Donald Gordon, Chairman of the W.P.T.B. had sent to several hundred representative manufacturers, wholesalers and re-

tailors handling the goods in question, emphasizing that the dangers of inflation were not past, and the importance of orderly de-control, and requesting their co-operation.

Board Order No. 596, which suspends the ceilings on the goods and services in question, requires that every seller of such goods and services continue to retain all records of past and future sales and purchases of such goods and of the maximum prices for them.

List of Items

The list of items from which price ceilings have been lifted is as follows:

PART I—GOODS

1. Aircraft and complete parts thereof.
2. Artificial flowers and decorative feathers.
3. Artists' pallets and easels.
4. Bleaches packaged or bottled for household use.
5. Books, including reprints, periodicals and pamphlets, but not including blank or partially blank books intended to be filled in.
6. Cleaning fluids and preparations as follows: sweeping compounds, spot removers, cleaning fluids for clothes, rugs, drapes, upholstery and other fabrics; car and wall cleaners.
7. Cosmetics, toilet preparations and perfumes, not including soaps, shampoos or dentifrices.
8. Drugs; proprietary and patent medicines; household remedies.
9. Foods as follows: hops; desiccated cocoanut and whole cocoanut; preserved horseradish; edible tree nuts; olives; dehydrated vegetables; preserved ginger; ice cream stabilizers, excluding gelatine; dehydrated or evaporated bananas; fruits in brine or sulphured, including citrus skins and citron; maraschino type cherries; candied, glace or drained fruits and candied or drained peels and citron.
10. Firearms, ammunition, explosives and fireworks.
11. Games of all kinds; accessories and equipment (other than furniture such as card tables or articles to be worn or articles chiefly of woven fabrics such as card table covers) for games and sports except the following: baseball, softball, rugby, soccer, basketball, volleyball, handball, tennis, badminton, golf, lacrosse, ice and field hockey, skating, skiing.
12. Hairdressing accessories, such as bows, bandeaux, barettes, fancy combs and ornaments (but not including hair nets, hair pins or bobby pins) and curlers, wavers and rollers other than those designed for use primarily in beauty parlors.
13. Jewellery of any material for the adornment of the person including diamonds and other precious and semi-precious stones, but not including watches and clocks.
14. Objects of art and household articles designed chiefly for decorative rather than utility purposes, but not including furniture or articles of fabric; articles designed for the observance of religious rites, other than articles to be worn or other articles of fabric; candles of all kinds.

15. Pictorial post cards, greeting cards, calendars and similar artistic cards or folders.

16. Photographs, pictures (other than of fabric) and picture and photo frames.

17. Printed music, bound or in sheets, and music for mechanical player pianos.

18. Polishes as follows: metal, silver, brass, glass and window.

19. Shaving accessories, including blades, strops, hones, and sharpeners, but not including razors, soaps or shaving creams.

20. Smokers' accessories, including pipes and cigarette papers but not including lighters, wearing apparel or articles of furniture.

21. Refined silver and articles of sterling silver.

22. Sundry household articles as follows: hangers (coat, dress, skirt and trousers), stocking, sock and sweater driers, shoe trees and stretchers, corner brackets, corner shelves, wall shelves, bird houses and cages, book ends, holders (flower pot, broom, match and match box) lawn ornaments, paper cutters and weights, tie racks, blanket holders, cutlery boxes, powder boxes, grocery pick-ups.

23. Tobaccos, cigars and cigarettes.

24. Toys, dolls, children's sleighs and children's wheel goods, but not including children's furniture, baby carriages on wheels or runners, or bicycles.

25. Used goods (but not scrap goods) as follows: machine tools, sheet metal working machines, wood working machines; clothing; industrial sewing machines, cameras, binoculars, lenses and photographic equipment; beer bottles, bottles and jars for food and food products; pharmaceutical bottles, toilet goods bottles and proprietary medicine bottles; washed and unwashed wiping rags; wine and spirits bottles; metal pipe; steel shafting; structural steel; and all other used goods the maximum price for which has not been fixed by any order specifically referring to those goods.

26. Women's millinery.

27. Yachts, boats and canoes.

PART II—SERVICES

1. The making, dressing, dyeing and repairing of furs, fur pieces and fur garments.

2. The manufacturing of private formula medicines or toilet goods on a custom or commission basis; the packaging of household drugs or toilet goods on a custom or commission basis; the manufacture of dentures and plates for practising dentists; the cleaning, processing and drying of seeds on a custom or commission basis; the processing, packing and storing of raw leaf tobacco on a custom or commission basis.

3. Publishing, printing, engraving and matrice plate and die making services; the installation, repairing and maintenance of printing presses and printing machinery.

4. The repairing and maintenance of plant machinery and equipment and office inter-communication systems; the installation, repairing and maintenance of commercial refrigeration, air conditioning equipment, industrial sewing machines and machine tools; the installation, repairing and maintenance of municipal service equipment, including fire fighting equipment; the repairing and maintenance of type-

writers, office machinery and equipment, office and accounting machines, hospital and physicians' equipment, surgical instruments, sterilizers, dental units and chairs; the installation, repairing and maintenance of household furniture and appliances; the repairing and maintenance of bicycles.

5. Services performed by optometrists and opticians, developing and printing of photographic films and plates; engraving, repairing and maintenance of jewellery of all kinds, including clocks, watches, silverware and gold-

ware; the making of personal portraits by professional photographers for a price.

6. The supplying of electricity, gas, steam or water (except by a landlord to a tenant); the supplying of telegraph, wireless or telephone service; the transportation of persons except by steam railway; the provision of dock, harbour or pier facilities.

7. The washing of bottles and wiping rags; the washing, repairing and maintenance of barrels, kegs and drums; the sewing and repairing of used bags and bagging.

Modification of Salary Control

The Wartime Salaries Order, which is administered by the Department of National Revenue, has been amended to enable the administration to "take into consideration, with a view to adjustment, those salaried officials whose rate of salary is unduly low having regard to the rates paid for substantially similar services in the same or other business."

The Hon. J. J. McCann, Minister of National Revenue, declared: "It is anticipated that under the Order as now amended all anomalous and unreasonable circumstances can be dealt with within the terms of the Order.

"The amendment is not to be taken as a lifting of the salaries control but rather as indicative of the fact that special cases of hardship and unfairness may be dealt with either individually or as a group. Otherwise the control continues."

The new order (P.C. 349, January 31) amends the original order (P.C. 1549, Feb. 27, 1942) as follows:—

1. By striking out the words "in exceptional circumstances" in sub-paragraph (f) of paragraph 3 thereof.

2. By inserting the following paragraph as sub-paragraph (g) in paragraph 3 thereof immediately following sub-paragraph (f) thereof:

"(g) Authorize an employer to increase the rate of salary paid to a salaried official whose rate of salary is unduly low in relation to a reasonable and proper rate, having regard to the salary rates payable to salaried officials for the same or substantially similar services in the same business or in like businesses, provided that the new rate of salary authorized by the Minister shall not exceed a reasonable and proper rate so determined."

3. By striking out the three paragraphs immediately following new paragraph 3 (g) and substituting therefor the following:

"Application for permission to pay an increased rate of salary to a salaried official pursuant to this paragraph shall be submitted by the employer to the Minister on the prescribed form setting forth all the facts which, in the opinion of the employer, warrant the proposed salary adjustment.

Increased rates of salary to be paid to salaried officials pursuant to this paragraph shall not be authorized with retroactive effect for periods exceeding three months from the first day of the month in which the application is received by the Minister, unless in any special case there are circumstances which, in the opinion of the Minister, justify approval of an earlier effective date.

No payment of an increase in salary pursuant to the provisions of sub-paragraphs (e), (d), (e), (f) or (g), or on account thereof, shall be made to a salaried official until notification has been received by the employer from the Minister stating that an increase in salary has been approved and the amount thereof.

The decision of the Minister as to whether an increase in salary is to be permitted under the terms of such sub-paragraphs, and as to the amount thereof shall be final and conclusive.

If any increase in salary has been approved and a new salary level established in accordance with this paragraph, the provisions of this Order shall apply to such salary level from the effective date of that increase as if it had been established at November 6, 1941."

4. By striking out paragraph 5 thereof.

5. By adding the following words to the end of paragraph 7 thereof:

"provided that in cases where a disallowance of the full amount specified herein will work severe hardship, and the Minister is satisfied that the amount was paid by reason of a misunderstanding of the terms of this Order, he may determine the amount to be disallowed under this paragraph."

Recommendations of Boards of Conciliation in the Matter of Union Security

FROM the institution of the Wartime Labour Relations Regulations in March, 1944, to December 31, 1945, 147 Boards of Conciliation have been established, of which 132 have reported with 15 reports pending.

In 125 of the 132 Boards of Conciliation which have reported, union security has been at issue, and 90 (72 per cent) of the Boards have recommended some form of union security. Union security has thus been recommended by five out of every seven Boards dealing with the subject.

The unanimous or majority recommendations of the Boards with respect to the various forms of union security are expressed below, numerically and as percentages of all cases involving union security.

	Number	Per Cent
Number of Boards of Conciliation established	147	
Number of Boards of Conciliation reporting to date.....	132	
Number of Boards of Conciliation before which union security was at issue	125	100
Number of Boards of Conciliation recommending some form of union security	90	72
(a) Boards recommending both check-off and maintenance of membership	24	19.2
(b) Boards recommending check-off solely	50	40
(c) Boards recommending maintenance of membership solely	11	8.8
(d) Boards recommending union shop and check-off.....	3	2.4
(e) Boards recommending union shop solely	2	1.6

The findings of the Boards may also be expressed as follows:—

(i) Boards recommending check-off (see (a), (b) and (d) above)	77	61.6
(ii) Boards recommending maintenance of membership (see (a) and (c) above)	35	28
(iii) Boards recommending union shop (see (d) and (e) above)	5	4

The form of union security that has generally been asked for by unions is the union shop. Under a union shop agreement a com-

pany may hire non-union members, but these new employees must join the union within a specified period of time.

In no case has a Board of Conciliation recommended a closed shop agreement, but a union shop has five times been recommended, three times in majority reports, with the employer's nominee disagreeing, and twice unanimously. In three of these cases a modified form was recommended which does not require existing employees who are non-union members to join the union, but requires all new employees to join after a specified time.

Where the union shop has been refused Boards have frequently recommended a maintenance-of-membership clause as a compromise measure of union security. Such an agreement requires all employees who are union members when the agreement is signed, and all those who subsequently become members, to retain their membership as a condition of continued employment. Maintenance of membership has been recommended by 35 Boards.

A more commonly proposed form of union security has been the check-off of union dues, which has been recommended by 77 Boards. The type of check-off clause generally favoured by Boards is the so-called "voluntary" form, under which each employee must make a written submission to the employer, authorizing him to deduct each month the amount of the union dues, and to remit the amount to the union treasurer.

Under the Wartime Labour Relations Regulations, Boards of Conciliation are appointed when negotiations for an agreement have been unsuccessfully continued for thirty days following certification of bargaining representatives; and, further, a conciliation officer has been unable to bring about a settlement and reports that in his view an agreement might be facilitated by the appointment of a Board.

Boards consist of representatives of employers and employees and a neutral chairman. Their recommendations are not binding on the parties to a dispute.

Location and Effects of Wartime Industrial Expansion in Canada 1939-1944

THE Directorate of Economic Research of the Department of Reconstruction has issued a report entitled, "Location and Effects of Wartime Industrial Expansion in Canada 1939-1944".

The study deals with the industrial change that has taken place in Canada during the war years. Because reconstruction has had to start from that change, the study is designed to present an outline of its dimensions and its effects upon the Canadian economy. "It is against this background, as well as the vision of the future, that reconversion is to be considered".

Although reconversion and re-employment are national matters, the report states, reconstruction policies will have to take into account differences and peculiarities of regional and local industrial development and conditions. Towards this end the report emphasizes the need for considering employment in terms of "areas", "basic industries" and "occupations".

The study was initiated by the Advisory Committee on Reconstruction in 1942 together with a number of surveys and reports in accordance with the Committee's terms of reference to collect, receive and arrange information with regard to reconversion policy and activities in Canada and abroad. (L.G., 1943, p. 1467; 1944, p. 150). When the Committee had completed its work toward the end of 1943, a compilation of wartime industrial employment statistics up to the middle of that year had been prepared. It was deemed desirable however to delay the preparation of the report until (a) war production in Canada had passed its peak, which was in the last quarter of 1943 and (b) a certain distance from the task of industrial adjustment for war allowed proper appraisal of the re-employment problem.

The task of developing the concept and the statistical presentation of the survey was undertaken by Dr. L. C. Marsh, the Research adviser of the advisory committee on Reconstruction. The report was prepared under the supervision of Dr. O. J. Firestone.

Extent of Wartime Industrial Expansion

In a summary of its principal findings, the report states that Canada's manufacturing capacity has, during almost six years of war, increased at a rate unsurpassed in her history,

hastening the process of industrialization that had been accomplished during the period between World War I and World War II. In 1919, agriculture was Canada's most important industry, contributing 44 per cent to the total net value of commodity production, amounting to \$3.3 billion against 33 per cent for manufacturing. By 1939, this position was almost reversed, with manufacturing contributing 39 per cent to the country's total net value of production of \$3.2 billions, as against 22 per cent for agriculture. By 1943, manufacturing had increased its lead to 54 per cent of the total of \$6.3 billion, while agriculture, in spite of very substantial contributions to feed millions of Canadians at home and allied nationals abroad, made up only 20 per cent of the net output. A similar trend is indicated for the remaining war years.

In Canada the most striking result of the war is the rapid expansion of productive capacity in manufacturing industry. To-day Canada stands ready and equipped to produce more goods in more varieties than at any other previous period. The net value of production in manufacturing during the period 1939-1943 increased 167 per cent; the number of employees increased 92 per cent while the payroll rose 160 per cent. This substantial expansion came from the contribution which Canadian industry made to the war effort of this country. Employment in war industry (employment on direct and indirect war production and construction, and the war content of employment in ancillary industries) reached a peak of 1,166,000 on October 1, 1943, and then began to taper off as war production programs were continuously curtailed. By V-E Day (May 8, 1945) employment in war industry had declined to 888,000 and on V-J Day (August 14, 1945) it stood at 600,000.

The war necessitated the establishment of new industries, new factories, shipyards and munitions plants; while many existing industries underwent marked expansion. Some industries with relatively small employment before the war attained such wartime development that it was tantamount to the creation of a new industry rather than the expansion of an old one. Advances were made in the production of finished goods and equipment, some of which were of a type quite new to Canadian industry and had previously been imported from abroad. Much of this industrial

expansion occurred in secondary industries, as in the rapid development of a Canadian tool-making industry, the growth of the chemical industry and the rapid expansion of aluminum production. While some munitions plants, because of their location or equipment, are proving to be of no value in peacetime production, the remaining increase in industrial productive capacity is available for economic utilization. The war then, as the result of the munitions program, saw the emergence of a vastly expanded industrial structure much of which it is intended to retain for peacetime use.

Up to V-J Day the government had spent \$706 million on industrial plant expansion, excluding tooling costs. Of this amount, 75 per cent represents investment in plants wholly owned by the Crown. It is estimated that two-thirds of this industrial capacity created during the war years can be put to good use for peacetime productive efforts. Of course, the present use-value of the original investment will be considerably less than two-thirds of the initial expenditure because of the need to allow for depreciation and obsolescence. An additional \$500 million of war industrial expansion was undertaken directly by private industry and represents the amount authorized under the War Exchange Conservation Act and by the War Contract Depreciation Board. Information available indicates that at least 70 per cent of this investment will have a post-war value.

New Products

Canadian manufacturing industries are planning to expand and produce many new lines, including at least one hundred major products never before manufactured in Canada. For example, end-products range from inter-city buses, prefabricated houses, glass fabrics and plastic products to a myriad of household articles. The development of the toy industry in Canada gives promise of an end to reliance on foreign countries. Primary materials and components of manufactured articles include ball and roller type bearings; polymer flake, an important material for nylon fabrics; special type yarns; synthetic resins; titanium dioxide for all types of paints. The list of new products includes medicines and chemicals as well as many types of plant machinery and equipment never before made in Canada.

Problems of Reconversion

The transition period of industrial reconversion presents two problems. The immediate problem is of a technical nature and relates to the reconversion of plant and equipment engaged in wartime production to use for peacetime production. The second problem

is one of a substantial re-alignment of the labour force and involves absorption into peacetime industry of demobilized service personnel and of workers who have been engaged in the manufacture of war goods. Absorption into civilian industry of former war workers in turn involves migration of industrial workers from wartime boom towns and from areas inflated in employment, due to war industries, to other areas and sources of employment. While this problem is proceeding to solve itself with the termination of war contracts and the shutting down of plants for re-tooling, it will extend into the future for a much longer period than will the process of technical reconversion.

The munitions, aircraft and, to a lesser extent, the shipbuilding industries are difficult to convert from war to peace; the automotive, metals, and miscellaneous industry group comprising such industries as lumber, food processing and textiles, are, on the other hand, fairly readily convertible. In munitions, aircraft and shipbuilding, where marked wartime expansion occurred, substantial declines in employment were registered as war contracts terminated. During the period May 1 to October 1, 1945, employment in the munitions industry declined from 63,000 to 20,000, in the aircraft industry from 59,000 to 18,000 and in the shipbuilding industry from 64,000 to 44,000. The iron and steel, aluminum, chemical and abrasive industries whose productive capacity has increased extensively during the war years showed a much smaller decline in employment than the direct war manufacturing industries because in these fields decline of war employment was offset by expansion in civilian employment.

The absorptive capacity of the economy during the present period of re-adjustment is well indicated in many of the plants hitherto engaged on war contracts. In a large number of companies carrying out about 76 per cent of war manufacturing, the decline in war employment between May 1 and September 1 of this year was offset to the extent of 51 per cent by an expansion of civilian employment. Such an expansion is significant in that in this segment of manufacturing are to be found the major problems of conversion and of non-convertible capacity; and also because a substantial shift from war work has been accomplished without the workers being obliged to change their place of employment. To the extent that such a shift takes place, dislocation is minimized.

Greater Employment Anticipated

Operation of the new industrial facilities and especially of manufacturing facilities at much higher levels than in 1939 will give employment

to more workers than were employed in Canadian factories and in the trades dependent on them before the war. Some of this new industrial capacity will find outlets in the home market. Industrial expansion, however, has been on a scale that far exceeds the possibilities of domestic consumption, and markets abroad are necessary to keep Canadian industrial facilities operating at levels approaching their new capacity. A change can be expected, therefore, in the relative importance of the items comprising Canadian export trade, with manufactured products making a larger contribution to the total volume and value of export trade, and hence to the national level of employment and income. Imports have hitherto consisted largely of manufactured goods, but now with Canadian factories in a position to produce many of the things previously imported, raw materials and semi-processed items may become more important relatively as items in the volume and value of import trade.

Changes in Population

During the war there were not only transfers of employment from one field to another but also from one region to another. Large inter-provincial migrations of workers led to substantial shifts in the geographical distribution of the population. The general direction of the exodus was mainly from the non-industrial regions to the industrial regions—from the Prairies to British Columbia and Ontario—which were the main recipients of inter-provincial migration. Quebec also contributed slightly to this migration while in the Maritimes, Prince Edward Island and New Brunswick contributed population to Nova Scotia. Within regions there has been a great movement of the population from rural to urban areas with the chief shift toward the large cities—the metropolitan centres. The war speeded up the existing trends towards increased urbanization and the drift toward the industrialized sections of the country due to the greater job opportunities there as compared to the agricultural regions. During the period 1939-1944, Ontario, Quebec and British Columbia ranked highest in total employment with employment in war manufacturing chiefly concentrated in the highly industrialized areas of Ontario and Quebec and to a lesser extent

in British Columbia and Nova Scotia. These provinces have the heaviest concentration of the inconvertible segments of war manufacturing.

Principal Industrial Areas

The principal industrial areas are the metropolitan centres of the country. These centres not only attracted workers in the provinces in which they are located but also drew employees from other provinces, and as a consequence, their wartime growth has been relatively much greater than that of their respective provinces. This great increase in wartime employment in the leading centres was largely due to the existence of plant and equipment facilities which could be readily adapted to wartime production as well as to the concentration of more or less skilled labour in these localities.

Because of the production declines taking place in essentially wartime industries, the problem is to place portions of the labour force in civilian industries experiencing labour shortages in the various centres and to retain others in those direct manufacturing groups converting to production of peacetime counterparts. The successful solution to this problem will depend upon the conditions present in the various centres in respect to the type of industries, attractiveness of the alternative employment opportunities and whether expansion of civilian employment will develop sufficiently to take up a great part of the slack of the decline. The study lists seven principal metropolitan centres namely: Montreal, Toronto, Vancouver, Hamilton, Windsor, Quebec city and Winnipeg, and presents an analysis of the problems and possible developments in the respective centres. Summary tables and detailed charts on Wartime Industrial Employment for selected dates, 1939-1944 are contained in the report.

Summarizing, Canadian industry, grown in stature and capacity, has demonstrated in recent years the potentialities that lie in making full use of the resources (human and natural) of the country. If adequately utilized, the experiences gained, the techniques developed, the capacities created and the skills acquired in the field of manufacturing industry, hold promise for increased returns for the Canadian people in terms of raising their standard of living.

Operations of Consumers' Co-operatives in United States, 1944

THE Bureau of Labour Statistics of the United States Department of Labour has issued a bulletin outlining the operation of consumers' co-operatives in that country for 1944.

It states that "continued expansion in both membership and business was exhibited by the whole co-operative movement, with the exception of credit unions. Up to 1942 credit unions surpassed all other types; in that year, however, its statistics began to reflect the wartime conditions (restrictions on instalment credit, diminishing consumer supplies, higher earnings with consequent lessening credit requirements)." In 1944 however the decrease was checked and a slight upturn occurred.

The distributive and service business of local associations achieved an all-time high during the year of 568 million dollars and the regional

and district wholesale associations supplying them reported an aggregate business of 155 million dollars. Service federations had a 7½ million dollar turnover. The volume of this local service business, which includes a wide variety of associations, such as those furnishing rooms and meals, housing accommodations, medical care, funeral service, water, cold-storage lockers, recreation, etc., has remained quite stationary in the past 15 years. The report states that "it would appear that one of the fields offering great possibilities for co-operative development is that of service."

Activities of Local Co-operatives

The retail distributive associations, consisting mainly of stores and buying clubs and petroleum associations, have evidenced considerable growth in membership; stores and buying clubs

MEMBERSHIP AND BUSINESS OF CONSUMERS' CO-OPERATIVES IN UNITED STATES BY TYPE OF ASSOCIATION, 1944

Type of association	Total number of associations (estimated)	Number of members (estimated)	Amount of business (estimated)

¹ Such as dairies, creameries, bakeries, etc.

² Gross income.

³ Local associations only; does not include associations of federated type (included with service federations) or funeral departments of store associations.

⁴ Such as cold-storage, water-supply, recreation, printing and publishing, etc., associations.

⁵ Almost all of these are REA associations, data for which were supplied by the Rural Electrification Administration.

⁶ Patrons.

⁷ Data are for 1936; no information on which to base later estimate.

⁸ Actual figures, not an estimate.

⁹ Policyholders.

¹⁰ Figures here include estimates for nonreporting associations.

¹¹ Includes wholesale (and retail, where such was reported) business.

showed a larger rate of increase. This rate receded considerably in 1944, showing an increase of 19.6 per cent, compared with 28.8 and 30.8 in 1943 and 1942. Net earnings for associations showing profits averaged 4.6 per cent of sales; losses for associations incurring deficits averaged 1.5 per cent of sales. Corresponding percentages for petroleum associations were 7.8 and 6.7. Operational deficits in both groups were usually associated with high overhead resulting from small sales volumes. A considerable portion of earnings consisted of "patronage refunds" on goods bought from their wholesale associations rather than gains from retail distributive operations. In the various associations the wholesales refund constituted from about a fifth to a half of reported earnings.

"Although no general survey of insurance co-operatives was undertaken in 1944, in the United States, available reports indicate a considerable advance in this field of co-operative activity."

Activities of Central Organizations

The report states that "the membership and business of central organizations providing supplies at wholesale, numerous kinds of service, and manufactures in increasing variety continued their advance in 1944." A distributive and service business of over 151 million dollars was recorded, which resulted in nearly 8 million dollars being returned in patronage refunds.

Membership (local retail co-operatives) showed "a remarkable increase," most of it being accounted for by a few of the larger wholesales. In all 501 new affiliations took place during the year.

A number of the wholesales added to their facilities during the year and no association re-

ported voluntary discontinuance of any lines or services, although market shortages in some cases resulted in temporary inability to provide some items.

Without exception the reporting wholesales' distributive business increased considerably in 1944. Regional wholesales' averages increased nearly 18 per cent and district organizations recorded nearly 23 per cent. Five of the regional wholesales had a business exceeding 10 millions of dollars each in the year. National co-operatives showed an increase of slightly over 60 per cent. Appliances, hardware, and farm supplies accounted for the largest volume of business, followed in order by building material, groceries and automotive supplies.

SERVICES

The bulletin states that "services in increasing variety are being offered not only by the co-operative wholesale associations, but also by federations established for the sole purpose of providing services which the member associations either cannot or do not desire to perform themselves." As compared with 1943, the service business of reporting central organizations more than doubled, rising from \$5,163,060 to \$11,652,806.

Central Co-operative Production

Large proportions of both retail and wholesale earnings are the result of central-federation operation of productive plants. Co-operative production has increased very rapidly in the past few years. In 1944 the value of goods produced in co-operative plants in the United States, amounted to over 65 million dollars; an increase of more than twice the amount produced in the preceding year. "It is these productive enterprises that have proved to be the real money savers for co-operators."

Wages and Labour in Cotton Spinning in the United Kingdom

Recommendations of Commission of Inquiry

WAGE arrangements and methods of organization of work in the Lancashire cotton spinning industry have been considered by a Commission appointed last August under the chairmanship of Mr. Justice Evershed. Four representatives of the employers' association and four of the two unions in the industry made up the Commission which was formed as a result of conferences between the employers and unions held under the auspices of Sir Stafford Cripps, President of the Board of Trade. The Minister of Labour and National Service was asked to appoint a chairman for the Commission.

The purpose of the Commission was to review conditions and make recommendations for the removal of

characteristics of the wage structure or of the conditions of working which have acted, or may be justly regarded, as deterrents to recruitment, [so as] to make the cotton spinning industry reasonably attractive as an employment and a career . . . Secondly, and this point is complementary to the first—the provision of proper wages and proper working conditions at least fairly comparable with those offered by other industries to workers of light competence and similarly in accordance with present day standards, must be regarded as a first charge upon the energies and resources of the industry.

Before proceeding to discuss questions of wage structure and organization, the Commission makes some general observations concerning certain matters to which, it considers, attention must be given if the industry is to recover general favour. As regards provision for the welfare and comfort of the workers, the Commission emphasizes that the cotton spinning industry must immediately take such steps as are necessary to comply with present day standards and thereafter keep abreast of the times. Since the Chief Inspector of Factories has appointed committees to consider the elimination, as far as possible, of excessive heat, noise and dust in the mills, the Commission merely mentions this problem. There are complaints, too, about inadequate provision of lavatories, restrooms, rooms for changing clothes and other amenities.

Another point with which the Commission deals briefly but the importance of which it stresses is the necessity of a "good spin". The Commission believes that "bad spinning" will instantly undo all the good that may be expected to flow from their recommendations. They recommend that the employers' and

unions' representatives should get together at once with a view to establishing standards of spinning conditions and procedure for enforcing the conditions. It is remarked that

Bad spinning and disregard of the proper standard of amenities should be treated—as in fact they are—as evidence of business inefficiency. Inefficiency should have no place in the spinning industry which all desire to see established and flourishing.

The Commission's recommendations are designed:

first, to establish a scale of wages which (1) will provide both a proper basis of security and a just return for skill and industry, commensurate with the standards of the day and (2) will, so far as is possible, be free from anomalies and undue perplexities; and, second, to provide by methods of staffing and organization the most efficient use of the labour available and, for the worker, the elimination as far as practicable, of "blind alley" occupations, and proper prospects of promotion, not only to the highest grade of operative, but also for those with requisite skill, initiative and ambition through and beyond the operative grades to the responsible managerial and executive posts.

Certain general conditions are indicated by the Commission as affecting the industry at this time. Of paramount importance is the assurance that capital, management and labour are not serving opposing interests but are together concerned to provide the health and efficiency of the industry. The industry must improve its technical efficiency, adopt new machines and new techniques. On the workers' side, there must be readiness to work to improve productivity.

While the present shortage of labour and material continues, improvements in plant and equipment, including the provision of amenities, will inevitably be delayed. Because of the shortage of labour and of the need for production, the Commission makes no recommendation for a reduction in the present work-week of 48 hours. In emphasizing that the workers must be ready to make their full contribution of work, it is not implied that the work-loads of those who are now making their full contribution should be increased.

The Commission holds that if the cotton industry is to retain its position in world commerce it must encourage the substitution of mechanical processes for human agencies; it must eliminate waste of energy and effort by better arrangement of machines, better servicing arrangements, better deployment of

labour and by other means and must arrive at a just appraisal of work-loads. To assure the co-operation of the workpeople in assessing work-loads, the Commission stresses that it is of the utmost importance that representatives of the trade unions concerned should be invited by the management to join in the conduct and supervision of all investigations and experiments. Collective agreements, the Commission suggests, might well contain a clause requiring an employer wishing to introduce a new machine, or to make a new arrangement of machines or men, to give notice of his intention to the union concerned with an invitation to co-operate in the investigation and application of the new methods.

Need for Adult Male Labour

That the industry should make an appeal to young men and to adult male labour is a factor of fundamental importance to the reorganization of the industry, in the Commission's opinion. In the past, there has been a tendency to employ a large proportion of juveniles at low wage-rates and, among the adult workers, to have a preponderance of women. About 65 per cent of the adults employed in cotton spinning are women. The Commission considers that the disproportionate number of women is due, in part at least, to the relative cheapness of female labour. The present situation calls for a review of these conditions. The Government's policy is to discourage the employment of children and to raise the legal school-leaving age. Moreover, the birthrate has been declining. "Juvenile occupations with low wage-rates have survived the supply of juveniles." As regards women, they are "frequently employed, a tendency emphasized by wartime conditions and labour shortage, in occupations which are by their nature too heavy for them."

To ensure that the industry will attract male labour, the Commission considers that it should be regarded primarily as one of the adult occupations and that the opportunities of employment at all stages of production of adult male workers should be encouraged except in particularly light work adapted for female and juvenile labour. With this aim in view, the Commission recommends that a clear distinction should be drawn between skilled and unskilled work and that the skilled workers should, as far as possible, be relieved of cleaning, sweeping and other unskilled work, this class of work being done by ancillary labour, both juvenile and adult. In the Commission's opinion, many of the unskilled or ancillary functions are by their

nature inappropriate for juveniles and should be performed by adults and in many cases by men.

As to the relative wage-rates for men and women, it is considered that, since there must remain a number of occupations for which adults of either sex are equally appropriate and since, as long as labour remains scarce, women will continue to be employed in large numbers, the proper course is to define the occupations which should be regarded primarily as men's occupations and those which should be regarded as primarily women's occupations, to fix the rates appropriate to the different occupations, and to recommend that the rates so fixed should be payable whether the worker is a man or a woman. The Commission sees

no justification for paying different wages to male operatives doing a fixed task from wages payable to a female doing the same task. Such wage arrangements will in practice tend towards the greater employment of male adult labour.

For unskilled work, wages should be paid at rates adequate and appropriate for adult married men or adult women according to whether the particular task is regarded as one primarily appropriate for male or female labour respectively but without regard to the sex of the operative who in fact performs such task.

A system of minimum time-rates, supplemented, where appropriate, by piece-rates is, in the Commission's opinion, best adapted to provide on the one hand a just measure of security for the operative and at the same time an incentive towards the increased production which is so pressing a need.

This system of time-rates would assist in getting rid of the widespread practice of sharing the wages of absent workers which the Commission believes should be discontinued as soon as possible. Where operatives take on extra loads to make up for casual absences of other workers they should be paid at appropriate rates including overtime. In other cases, it may be best that certain machines should stop until they can be properly staffed. All existing bonuses should be incorporated in the minimum time-rates. These rates should, in themselves,

constitute an adequate and satisfactory wage, acceptable as such, when for reasons outside the operative's control the opportunity of earning the piece-rate wage is denied to him or her.

Further, the Commission was

anxious that the time base wage should in effect provide a "guaranteed week" for the operative who is ready and willing to work, and this will follow where the operative is employed by the week, for in such cases unless and until a clear week's notice has been given and taken effect, the operative, if ready and willing to work, will be entitled to receive the minor basis wage.

Piece-rates, on the other hand, must form a real incentive to effort. Bearing in mind the circumstances of the industry, the Commission concludes that the piece-rate earnings of an operative of average skill and industry in a normal week should yield a wage not less than 20 per cent above the time base minimum. The time-rate minimum should apply in the case of all stoppages arising from causes beyond the operative's control but where such a stoppage amounts to four hours or less in any week the workers should be paid production rates.

New piece-rates or other variation should be negotiated by the employers' and operatives' representatives whenever new or improved machines or methods of organization make substantial changes. Great importance is attached by the Commission to assuring the workers that their additional efforts will not result in reduction of the piece-rate. It is recommended, therefore, that the publication of the piece-rate should be accompanied by such an assuring statement.

Wage-for-Age Scales for Juveniles

For juvenile labour, the Commission urges the adoption of wage-for-age scales, systematic vocational training, and apprenticeship. The practice of fixing wages according to age should be applied to all occupations into which juveniles are normally recruited. In order to promote the utmost fluidity and interchangeability of labour between occupations and departments in the industry, it is strongly recommended that the wage-for-age scales should, as far as possible, lay down uniform wages,

perhaps not a single scale, but one for skilled work and another for unskilled. These scales should embody time-rates which, in piece-work occupations, would constitute minimum wages. Wherever juveniles do work usually done by adults, they should normally be paid the adult rate for the job.

As regards the training of juveniles, the Commission recommends

systematic training for all skilled occupations by competent operatives specially selected for their ability to teach on sound lines and to look after the general well-being of the new entrants during the training period. The operatives concerned should, in our view, be paid time-rates in excess of their normal earnings or, alternatively, an increment to their piece-work earnings which will produce the same result.

Apprenticeship is recommended for mule spinning in which there are well defined steps of promotion. Before introducing apprenticeship on a larger scale, it is suggested that the recommendations on wages and labour in general should be implemented and their results watched.

An important recommendation is that for the replacement of the different "local lists" by one single or uniform code of wage ascertainment for each section of the industry. The system of local lists is considered to have no application to modern methods of work and has brought about many anomalies and complexities. In determining the uniform lists, regard should be had to the need for raising the general level of wages in the industry. In the Commission's opinion, there should be no reduction in the present wage levels.

Factory Inspection in Great Britain in 1944

Accident Prevention—Hours of Work—Health—Medical Examinations—Advisory Committees

THE annual Report for 1944 of the Chief Inspector of Factories in Great Britain recounts a story of further efforts to reduce accidents, to lessen the incidence of occupational diseases, to decrease hours of work, to extend and improve canteen services and other amenities, and to bring about the application of new ideas concerning proper ventilation and adequate lighting and the provision of suitable seats for workers.

In the early part of the year before D-Day, production was pressed to its peak, hours were lengthened in some industries and the construction of the "Mulberry" Harbours involved new methods in new and improvised places and the rapid drafting of labour into the area. But the expected crop of serious accidents did not occur.

In the closing months of the year, factory inspection work, in some aspects at least, was beginning to settle down to peace-time activities, but materials and labour were still scarce, worn-out or outmoded buildings and equipment of all sorts had to be made do, fuel was short and emergency permits for extended work hours, although fewer, had still to be issued.

Nevertheless, the lessons learned and the advances made during the war were not being forgotten or lost. Hours were reduced, particularly of women and young persons; safety organization in factories was extended and improved; progress was made in rendering effective the new requirements of the Factories Act, 1937 (for example, in regard to hoists and lifts on which there were only two fatal acci-

dents in 1944, compared with 20, 29 and 13 in the three pre-war years, and only 158 accidents in all compared with 490, 432, 304, in 1936-38 and 292, 246 and 193 in 1941-43); more suitable systems of local exhaust were devised and installed in dust and fume-producing processes; washing accommodation, now compulsory in all factories, is being gradually provided as the necessary fittings, materials and labour become available; as regards good lighting, now recognized as an important factor in preventing unrest, fatigue and accidents, while progress was made, it is proposed to impose on all factories by regulation in the near future certain specific requirements; the wartime extension of provision of seats for women and girls at work has led some factories to provide seats for men and to permit the workers to sit while on jobs at which they formerly stood. The question of seating facilities was considered by a special committee of employers, workers, outside medical opinion and factory inspectors and their recommendations are before the department.

Accident Prevention

The decrease in accidents reported in 1943 was continued in 1944. Fatal accidents fell in 1944 by nearly 18 per cent, and non-fatal by 9 per cent, a decline attributed, chiefly, to the decrease in man-hours of exposure to risk, partly to relief from strain and monotony. The war-time increase in accidents due to the great use of untrained labour is being brought under control. A rough estimate of the numbers employed in factories in 1938-44 permits the calculation of the approximate accident-rate per 1,000 persons employed. The rate rises from 37 for men over 18 in 1938, and 36 in 1939 to 53 in 1942 and 1943, but falls to 51 in 1944. For women over 18, it rises from 10 in 1938 to 28 in 1942 and 1943 and declines to 25 in 1944. For boys under 18 it moves from 46 in 1938 and 1939 to 59 in 1942 dropping to 55 in 1944. For girls under 18, the movement is from 14 in 1938 to 22 in 1942 and down to 20 in 1944.

The need for both safety regulations and safety education is emphasized. The law, it is pointed out, has its chief influence on accidents due to power-driven machinery and the continued fall in the percentage due to this cause (now 15.6 per cent) shows that this influence is still going on, and must be continued because so many of these accidents are the cause of mutilations and severe injuries. One effect of the tightening up of the law is shown by the figures for accidents on hoists and lifts given above. In connection with accidents occurring when the worker's

hair is caught in moving machinery, it is remarked that in too many cases the cause is still the lack of secure fencing, and investigation shows that some managements still rely on the women and girls wearing caps. A Metropolitan Magistrate quietened one particularly vociferous advocate on this point by remarking that "the law requires you to fence the machine not the girl."

Guarding of milling machines and power presses received special attention. Committees on both these problems have been set up and that on power presses has reported. (L.G., 1945, p. 1417.) A radical alteration in the standard of fencing milling machines is considered necessary, in view of changes in the technique of milling and the development of the "negative rake" and other devices. For power presses an interlocked fixed guard has been developed with a view to eliminating the deficiencies of the automatic guard and at the same time to give a degree of enclosure as good as an effective static fixed guard. The Committee has recommended, and the pressmakers have agreed, that in future, where fixed guards cannot be used, presses should be equipped and sold with interlocked fixed guards incorporated in their design.

Adequate protective footwear can make an appreciable reduction in the number of accidents. Vehicles and the falling of articles cause about one in seven of all reportable accidents and two-thirds of them would not cause much injury if the feet were protected. This protection consists of a specially designed toe-cap made of high-grade spring steel built into an ordinary working boot.

The higher accident rate among boys can be curbed by adequate training, proper supervision, prevention of fatigue and full compliance with the Factories Act. As regards training there is a growing interest throughout industry. Many firms release their young employees during working hours to enable them to attend day continuation classes or to secure effective training by other means. Training schools are being set up by many companies. Small firms co-operate with the local technical schools.

In general the schools aim at teaching technical subjects, probably to too great an extent, and most of them are to be found in the engineering and allied trades but even in the mass-production light industries there are a few attempts to give the young worker a more complete view of his function.

In the Chief Inspector's opinion, training along broad lines will give the best results, training that will give a knowledge of the scope of the work of the factory and thus

arouse interest in their own particular jobs. On this can be grafted a training in community spirit that will teach them to respect and use the amenities provided for the benefit of all and under right guidance might lead to a better appreciation of citizenship.

On the question of safety organization in factories, the Chief Inspector points out that while the definite requirements of the law and their enforcement by factory inspectors have reduced the percentage of accidents due to power-driven machinery to only 15·6 per cent of the total, progress in reducing the other 84 per cent can be made only by developing a safety organization within the plant. To aid in making these organizations widespread and effective, the assistance of the Royal Society for the Prevention of Accidents was enlisted in 1941 for a special accident-prevention campaign. The centre of each factory safety organization is the Safety Officer. His committee may be a safety committee or it may be a committee with other functions as well as safety. The Chief Inspector considers that the influence of a works committee on accident-prevention cannot be over-estimated. He believes that the most valuable contribution of the joint campaign of the Factory Department of the Ministry and the Royal Society has been the training of Safety Officers. Three residential ten-day courses were held with 120 students. The report states that—

the real object of the campaign is to secure a right attitude of mind towards accident prevention on the part of the higher executives in every works in the country and, as an aid to carrying out their policy, to help these executives in all the larger factories to have a trained officer who will be an expert of this technical subject and also the executive of the Safety Committee without which real success cannot be attained.... The irrigating effect throughout the country of the knowledge and enthusiasm developed by these officers has been clearly evidenced by the fact that the larger firms are always asking for additional places at future courses, and by the steady and considerable increase of local accident prevention groups.

As was pointed out in last year's Report, the primary function of a safety organization is not to "get at the worker"... The golden rule in preventing mechanical accidents has always been "make the machine safe". This is just as true in the case of non-mechanical accidents; the first attack must be on the process, the tool, the gangway—not on the worker. In the vast majority of cases the words, "the human factor" on the lips of a Safety Officer are an admission of failure. It is, therefore, a misdirection of energy to start by an attempt "to make the worker accident-conscious" by methods akin to high-pressure salesmanship. Education in method has its place but general exhortations to workers to be careful are of little value unless it is abundantly clear that the management has

done everything possible from its end. Even worse are those safety organizations, unfortunately not unknown, whose main activity, apparently, is to emit a network of rules which few workers can remember, let alone obey; and whose main purpose seems to be to enable the firm to say that the worker was breaking a rule whenever an accident happens.

Hours of Work

As regards young persons, a drive to carry out the recommendations made towards the end of 1943 by a committee of both sides of industry has brought about a substantial reduction in hours. The committee urged that there should be no departure from the hours laid down in the Factories Act except in cases of proved necessity on work of urgent national importance and, in such cases, that hours up to but never exceeding 48 hours might be allowed for those under 16 and hours up to but not exceeding 52, for those between 16 and 18, with an extension up to 55 in special cases.

Success in reducing hours in 1944 is shown in the Report. In July, 1944, average hours of youths under 21 were 46·7 as compared with 48 in 1943 and with 46·2 in October, 1938. Girls under 18 were working an average of 44·2 in July, 1944, a decline from 45·1 in 1943 and from 44·6 in July, 1938. For women, there was a decrease during the year from 45·2 to 44·6. The "emergency permissions" for hours not normally permissible have declined in both number and extent. Ninety-three per cent of the permissions for women and young persons on extended day-work and on day and night shifts were for 55 hours or less as compared with 77 per cent in 1943, and those for 52 hours or less amounted to 68 per cent as compared with 30 per cent in the previous year. These figures exclude the two 8-hour day-shift schemes and also the three 8-hour shift schemes in which hours are generally less than 48. They exclude also schemes for juveniles under 16 whose hours in no circumstances may exceed 48. Moreover, the permissions are for maximum hours allowed as distinct from actual hours worked. The latter are known to be considerably less than the permitted hours.

Certain factors have contributed to a reduction in hours generally. Managements have come to realize that long hours, particularly over lengthy periods, do not achieve the desired results in production. To the workers, reduction of night work and overtime, and free weekends brought about by other causes, have brought home the great relief that shorter hours can mean in their ordinary life, particularly after five years of war. The fuel economy campaign led to a drop in night

shifts, then to a cut in overtime and in work on Saturday afternoon, and finally, in some cases, to a five-day week. On this short week the Chief Inspector remarks, "As far as our experience goes, whenever it has been tried, it has been acclaimed by both managements and workers."

Industrial Health

In the field of industrial health, the Factory Department is receiving much support from the widespread public interest which new industrial processes and war conditions have brought about. The Senior Medical Inspector states his

belief that with the extension of education in these matters, the healthiness or otherwise of an occupation will become increasingly the dominant factor in the choice of an occupation. Inescapably, therefore, unhealthy occupations must be made healthy or they will languish and ultimately fade out for lack of labour. Most industries can be improved as far as health and safety are concerned, and it becomes of first importance that each should set itself to attack this problem first. Not only must this matter of occupational hazards be tackled but it must be evident that it is being tackled, and for this it is essential for Industrial Research and Industrial Health Research to be closely integrated on a national scale.

Assisting the medical inspectors are an Industrial Health Advisory Committee, an Industrial Dust Hazard Panel, and three Specialist Advisory Panels recently set up: Radiological, Ophthalmological and Dermatological.

Matters considered by the Ophthalmological Panel included the degree of eye-protection from infra-red radiation required by welders, first-aid treatment of eye injuries including the most suitable types of eye-drops for general use in industry, the maintenance of visual health in industry, infra-red drying processes, keratitis associated with exposure to n-butyl alcohol and epidemic kerato-conjunctivitis.

An interesting report is made in connection with the use in industry of radioactive substances and X-rays. The weekly dosage to which operators are exposed is determined by the Natural Physical Laboratory from dental films carried on their persons by the operators during working hours. Where film tests showed exposure in excess of 1.0 roentgen a week the cause was traced to faulty technique in some cases. Detailed inspections of certain premises were made by the Laboratory. In most factories the conditions were found by the factory inspectors to conform to the Factories (Luminising) (Health and Safety Provisions) Orders, 1942-43 (L.G., 1943, p. 1481). Measures for the further protection of luminisers using radioactive substances and the significance of skin lesions among such workers are being considered by the Radiological Panel.

Lead poisoning in the pottery industry was reported in 432 cases in 1897; in 1944 for the first time in the history of the industry no cases were reported. Twenty-six cases were reported in 1934. The closing down of many of the smaller works under the concentration scheme of the war years is considered a factor in the clean sheet of 1944. The Lead Regulations and, as a result of them, the technical development of the low solubility and leadless glazes are given credit for much of the improvement. No cases of lead poisoning were reported in printing or vitreous enamelling or in shipbuilding. The total of 41 cases, 5 fatal, is the lowest on record.

For dock workers, medical services have been developed in certain areas with the co-operation of employers and unions, Medical Staffs of the docks and the Dock Authorities, Local Authorities, hospitals and general practitioners. On the Liverpool side of the Mersey in the first year, 23,715 cases were dealt with of which 9,034 were new cases. Extension of the services to other areas is forecast but progress is slow because of the complexity of the problem in the large dock areas. Consideration is being given to the special health problems associated with handling certain types of cargo.

Medical Examination of Juveniles

The Factories Act requires every person under 16 years of age who is hired to work in a factory to be examined by an "examining surgeon" and certified fit for the job. A second examination may be required after an interval, or the surgeon may stipulate the conditions under which the juvenile, up to 18 years or less, is to be employed. Where a certificate is refused or revoked, the surgeon must, if requested, give to the parents in writing the reasons for the refusal or revocation.

In 1944, 3,578 juveniles were rejected out of 231,546; conditional certificates were issued in 11,014 cases; in 2,439 cases, provisional certificates good for 21 days or less were given to enable inquiries in past health records.

Boys over 16 years who may be employed in continuous industries such as iron and steel, paper, and glass, at night for not more than 144 hours in three weeks, must also be medically examined before taking on the job, and re-examined later at intervals not exceeding six months. Surgeons were instructed to reject any as to whose fitness there was any doubt. Of 5,831 boys examined, only 57 failed to pass the test.

Special regulations require examination of any person for employment in particular occupations. Under these regulations 354,176 examinations were made and the employment of 2,178 persons was suspended as a result.

Industrial Advisory Committees

Of special interest from the administrative point of view is a section of the Chief Inspector's Report which describes the industrial committees which have been set up from time to time to consider special problems. Such a committee may represent both employers and workers and also the Factory Department or it may include representatives of employers and the Factory Department.

Of the latter kind was a committee in the rubber trade established to devise efficient safeguards for calenders and extruding machines. Another such committee considered the fencing of heavy power presses and, after setting out the specification for guards, this committee recommended that a standing joint committee be formed to devise adequate safeguards for bending brakes or presses and guttering presses. The report of the standing committee of November, 1944, contains a specification of an interlocked fixed guard "which is far in advance of any general purpose guard previously in use or contemplated."

The prevention of accidents between the punches and dies of the most commonly used types of power presses was considered by another committee on which were represented the manufacturers of power presses, press-users and makers of safety devices as well as factory inspectors and others. This committee, too, set out specifications and standards of performance for guards and recommendations on inspection and the training of operators and tool-setters.

To prevent the inhalation of siliceous dust in the manufacture of tiles and other articles in the pottery trade was the object of another committee. Its recommendations included the provision of efficient drying methods and elimination of clay breaking, the adoption of pan grinding, the design of arks and of conveying systems, the introduction of automatic presses and fettling machines, approval of plans for new works and the prohibition of employment of young persons and women on certain processes.

Another committee made recommendations with a view to preventing silicosis in steel foundries.

Committees in the cotton and jute industries are expected to smooth the way for giving effect to some provisions of the Factories Act, 1937, which the war intervened to prevent and which pose some difficulties in old and overcrowded mills. Such problems include the proper spacing and layout of

machinery, provision of improved sanitary accommodation, installation of suitable washing and cloakroom facilities and the raising of the general standard of the amenities in the mills.

In a new industry—plastics, three committees have recently been set up to consider, respectively, the fencing of hydraulic process, welfare and amenities generally, and the design of moulding shops.

Enforcement

Inspectors engaged in seeing that the Factories Act and regulations are complied with numbered 387 at the end of 1944. These included superintending inspectors (men and women), medical, and engineering (civil, mechanical, electrical and chemical) inspectors as well as those on general duties.

It may be of interest to note here that factory inspectors in the United Kingdom are remunerated at a considerably higher scale than in Canada. Both men and women begin at £455 per annum increasing to £875 for men and £745 for women on general inspection; medical inspectors' salaries range from £750 to £1,200 (men and women), engineering from £455 to £1,100 or £1,200, and superintending from £950-1,100 for men and £775-940 for women. Deputy Chief Inspectors receive £1,200 and the Chief Factory Inspector from £1,450 to £1,650.

The Chief Inspector points out that more work will be thrown on the staff by the great changes in industry, the deterioration of machinery, plant and buildings due to lack of upkeep, the scrapping of old machines and the introduction of new machines and processes on an enormous scale. Further, while Inspectors must continue their police duties without which the general standards throughout the country will fall, the technical and advisory side of their work will become more and more important.

In the matter of court proceedings for violations of the Act and regulations, the report shows again that higher penalties are being imposed by the courts, due, in part, to the increased penalties provided in the 1937 Act but due, chiefly, to increased backing by the courts and the influence of public opinion. In 1944, there were 997 convictions, 41 charges were dismissed, penalties imposed amounted to £9,282 with £427 costs awarded against defendants. In 1938, 1,256 convictions brought penalties of £4,931 and £447 costs.

I.L.O. Report on the Training and Employment of Disabled Persons

THE problem of the employment of disabled workers has been tremendously aggravated by six years of war. Information concerning the measures proposed or adopted in various countries for the training and employment of the disabled has been published recently by the International Labour Office after a survey undertaken at the direction of the Governing Body of the Office. The Governing Body recommended that the report be factual and:

(a) That the report should cover all disabled persons who want employment, including those disabled by illness;

(b) That attention be paid to the vocational guidance of disabled persons at the earliest possible stage in their medical treatment;

(c) That attention be paid to policies proposed or adopted for employment of disabled persons under "sheltered conditions";

(d) That attention be paid to the importance of the co-operation of the public authorities with employers' and workers' organizations.

Certain principles for meeting the training and employment needs of disabled persons were embodied in the Employment (Transition from War to Peace) Recommendation, 1944, adopted by the International Labour Conference at Philadelphia. As these general principles are of a permanent character, they provided the point of departure for the present study and are set out in Appendix I to the Report. These principles include the general statement that for all disabled workers full opportunities should be provided for rehabilitation, specialized vocational guidance, training and re-training and employment, and, in addition, the following stipulations: that in applying this general principle, the employability of the worker should be the criterion; that medical services and rehabilitation and placing services should collaborate; that disabled workers, where possible, should be trained with other workers under the same conditions; that experience in their former occupations should be utilized where possible; that employers with suitable training facilities should be induced to train a reasonable proportion of disabled workers and that there should be specialized training centres for those who need special training; that equality of opportunity for jobs should be ensured on the basis of working capacity; that in particularly suitable occupations preference should be given to the

disabled; and that special centres for employment in useful work under non-competitive conditions should be provided for workers who cannot be fitted for normal employment.

After an introduction indicating the scope and character of the problem and pointing out how "disabled person" is defined in various countries for the purposes of specialized training and employment opportunities, the Report discusses the problem under the following chapter headings: general administrative organization, co-ordination of medical and vocational rehabilitation services, identification and registration of disabled persons, vocational guidance, training and re-training, special measures concerning the employment of disabled persons, sheltered employment for the severely disabled, placing arrangements, special conditions of work and comparative job performance.

Arrangements vary from compulsory measures, such as quota systems imposed by governments, to measures taken voluntarily by employers sometimes on encouragement from the Government. Great Britain has introduced a compulsory quota system, under the Disabled Persons (Employment) Act, 1944, (L.G., 1945, p. 1609), whereas in the United States employment of the disabled is almost entirely on a voluntary basis. Other plans being pursued include reservation of certain types of vacancies for the disabled, propaganda campaigns among employers and workers and special action on the part of employment services. In the United States, reluctance of employers to engage handicapped workers due to existing workmen's compensation laws is being overcome by the provision of "second injury" or "subsequent disability" funds, whereby the employer in whose employ a second injury occurs is no longer held liable for permanent total incapacity due partly to a prior injury.

The publication of this Report was expedited for consideration at the 27th Session of the International Labour Conference in Paris in October, 1945, and information is incomplete so far as certain countries are concerned.

The fact is stressed that public policies in many countries are in an initial or experimental stage. As more data are obtained, and more experience gained with the national programs now being undertaken, the Office hopes to present a more adequate report on the question.

Rehabilitation

Progress of Rehabilitation in Canada

THE Honourable Ian A. Mackenzie, Minister of Veterans Affairs has issued a statement outlining the progress made under Canada's rehabilitation program up until December 31, 1945.

The statement revealed that, as of that date, 16,457 veterans have undertaken vocational training; 20,882 are attending Canadian universities or qualifying for admission to them; and 13,050 veterans have been qualified under the Veterans' Land Act (L.G., Dec., 1945, p. 1769). It is hoped that 15,500 veterans will be settled under this Act during 1946.

In the past twelve months a total of \$12,677,000 has been paid out in re-establishment credits to 71,595 veterans, with approximately \$10,000,000 of this amount being used for home purposes. Officials of the Department of Veterans Affairs estimate that \$596,000,000 will be paid out under the scheme during 1946. Of this amount \$266,500,000 will be payments in gratuities and \$60,000,000 in re-establishment credits.

An outline of the Minister's statement is presented below:

Vocational Training

The Minister stated that vocational training is making an important contribution to Canada's future economy. After the last war only disabled veterans or those who enlisted as minors were eligible for training; this resulted in a large percentage of unemployed veterans during the years of depression, because of lack of skill.

"Today, veterans are realizing that there is a real opportunity available through vocational training and at the end of 1945, 16,457 veterans across Canada had taken advantage of it. They received a total of \$920,120 in the month of December alone in maintenance grants."

The Minister paid tribute to the co-operation received from the Department of Labour, through Canadian Vocational Training, and from the Provinces, through their respective Departments of Education. He said he felt it would not be long before the present congestion, caused by the need for more training facilities, would be eased.

"As an indication of the value that this training program will be to Canada, I need point only to one class of tradesman—those in the construction industry. We all know that there has been a shortage of workers in the construction trades and that this has been at least partly responsible for the very acute

housing situation we now have in Canada. It is therefore worth noting that through the vocational training provisions of our rehabilitation program we have at present about 3,900 taking training in the building trades and approximately another 1,300 prepared to enter it."

University Training

University training has proved to be by far the most popular feature of the rehabilitation legislation. "During the month of December, for instance, 20,882 veterans were attending Canadian universities or qualifying for admission. There was paid to them a total of \$1,519,602 during the month in the way of maintenance allowances."

The statement declares that veterans are making an excellent adjustment in their return to studies and quotes as an example a letter received by the Department of Veterans Affairs from the Registrar of Ontario Agricultural College at Guelph.

In this letter the Registrar says, "Our faculty is delighted with the excellent progress made by our ex-service students. I am happy to say that this is one of the finest reports it has been my privilege to submit to our faculty in twenty-five years. You will note the almost amazing record which many of our ex-service students have made."

At the present time in excess of 70 students are taking post-graduate and other courses, not available in Canada, in universities and other institutions in Great Britain.

Re-Establishment Credit

Applications for the use of their re-establishment credits were received from 79,056 veterans; 71,595 of these were approved, involving a total expenditure of \$12,677,809.

"An analysis of the use of this money shows the wisdom of the veterans in their expenditures and the real effect it will have on the future economy of our country."

Some 52,982 veterans spent \$10,732,478 on homes. Considering that \$4,910,992 of this amount was utilized for purchase and construction, and that the majority of cases represented down payments only, "it is safe to assume that over the past twelve months, Canadian veterans have committed themselves to approximately \$30,000,000 either for the purchase or construction of homes in Canada."

Veterans used \$1,161,703 for repair and modernization and \$4,669,783 for the purchase of furniture.

A total of 10,602 spent \$1,779,503 for the purchase of a business or for providing working capital for an already owned business or profession. An additional 6,910 veterans used \$1,064,652 for the purchase of tools, instruments or equipment for their trade or profession.

The remainder of the money was spent for the payment of premiums on Dominion of Canada insurance and for the purchase of special equipment for vocational or educational training.

Casualty Rehabilitation

During January, 1945, the Department of Veterans Affairs created within its Rehabilitation Branch a new section, known as the Casualty Rehabilitation Section. The duties of this Section are, in brief, to formulate and execute plans which will assist seriously disabled ex-service men and women to regain economic security, and in so doing, assist them to make maximum efficient use of existing services of rehabilitation.

Prior to the organization of the Casualty Rehabilitation Section, the Department, in co-operation with the Department of Labour, provided all the services which disabled veterans might need to accomplish their own rehabilitation. These services were those of medical treatment, provision and fitting of artificial appliances, such as limbs and hearing aids, financial protection, counselling and vocational guidance, vocational and educational training, and assistance in finding employment.

In January, 1945, the Casualty Rehabilitation Section had but an embryonic organization, and that in but five of the Departments, sixteen Districts; by December, 1945, there was a Casualty Rehabilitation Section organized in every District of the Department, and whose services are now available to every area in Canada.

The report states that, "a great deal of work lies ahead for this Section. Its organization and procedures must be expanded and improved. Of the some 25,000 Canadian veterans who suffered serious physical disability, many thousands are still in hospital, or on outpatient treatment, or still in the throes of readjustment. For these, employment must be found."

Many other thousands were discharged from Departmental care before the organization of this Section, and received their rehabilitation services from other sources within the Department.

The employment of amputees of this war provides a measure of the success of the rehabilitation program of the Department with respect to the seriously disabled. It is difficult to determine to what agency or person employment credit is due—it may be

particular employers or citizens, or the National Employment Service, or a Citizens' Committee, or a Veterans' Organization, or above all, probably, the men or women themselves. Almost fifty per cent of the nearly 2,000 amputees of this war are to-day employed, according to records, with placement reports improving every month. Of the remaining fifty per cent, many are still under treatment. Some are awaiting limbs, some are developing proficiency in their use, others are undergoing vocational training but some unfortunates are still unemployed.

"Working as they do to-day, under extreme pressure, and with all these tasks yet to be performed, the Casualty Rehabilitation Officers can point with pride to what has already been accomplished. What has been accomplished could not have been, were it not for the amazing qualities of independence, drive and determination to overcome all obstacles which the disabled veterans have themselves displayed."

Employment Situation

"Although the employment situation is serious at the present time, the anticipation of a slack period during reconversion has helped mitigate it, by provision of out-of-work benefits which veterans could use during the period that no suitable employment was available.

"With more than 40,000 veterans either in university, taking vocational training or in business or on farms on their own account, at the end of December last, it is significant that only 10,716 were in receipt of out-of-work benefits." During December only \$309,530 was paid out in out-of-work benefits, from a total veterans' rehabilitation expenditure of \$2,889,411.

Counsellor Training

In October, 1944, authority was granted for the establishment of a training school for in-service and ex-service Rehabilitation Counsellors as the need became cogently apparent. Candidates were selected from the three services, D.V.A. and Labour.

Over 1,200 candidates were trained over the year period of the scheme's existence in addition to some 700 Army Officers trained overseas during the summer of 1945.

The Ottawa school has been discontinued, but a series of miniature courses is being carried on in D.V.A. districts under the supervision of specially trained instructors.

Department of Veterans Affairs officials estimate that there will be paid out to veterans, or paid on their behalf, in tuition fees and purchase of land and improvements, etc., and costs of settlement under the Veterans' Land Act, a total of about \$596,000,000, during the coming fiscal year.

Army Employment—Civilian Jobs

THE rehabilitation of Canada's Army veterans is now facilitated by a recently released publication of the Department of National Defence (Army).

Entitled *Army Employment—Civilian Jobs*, a guide to civilian occupation related to Army employment, the 266-page publication contains descriptions of approximately 260 Army trades and non-trade specialties along with some twenty different civilian occupations related to each trade or non-trade specialty. In a forward, which is a timely message to Canadian Industry, General Crerar, speaking of the trades learned by our soldiers, draws employers' attention to the fact that "... all these trades and skills should be, and will be, of great value to these men and women in their civilian life, and particularly to you as their employers."

The publication was distributed to employers of 15 or more employees, to counsellors in the Army and the Department of Veterans Affairs, to placement officers of the National Employment Service, to Union officials, to citizens' committees on rehabilitation and to branches of the Canadian Legion.

The main purpose of the *Guide*, as set out in the introduction is to enable the above mentioned users of the book to suggest "... suitable new or alternative kinds of work for the following ex-service personnel:

- (a) Those who prefer their Army specialties to their former civilian occupations.
- (b) Those without civilian occupation prior to enlistment.
- (c) Those whose former occupation and/or civilian counterpart of their Army training is overcrowded.
- (d) Those desiring better postwar jobs by utilizing the skills acquired under Army training together with the skills which they had achieved in civilian life."

Army Employment—Civilian Jobs was prepared in the Department of Labour by members of the staff of the Occupational Research Division, Research and Statistics Branch. Each Army trade or non-trade specialty required to be defined, taking into consideration the following job elements: work done, materials used, tools used, machines and equipment used, knowledge and skills required. These definitions were prepared from basic information supplied by the Army. The next task consisted of listing a number of repre-

sentative civilian occupations that were related by their job elements to the Army trade studies. In the publication these occupations are grouped under three headings according to the amount of training required before the returned servicemen become proficient in them. These headings are: (1) occupations that do not require any additional training or require brief on-the-job training; (2) those that require some additional training; (3) those that require considerable additional training.

In order to illustrate more clearly the arrangement of the *Guide* and how it is used, a sample page is reproduced on the opposite page.

The first thing to note on this sample page is that the definition of the Army trade covers the duties of tradesmen in Army trade groups C, B, and A combined. The reason for this is that the work carried out by each group of tradesmen does not essentially differ except that Group C represents the apprentice or helper level of the trade; group B, the improver level; and group A, the journeymen level. This applies to all Army trades. The definition itself is in two parts, one describing the duties of the tradesman, the other, the special skills and knowledge he must possess.

The second section of the page is taken up by the related civilian occupations divided into three categories. "Brief on-the-job training" is required by the Driller (Diamond Setter) to become proficient in such jobs as Diamond-Drill Setter, Pneumatic-Tool Repairman, Pumpman, etc. "Brief additional training", along the lines indicated, is sufficient for entry into jobs like "Automobile or Diesel entry into jobs like Automobile or Diesel etc. Finally, with "considerable additional training", in special methods and techniques, this Army tradesman can become qualified for such occupations as Diamond Mounter, Jewel Setter, Mining Engineer, etc.

In the third section, *Related Fields of Work*, are listed broad fields of activities which offer additional choices of occupations.

Similar manuals have been published by the Navy, "Naval Rates—Their Meaning for Employers", and by the Air Force, "Employers' Guide".

Descriptions of the service trades in these manuals were based upon factual information gathered from branches of the Service responsible for the training programs. Information on related civilian trades was obtained through an extensive survey of industry.

DRILLER (DIAMOND SETTER) (ARMY TRADE GROUPS C, B, AND A)

Resets diamonds in bit of diamond drill and carries out repairs to drilling equipment: as diamonds become worn, chipped or lost, prepares head of drilling bit and sets in new diamonds; in repairing internal combustion engines, decarbonizes and grinds valves, replaces components requiring use of hand tools only, cleans and adjusts carburetors, adjusts clutches and swivelheads, replaces transmission, strips and reassemble chassis, replacing defective parts; makes adjustments to drive chains and sprockets; strips pump, replaces defective parts, and reassembles; removes and replaces liners to change working pressure and volume of pumps; carries out simple soldering; rebabbitts bearings; rethreads broken drill rods; carries out various tests to equipment; may supervise repairs to two or more drills.

Must be a qualified Driller (Diamond and Rotary). Must have good knowledge of working clearances allowed for correct fitting of engines, diamond drills, pumps, and auxiliary equipment. Must have good knowledge of core barrels and core recovery. Must be able to find way in remote districts, mainly by map and compass.

RELATED CIVILIAN EMPLOYMENT

Dictionary of
Occupational
Titles-Codes

I Occupations requiring brief on-the-job training:

CHURN-DRILL OPERATOR (bituminous coal mining; metal mining; non-metal mining; quarrying & sand & gravel)	5-75.240
DIAMOND-DRILL SETTER (bituminous coal mining; metal mining)	5-84.020
DIAMOND-DRILLER (bituminous coal mining; construction; metal mining)	5-75.410
MINER (V); Miner, Hard Rock (metal mining)	5-21.020
PIPE FITTER (construction)	5-30.010
PNEUMATIC-TOOL REPAIRMAN (any industry)	5-83.641
PUMP INSPECTOR (paper & pulp)	7-76.920
PUMPMAN (non-ferrous metal smelting & refining)	5-83.641
WELL-DRILL OPERATOR (construction)	5-75.230

II Occupations requiring brief additional training in performing and supervising unfamiliar drilling or cutting operations; or in all-around automotive repair; or in the operation and maintenance of power-driven equipment or engines:

AUTOMOBILE MECHANIC (automotive services)	5-81.010
DIESEL MECHANIC (any industry)	5-83.931
MACHINE MAN (bituminous coal mining)	5-21.210
PILE-DRIVER OPERATOR (construction)	5-23.610
PUMP SERVICEMAN (any industry)	5-83.641
ROTARY DRILLER (petroleum & natural gas production)	5-75.050
TOOL DRESSER (petroleum & natural gas production)	5-75.280

III Occupations requiring considerable additional training in watchmaking; or in the use of machine shop tools; or in methods of testing to determine the physical and chemical properties of metals or petroleum products; or in technique of surveying coal deposits and undeveloped mines:

DIAMOND MOUNTER (automobile manufacturing)	4-76.210
FORESTER, JUNIOR (governmental services)	0-38.01
JEWEL SETTER (clocks, watches & allied products)	6-72.128
LABORATORY SAMPLER (iron & steel)	0-50.22
MINING ENGINEER (bituminous coal mining; metal mining)	0-20.01
PROSPECT-DRILL PANNER (metal mining)	5-22.940
TESTER (petroleum refining)	0-50.34

Decisions of National War Labour Board

DURING the month of January the National War Labour Board issued decisions in the following cases:—

Canadian Brotherhood of Railway Employees and Other Transport Workers and Sydney and Whitney Pier Bus Service Limited, Sydney, N.S.

St. Lawrence Sea Products Company, Quebec, P.Q.

The Beaver Wood Fibre Company, Limited, The Beaver Company, Limited, Thorold, Ont., and International Brotherhood of Papermakers and International Brotherhood of Pulp, Sulphite and Paper Mill Workers.

Breton Construction Company, Municipal Spraying Construction Company, Limited, and Truck Owners and Drivers Union of Cape Breton, Sydney, N.S.

Metropolitan Life Insurance Company, Ottawa, Ont.

Aluminum Company of Canada Limited, and International Association of Machinists, Local 54 (A. F. of L.).

Canadian Brotherhood of Railway Employees and Other Transport Workers and Canadian National Railways and Canadian Pacific Railway Company.

Aluminum Company of Canada, Limited and United Steelworkers of America, Local 343.

Canso Steamship Company, Limited, Sydney, N.S.

Sun-Tested Wallpapers Limited, Toronto, Ont., and Paper Box and Specialty Workers' Union, No. 466.

Smith Hardware, Thos. J. Holland Company, Charles L. Hyde, Garn. E. Dobbs, and Howe and Hagerman Company.

Dalpe and Frere, Vercheres, P.Q., and J. A. Perreault, Sorel, P.Q.

C. Richardson and Company, Limited, St. Mary's, Ont., and Dairy Utensil Workers Union.

Lever Brothers Limited, Toronto, Ont.

Master Plumbers Association, Montreal, P.Q., and United Association of Journeymen Plumbers and Steamfitters, Local 144.

General Steel Wares Limited, and United Steelworkers of America, Local 2847.

Master Plumbers of Regina and United Association of Journeymen Plumbers and Steamfitters, Local 179.

Re: Canadian Brotherhood of Railway Employees and Other Transport Workers and Sydney and Whitney Pier Bus Service Limited, Sydney, N.S.

Reasons for Decision

This appeal is by the Union from the decision of the Nova Scotia Regional Board dated July 11, 1945. The Regional Board dismissed the Union's application for an order directing the Company to inaugurate a vacation with pay plan. The Regional Board concluded that it would not be in the interests of the Company or the employees to impose an additional financial obligation on the Company at the present time.

The Regional Board granted the Union leave to appeal to this Board.

The burden of the Company's submissions on appeal concerns a plea of inability to pay the amount required to put a vacation plan into effect. After careful examination of the evidence submitted by the Company on the point in question, we have come to the conclusion that the Company can absorb in its current operations the cost of such plan.

Having thus disposed of the grounds upon which the Regional Board's decision was rendered, we feel free to exercise the discretion conferred by the last paragraph of Section 20 (1) (c) of P.C. 9384.

The approved working conditions sought by the employees in this case are quite fair and reasonable. We think that the Company should be directed to put them into effect. Improved working conditions supported by proper labour-management relations invariably increase the productivity of the employees concerned and with consequent benefits to the employer.

In this case vacations with pay will be governed by the provisions of D.B. 17. It is impracticable to direct that the plan shall have effect for 1945. In the Finding and Direction to be issued in this appeal, provision will be made to have the plan effective from and after January 1, 1946.

January 8, 1946

Re: St. Lawrence Sea Products Company, Quebec, P.Q.*Reasons for Decision*

The Company appeals from a Finding and Direction of the Regional War Labour Board for Quebec dated August 13, 1945. In and by that Finding and Direction and with effect from July 1, 1945, the Company was ordered to increase wage rates to 30 cents an hour for all those of its hourly-rated employees at its La Tabatiere plant, who had been receiving less than that amount.

The employees are engaged in the work of extracting oil from cod livers and other similar sources, and in processing fish meal from fish refuse and seal carcasses. The operations are seasonal and the employees are recruited mainly from among those people whose chief source of livelihood is fishing.

The Company submits two grounds in support of its request that the Regional Board's decision be set aside. The first ground is that in fixing a single rate for all hourly-rated employees, all previously existing wage differentials are destroyed and the means of compensating employees for varying degrees of ability and responsibility are lost. The second ground constitutes a plea of inability to pay the increased rates.

We agree with the Company's argument on the first ground, but we hasten to say that some adjustments in the wage rates are justified under Wartime Wages Control Order 1943.

The second ground of the appeal is supported by financial statements covering operations

for the years 1941 to 1944, inclusive and for the first ten months of 1945. Those statements have been carefully examined. They show substantial increases in business done and in cost of raw materials used. Administrative expenses appear to fluctuate from year to year in line with the results of the operations and in any event would seem to be quite generous having regard to all the circumstances. The wage bill for direct labour has remained fairly constant throughout the period. Taking all matters into account we are of the opinion that the Company can assume some increases in wage rates.

Having disposed of the plea of financial inability to pay and having said that some adjustments in wage rates are justified we now propose to determine what those adjustments should be. Some of the employees are boys, some are adult factory labourers and others are men engaged in operations requiring varying degrees of skill. We are satisfied that an increase of 5 cents an hour will rectify existing injustices. The increase will apply to all the hourly-rated employees including the cooker and presses operators. The employees application before the Regional Board is broad enough to enable us to include the above named occupational classifications in the adjustments.

The appeal is allowed to the extent only that the Regional Board's decision will be varied so as to comply with the foregoing.

January 8, 1946.

Re: The Beaver Wood Fibre Company, Limited, The Beaver Company Limited, Thorold, Ont., and International Brotherhood of Papermakers and International Brotherhood of Pulp, Sulphite and Paper Mill Workers

Reasons for Decision

This is an appeal from a decision of the Regional War Labour Board for Ontario, dated September 7, 1945, in and by which decision the Regional Board rejected the joint application for increases in wage rates for employees in the occupational classifications of laminator, reclaim foreman, track man, chief electrician and chief steam engineer.

After considering the submissions in support of this appeal and, having regard for the restric-

tions contained in Section 20 (1) (a) of Wartime Wages Control Order, 1943, we are of the opinion that there has not been submitted to us sufficient evidence to justify this Board in disturbing the decisions of the Regional Board.

The appeal is therefore dismissed and there will be a Finding and Direction accordingly.

January 8, 1946.

Re: Breton Construction Company, Municipal Spraying Construction Company, Limited and Truck Owners and Drivers Union of Cape Breton, Sydney, N.S.

Reasons for Decision

This is an application by the Union for leave to appeal and appeal from a decision of the Regional War Labour Board for Nova Scotia

dated September 7, 1945. In and by that decision the Regional Board dismissed the application requesting an increase in rates for the owners of trucks and drivers from \$2 to \$2.50 per hour.

The Regional Board declined to grant leave to appeal to this Board because the parties had failed to indicate any grounds upon which the application for leave might be considered.

We have examined all the material filed with this Board, as well as that filed with the Regional Board. Nothing in those submissions indicates that the Regional Board erred in its

appreciation of the facts of the case or in its application of the law to those facts. In our view the Regional Board was right in refusing leave to appeal. The application to this Board for leave to appeal is dismissed. There will be a Finding and Direction accordingly.

January 8, 1946.

Re: Metropolitan Life Insurance Company, Ottawa, Ont

Reasons for Decision

With leave of the Regional War Labour Board for British Columbia the Company now appeals from a decision of that Board dated August 17, 1945, in and by which said decision the Board directed the Company to pay its agents the cost-of-living bonus required by certain general orders of this Board.

The Company contends that its agents, who are compensated by commissions only, are not "employees" within the meaning of Wartime Wages Control Order 1943, but are independent contractors.

We have examined the form of contract used by the Company in contracting for the services of those agents. We find that the terms of that contract respond in a positive way to all the well-known tests of agency. Having so found it follows that the relationship existing between the Company and its agents is that of principal and agent and not of master and servant.

The appeal is allowed and there will be a Finding and Direction revoking the decision of the Regional War Labour Board.

January 11, 1946.

Re: Aluminum Company of Canada Ltd. and International Association of Machinists, Local 54 (AFL)

Reasons for Decision

The Union representing certain employees at the Kingston plant of the Company applied to the Regional War Labour Board for Ontario for an order directing the Company:—

- (a) to pay $1\frac{1}{2}$ times regular rates for overtime and for work done on Sundays and on six statutory holidays;
- (b) to establish a standard work week of 44 hours;
- (c) to increase from 4 to 6, the number of statutory holidays, not worked, for which the employees concerned would be paid;
- (d) to pay night shift differentials;
- (e) to reduce from 7 to 5 years the qualifying period at the end of which an employee would become entitled to two weeks vacation with pay.

The Regional Board directed the Company to change the working conditions in respect of the statutory holidays, but rejected the other items in the Union's application. The Company obtained from the Regional Board leave to appeal against the said direction. The Union cross-appeals against the Regional Board's decision on items (a), (b), (d) and (e) above.

Soon after the Company commenced operations at the plant in 1941, management and the employees' representatives conducted negotiations on the issue of punitive rates for overtime. The payment of time and one-half regular rates was then suggested as a solution of the problem. The Company also suggested

the payment of regular rates for four statutory holidays not worked as a substitute for the punitive rates. At that time the negotiators for the employees represented the production workers, as well as employees in the various crafts in the plant. The employees instructed their negotiators to accept the holiday plan. That plan has continued in effect. Punitive rates, as such, have not been paid for overtime worked by the employees in the plant.

In 1944 the Union became the bargaining agents for the employees engaged in the various crafts in the plant and the United Steelworkers of America were later certified as the bargaining representatives of the production workers. Subsequently the Union made the application above referred to.

In this case we find a somewhat unusual situation wherein statutory holiday pay has been and is being used as an offset to any claim for punitive rates for overtime. The Company says that it would be willing to pay time and one-half for overtime if it was relieved of the duty to pay for statutory holidays. According to the evidence before us only a small proportion of the employees in the plant work overtime. To take away the condition relating to payment for statutory holidays would obviously be to the prejudice of the majority of the employees in the plant. We are not inclined to remove the condition. Even if we were so inclined we have no power to so order.

Until such time as the parties hereto mutually agree on a solution for the related problems of punitive rates for overtime and statutory holiday pay, matters will have to stand as they are. The evidence submitted in this appeal falls short of enabling us to offer a solution. We cannot emphasize too strongly the suggestion that the parties negotiate for the purpose of establishing an arrangement to provide means for compensating those employees who are called upon to work a greater number of hours of overtime than are worked by others.

The matter of reduction in the work week in this case is not one for determination by a War Labour Board, since the employees are hourly rated.

Having regard for all the circumstances, in this case we are of the opinion that it would not be fair or reasonable at this time to order an increase in the number of statutory holidays for which the Company must pay regular rates to its employees. The Regional Board's reason for having directed the increase seems

to have been "that the Company should be a little more generous". This can hardly be regarded as a good and valid reason under Wartime Wages Control Order, 1943.

Shifts are operated in the plant on a rotating basis. Moreover, it has not been shown that the payment of night shift differential is the established or prevailing practice, either in the industry in question or in other industries in the Kingston area. For these reasons we are not prepared to approve the request concerning such differentials.

This Board has never directed an employer to establish a vacation with pay plan calling for the payment of more than one week's pay. In the circumstances we do not propose to direct any change in the Company's rules now in effect governing the qualifying period for two weeks' vacation with pay.

The result of the foregoing is that the appeal is allowed and the cross-appeal dismissed. A Finding and Direction will issue accordingly.

January 14, 1946

Re: Canadian Brotherhood of Railway Employees and Other Transport Workers and Canadian National Railways and Canadian Pacific Railway Company

Reasons for Decision

This is an application by the Brotherhood to establish generally uniform compensation at punitive rates for work required to be performed on statutory holidays by employees covered by collective agreements at the following hotels owned and operated by the Railway Companies:—

Canadian National Railways—Chateau Laurier Hotel, Ottawa, Ont.; Prince Arthur Hotel, Port Arthur, Ont.; Fort Garry Hotel, Winnipeg, Man.; Prince Edward Hotel, Brandon, Man.

Canadian Pacific Railway Company—Royal Alexandra Hotel, Winnipeg, Man.; Saskatchewan Hotel, Regina, Sask.; Palliser Hotel, Calgary, Alta.; Empress Hotel, Victoria, B.C.

Canadian National Railways and Canadian Pacific Railway Company jointly—Hotel Vancouver, Vancouver, B.C.

It is our view that this is a type of case with regard to which this Board should not be asked to give a decision within the limitations imposed upon it by Wartime Wages Control Order, 1943, P.C. 9384. It is rather a matter for which the parties should seek a solution through the application of their experience in collective bargaining.

The records of the Board indicate that there are approximately 2,800 employees engaged at the respective hotels who are covered by

collective agreements and of these only a relatively small number now enjoy privileges involving extra compensation or compensating allowance of time off for work required to be performed on statutory holidays. The Union bases its case on the extension of such provisions as are now made for the relatively small group, and as established for certain occupational classifications engaged in direct Railway service covered by collective agreements, to other occupational classifications engaged in the service of the respective hotels who have not heretofore enjoyed such privileges.

The operation of hotels on statutory holidays, as on other days, is a necessary service to meet the requirements of the public and it does not appear to us to be fair and reasonable or consistent with the intent of Wartime Wages Control Order that an employer should be penalized by requiring payment of a punitive rate for work performed by employees on holidays when such work cannot reasonably be avoided. On the other hand, it might be fair and reasonable that employees required to work on certain specified statutory holidays to meet the requirements of necessary service to the public, within a stated time following any such holiday (sufficient over the period to relieve those involved without incurring punitive payments), should be allowed a day off in lieu thereof and, if such day off duty

is not arranged, that compensation on some reasonable basis should be allowed for work performed on the holiday.

However, the provisions of Wartime Wages Control Order, 1943, P.C. 9384, do not set up this Board as a Fair Wage Board or to regulate the working conditions of employees in industry. The purposes of the Order, among other things, is to stabilize the wage structure in Canada and to provide machinery for the orderly rectification of gross inequalities and gross injustices. Within these limitations the powers of the Board are set out in Section 20 and in our view, in the rectification of such gross inequalities and gross injustices, we must confine ourselves to the pattern either as to wage rates or working conditions as these may be reflected by established practice within a particular industry—in the present case the

hotel industry. In dealing with the present application we do not think we are empowered to consider the particular pattern of practice as it may have been developed in respect of direct Railway employees or workers in any other industry.

On the basis submitted the application of the Brotherhood must be disallowed.

It was stated at the hearing of the case that a conglomeration of practices in respect of pay or other allowances for work on statutory holidays existed within the hotel industry and it may be that on further discussion of the matter between the parties they can develop information which will enable them to agree upon a joint submission to establish suitable conditions within the limitations indicated herein.

January 14, 1946.

Re: Aluminum Company of Canada Limited, and United Steelworkers of America, Local 343

Reasons for Decision

With leave of the Regional War Labour Board for Ontario, the Company appeals from a decision of that Board dated September 24, 1945. In that decision the Regional Board directed the Company to increase from 4 to 6, the number of paid statutory holidays for the employees of the Kingston Works of the Company who are represented by Local Union 343.

In another decision of even date and concerning this Company, we dealt with the same issue as that involved in this case. The facts

of this case so nearly resemble those of the other case as to make it necessary for us to come to the same conclusion herein; namely, that it would not be fair or reasonable to direct the Company to increase the number of paid statutory holidays for the employees concerned in this case.

There will be a Finding and Direction allowing the appeal and varying the direction of the Regional War Labour Board accordingly.

January 14, 1946.

Re: Canso Steamship Company Limited and Margaree Steamship Company Limited, Sydney, N.S.

Reasons for Decision

This is an application for leave to appeal and appeal from two decisions of the Nova Scotia Regional Board dated September 4, 1945. The decisions made lawful from said date, the wage rates and war risk bonuses paid without Regional Board's authority, to officers and members of the crews of the S.S. *Surf* and of the motor vessels *National II* and *Arev*.

The appellants urge that the decisions have retroactive effect. In the case of the *Surf* they request that the effective date be March 13, 1944, and in the cases of *National II* and *Arev*, July 4, 1944, or, failing that, October 31, 1944.

The appellants have indicated good and sufficient reasons why the application for leave to appeal should be approved.

We consider it advisable to review the facts of each case.

The Canso Company owns the *Surf* and on March 13, 1944, the Company applied to the National Board for authority to pay certain wage rates and war risk bonuses to the officers and crew members of that ship. The National Board advised the Company that the application should be made to the Regional Board. Moreover the Company was then warned that it was carrying on in violation of P.C. 9384. The Company delayed filing its application with the Regional Board until August 9, 1945, although, it is noted, the application is dated January 6, 1945. No satisfactory explanation is given for the delay. We are, however, of the opinion that the Regional Board should have made its decision effective from the date when it received the application and we allow the appeal to that limited extent.

At all times material to this case the Margaree Company owned the M.V. *National II* and M.V. *Arev*. On July 4, 1944, this Com-

pany was required to inaugurate a freight, mail and passenger service between Arichat and Mulgrave. *National II* plied in that service from July 4 to October 16, 1944. From the latter date M.V. *Arev* was used for the purpose. On November 1, 1944, the Company, by letter, advised the Regional Board of the inauguration of the service and of the wage rates and war risk bonuses it was paying to the employees on the vessels. The Regional Board did not consider the letter as an application for approval of the rates and bonus. Several communications passed between the Company and the Regional Board. Finally and on August 9, 1945, a proper application was submitted to the Regional Board. The application is dated January 6, 1945.

With much respect, we are of the opinion that the Regional Board should have regarded all the communications including the letter

of November 1, 1944, as part of the case concerning *National II* and *Arev*. At any rate we so regard them and propose to allow the appeal of the Margaree Company to the extent that the Regional Board's Finding and Direction shall be effective from and after November 1, 1944.

There is another matter which should be rectified even though it is not at issue in this appeal. It appears that in fixing wage rates for the employees in question, the Regional Board incorporated the war risk bonus with what is recognized as the proper rates for the occupational classifications concerned. The two elements of compensation should not be merged but should be kept separate one from the other.

There will be a Finding and Direction giving formal effect to these Reasons for Decision.

January 8, 1946.

Re: Sun-Tested Wallpapers Limited, Toronto, Ont., and Paper Box and Specialty Workers Union, No. 466

Reasons for Decision

With leave of the Regional War Labour Board for Ontario the Company and the Union join in an appeal from a decision of that Board dated October 23, 1945. By that decision the Regional Board authorized the employer to pay a night shift premium of 5 cents an hour. The employer had asked for authority to pay a premium of 10 per cent over the regular rates to all employees required to work at night.

The appellant asserts that the printing of wallpaper, being the business of the employer appellant, is similar to other types of printing. The employer's list of job titles indicates that at least a substantial number of the employees concerned in this appeal can properly be classified as being in the printing trade. It is also shown that the employees who will be called upon to work at nights are in those classifications which are known to the printing industry.

For many years it has been the practice in

the printing industry in Toronto to pay a premium on a percentage basis to employees required to work on night shifts. Through collective bargaining processes the parties have agreed to request permission to introduce the practice into the employer's plant. Having regard for all material circumstances in the case, it is our view that the request is fair and reasonable and is consistent with and will give effect to the purposes of Wartime Wages Control Order, 1943.

We allow the appeal and authorize the employer to pay a premium not exceeding 10 per cent over the regular rates to all employees required to work on the night shift. The authorization shall have effect from and after October 23, 1945. The premium shall not be incorporated into wage rates for the purpose of calculating overtime pay.

There will be a Finding and Direction accordingly.

January 21, 1946.

Re: Smith Hardware, Thos. J. Holland Company, Charles L. Hyde, Garn. E. Dobbs, and Howe and Hagerman Company

Reasons for Decision

This is an appeal by and on behalf of six Master Plumbers doing business in the City of Belleville in the Province of Ontario from an order of the Ontario Regional War Labour Board directing said employers to establish and pay a wage rate of 95 cents an hour to all journeymen plumbers, steamfitters, and sheet metal workers effective as and from the 1st day of October, 1945.

These firms do a combined contracting and plumbing repair business and their present rate for the above classification is approximately 80 cents per hour. The Master Plumbers charge-out rates for service of this classification is \$1 per hour with the possible exception of Howe and Hagerman Company whose charge-out rate appears to be \$1.25 per hour.

We are satisfied that a gross inequality existed in respect of the wage rates in effect

prior to the Regional Board's decision and we cannot find any manifest error in the decision of the Regional Board in fixing the rates at 95 cents an hour.

However, the effective date of this order merits further consideration. The Master Plumbers affected urge their inability to carry on business under the present price ceiling for their services and at the same time pay the wage rate as ordered. With this contention the Board is in agreement. The Master Plumbers were advised that for reasons which it is not necessary to elaborate upon here, it was necessary for them to obtain a decision from the National Board in this regard. They have continued to operate on their former

wage schedule pending the disposition of the appeal by this Board. Inasmuch as their contracts were entered into and their repair work done by them and paid for by their customers on the basis of the prevailing ceiling price, it would not seem fair or reasonable to require the Master Plumbers to meet a new wage rate for contracts and repair work already completed and paid for.

The appeal will be dismissed, except that the effective date for the wage rate as set forth in the Finding and Direction of the Regional War Labour Board will be changed from October 1, 1945, to February 15, 1946.

January 29, 1946.

Re: Dalpe and Frere, Vercheres, P.Q., and J. A. Perreault, Sorel, P.Q.

Reasons for Decision

This is an appeal from a decision of the Regional War Labour Board for Quebec, dated October 18, 1945.

The Appellant, Mr. J. A. Perreault, holder of diplomas granted in conformity with the Dairy Industry Act for Quebec (R.S.Q. 1941, Chap. 126) made a complaint to the Regional Board that his former employer, Dalpe and Frere, Vercheres, P.Q., "had dismissed him without reason and did not treat him according to the Act. He did request an inquiry into the matter."

The Regional Labour Board referred the complaint to the Minimum Wage Commission. The Commission conducted an inquiry and reported that the complaint was ill-founded. The Regional Board, following that report, made the decision under appeal.

It appears from the material on file and from the reading of the Regional Board's decision that considerable time has been spent to find out whether the appellant had been fairly treated by his employer. However, it appears that the Regional Board has forgotten the only thing that had to be done was to ascertain whether wage rates had been paid in accordance with the Wartime Wages Control Order, 1943.

The evidence shows that Mr. Perreault was engaged by Dalpe and Frere in August, 1940, at a rate which varied from \$15.00 a week to \$35.00, plus a bonus. On November 15, 1941, Mr. Perreault's classification was "cheese maker" and his salary \$25.00 a week.

No authorization has been given by the Regional Board to alter the appellant's basic

salary or change his classification. It is quite clear that the agreements made after November 15, 1941, in connection with the appellant's salary were illegal and violated the provisions of the Order, P.C. 9384.

That was the only question to be decided by the Regional Labour Board. It had no competency or duty to find out and decide whether or not the plaintiff had received the wages agreed between both parties. The Regional Board had all the reasons to refrain from giving any such decision because the evidence shows that the agreements in connection with the appellant's wages, made after November 15, 1941, were without authorization and in contravention of the Order which the Regional and the National Boards have to apply and make effective.

The Regional Board's Finding and Direction should be modified: (a) in order to delete from said Finding and Direction any commitment on the right that the parties may have to claim from one another the salary overpaid or the salary due and not paid; (b) by replacing the conclusions of the said Finding and Direction by the following:—

During the basic period, to wit: the 15th November, 1941, Mr. Perreault the appellant, was working for the defendant as a "cheese maker" at a wage rate of \$25.00 a week. No authorization has been given by the proper authority to alter or modify the said terms of employment except by adding to the basic salary the cost-of-living bonus. The employer violated the said Order by altering the said terms of employment in effect during the basic period.

February 1, 1946.

Re: C. Richardson and Company, Ltd., St. Mary's and Dairy Utensil Workers Union

Reasons for Decision

This is an appeal by the Company from an order made by the Ontario Regional Board granting an increase to certain of its employees.

The Company pleaded inability to pay. During the argument it became apparent that the schedule as ordered by the Ontario Board did not include all the classifications in the

employ of the Company, and in particular made no reference to piece workers. It was also apparent that the parties to this appeal had made little or no attempt at collective bargaining.

The Union had made its demand and the Company had rested its reply on its plea of inability to pay. The Board is satisfied that the best results could be obtained if the Union and Management were to sit around and agree upon a job classification and upon job evaluation as far as possible. The Company filed financial statements in support of its plea of inability to pay and the accountant endeavoured to explain these statements. The

statements and the conclusions drawn therefrom were manifestly in error and Mr. Calvin as counsel for the Company agreed to file supplementary statements showing the true financial position of the Company and what wage increases already ordered would mean in increased payrolls to the Company.

To afford the Union and Management an opportunity to get together and likewise to permit the filing of new or supplementary financial statements this Hearing will be adjourned for a period of 60 days from the date of Hearing, i.e. January 11.

January 29, 1946.

Re: Lever Brothers Limited, Toronto, Ont.

Reasons for Decision

The Company and the Union made a joint application to the Ontario Regional War Labour Board for approval of a job classification and a job evaluation for the employees engaged in the Company's plant at Toronto. The application was refused and from such refusal both the Company and the Union appeals to this Board.

The rates of pay in this plant are not low, and in fact, are somewhat higher than the rates in any comparable industry in the Toronto area. For this reason, it cannot be said that any gross injustice or gross inequality exists. However, during the last two years both the Company and the Union have carefully studied their wage structure and found anomalies not only in classification but in the rates of pay. Some are alleged to be too low while others are too high, involving a

decrease in the rate presently paid and the parties to this appeal claim that these amount to a gross inequality within the meaning of the Wages Control Order. These anomalies apparently arise from a job classification and evaluation effected in 1943.

To give effect to this new application and its associated rates of pay would, in the opinion of the Board, have a very disturbing effect upon the whole wage structure of the Toronto area. To give effect to any part of it would only serve to create new differentials, new anomalies, with a result possibly worse than that which is now alleged to exist.

The Board cannot find that the Ontario Regional Board exercised its discretion in refusing the order on any wrong principle and the appeal will therefore be dismissed.

January 29, 1946.

Re: Master Plumbers Association, Montreal, P.Q., and United Association of Journeymen Plumbers and Steamfitters, Local 144

Reasons for Decision

This is an appeal by the Union from a decision of the Quebec Regional War Labour Board refusing the Union's application for a general increase from \$1.01 per hour to \$1.15 for all journeymen plumbers employed in the City of Montreal. By a comparison with the rates paid in Toronto, Windsor, Winnipeg, and Vancouver, the Union endeavoured to show that the prevailing rate in Montreal amounted to a gross injustice insofar as every plumber employed in Montreal was concerned. The Board cannot agree that such a comparison is a proper one.

In any event, there is a wide divergence of rates paid not only as between the cities

referred to but in each of the said cities, whereas the one rate is paid by all Master Plumbers in the City of Montreal. This rate is higher in Montreal than elsewhere in the Province of Quebec.

The Building Trades Joint Committee supervises and enforces approved rates of pay for all the building trades in the City of Montreal.

The Board is of the opinion, that no grounds exist for interfering with the discretion exercised by the Quebec Regional Board in arriving at its decision.

The appeal will be dismissed.

January 29, 1946.

**Re: General Steel Wares Limited and United Steelworkers of America,
Local 2847**

Reasons for Decision

This is an application by the Company for leave to appeal and appeal from a Finding and Direction of the Regional War Labour Board for Quebec dated July 24, 1945. In that Finding and Direction the Regional Board directed the Company to increase wage rates for the employees in its Montreal plant engaged in the occupational classifications named in the schedule attached thereto.

The directed wage rates are set forth in the schedule. In the Finding and Direction reference is made to wage rates paid in the Toronto plant of the Company. The Regional Board's Finding and Direction indicates a desire on the part of that Board to have the Montreal rates equal to those in the Toronto plant. After reading the Finding and Direction one is entitled to assume that the Regional Board did not have definite evidence before it showing the wage rates actually paid in the Toronto plant. This seems evident from the provision of the Finding and Direction which reads as follows:—

and consequently orders and directs General Steel Wares Limited to pay the rates as per schedule attached hereto into effect, excepting where any rate mentioned thereon would be higher than that paid by the Company in its Toronto plant.

In our view such a provision lacks finality. Who is to determine whether the job content in any task for an occupational classification in one plant is the same as that of an occupational classification in the other. Unless it can be shown that the job content is the same in such a case it would be improper to direct equal rates. Further one may ask what rate is to be paid to an employee in any classification for which rates have been directed at an amount higher than the rate presently in effect for the same or substantially similar classification in the Toronto plant.

The Company has, in our opinion, given ample reasons in support of its application for leave to appeal and we grant such leave.

It is our opinion that there was not sufficient evidence before the Regional Board to warrant the direction made in this case. In any application for wage increases under Wartime Wages Control Order, 1943, it is not only necessary to produce evidence of a gross injustice or inequality, but it is also necessary to indicate clearly the extent to which a Board must go in increasing the wages in order to rectify the injustice or inequality. Such evidence is lacking in this case.

We will allow the appeal and there will be a Finding and Direction accordingly.

January 25, 1946.

**Re: Master Plumbers of Regina and United Association of Journeymen
Plumbers and Steamfitters, Local 179**

Reasons for Decision

This is an application for leave to appeal and appeal from a Finding and Direction of the Regional War Labour Board for Saskatchewan dated June 29, 1945, wherein the Board refused to increase the wage rates to plumbers from \$1.06 per hour to \$1.20 per hour. Leave to appeal was refused by the Regional Board.

The Union based its application on two principal grounds, namely, the agreement signed between the parties in 1942 by which the master plumbers agreed to pay \$1.10 per hour which agreement was disallowed by the Wartime Prices and Trade Board, and secondly, that the master plumbers were paid \$1.25 per

hour in 1930. Unfortunately, these facts cannot be accepted by the National War Labour Board as evidence of gross inequality or gross injustice.

After reading the appellant's brief and rebuttal herein and after hearing representatives of the Company, as well as of the Union, we have come to the conclusion that there was not sufficient evidence placed before us to justify our finding that the Regional Board erred in its decision.

The appeal is consequently dismissed and there will be a Finding and Direction accordingly.

January 31, 1946.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with proceedings under the National War-time Labour Relations Regulations and with proceedings under the Conciliation and Labour Act and other legislation.

The articles on strikes and lockouts, formerly included in this section, may be found elsewhere in this issue.

Under the War-time Labour Relations Regulations, P.C. 1003, the Government has extended its jurisdiction over employer-employee relations which are normally exclusively within the provincial field to the extent considered necessary to cover adequately employers and employees in industries "essential to the efficient prosecution of the war", but without attempting to include other industry which has not a direct bearing on war production. In so far as these latter industries are concerned, each province can make its own decision as to whether or not they shall be brought under the Regulations.

Agreements have been made under the

Regulations between the Dominion and every province except Alberta and Prince Edward Island providing for the setting up of provincial agencies for the administration of the Regulations.

The work of the War-time Labour Relations Board (National) is here described in two separate articles. The first deals with applications made by unions for certification and their disposition by the Board; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also carried on by the Industrial Relations Branch of the Department of Labour under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned; and under P.C. 4020.

Applications for Certification Under the War-time Labour Relations Regulations

THE War-time Labour Relations Board (National) met for three days during the month of January. During the month, the Board received four applications, held seven hearings, issued ten certificates designating bargaining representatives, rejected three applications, ordered two representation votes, and allowed the withdrawal of one application.

Certificates Issued

Following an investigation of the application by an officer of the Board, bargaining representatives as stated were certified in the following cases:—

1. Messrs. J. M. Smith, Harry Sipes, J. A. Sullivan, Dewar Ferguson and C. E. Lenton and the *Canadian Seamen's Union* for the unlicensed personnel employed in the deck, engineroom and Steward's departments on vessels operated by the *Pacific Coyle Navigation Company, Ltd., Vancouver, B.C.* Masters,

mates and engineers were excluded from the bargaining unit.

2. Messrs. A. R. Mosher, H. A. Chappell, W. Allan and J. H. Ross and the *Canadian Brotherhood of Railway Employees and Other Transport Workers* for the employees of the *Canadian Pacific Railway Company*, in its Heat, Light and Power Department and the Repair and Maintenance Department of its *Banff Springs Hotel, Banff, Alberta*. The chief engineer was excluded from the bargaining unit.

3. Messrs. A. R. Mosher, J. E. McGuire, W. J. Smith, R. Leclaire, L. Forget, G. Lachaine, L. Lemaire, Lucien Lemaire and B. Collard and the *Canadian Brotherhood of Railway Employees and Other Transport Workers* for the Captains and Assistant Captains of Red Caps and Red Caps employed by the *Canadian National Railways* in its *Central Station, Montreal, P.Q.*

4. Messrs. A. P. Randolph, Bennie Smith, J. B. Bowden, H. M. Walker and A. R. Blanchette and the *Brotherhood of Sleeping Car Porters* for the porters employed on sleeping car, parlour and composite cars operated by the *Northern Alberta Railways Company, Edmonton, Alberta.*

5. Messrs. W. A. Rowe, Charles Davison and J. M. Rosevear and the *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees* for the Captains and Assistant Captains of Red Caps and Red Caps employed by the *Toronto Terminals Railway Company, Toronto Union Station, Toronto, Ontario.*

6. Messrs. Stanley Eighteen, Clarence N. Magee, Vern Calkins and Elroy Robson and the *Canadian Brotherhood of Railway Employees and Other Transport Workers* for the truck drivers employed in the collection, carriage and delivery of freight and express in highway service by *Canadian National Cartage Services, Canadian National Railways at Oshawa, Belleville, Picton, Ontario and Yarmouth, Nova Scotia.*

Following an investigation of the application by an officer of the Board and a representation vote ordered by the Board, bargaining representatives as stated were certified in the following cases:—

1. Messrs. J. M. Smith, Harry Sipes, J. A. Sullivan, Dewar Ferguson and C. E. Lenton and the *Canadian Seamen's Union* for the unlicensed crew members employed in deck, engine room and Steward's departments of all vessels operated by the *Marpole Towing Company Limited, Vancouver, B.C.* Masters, mates and engineers were excluded from the bargaining unit.

2. Mr. E. J. Burman and the *Brotherhood of Railroad Signalmen of America* for the employees in extra gangs in the Signal Department of the *Canadian National Railways System, Montreal, P.Q.*, in the classifications of signal foremen, signal maintainers, signal mechanics, assistants and helpers.

3. Messrs. J. M. Smith, Harry Sipes, J. A. Sullivan, Dewar Ferguson and C. E. Lenton and the *Canadian Seamen's Union, Pacific Coast District*, for the unlicensed personnel engaged on vessels of the *Young and Gore Tug Boat Company Limited, Vancouver, B.C.* Master, mates and engineers were excluded from the bargaining unit.

Following an investigation of the application by an officer of the Board and a public hearing, bargaining representatives as stated were certified in the following case:—

Messrs. E. C. Shephard, E. Barlow and William Bailey and the *Order of Railway*

Conductors for the road train conductors employed by the *Toronto, Hamilton and Buffalo Railway Company, Hamilton, Ontario.*

Applications for Certification Rejected

1. *Canadian Seamen's Union and Gulf of Georgia Towing Company Limited, Vancouver, B.C.* (L.G., Oct. 1945, p. 1459). Following an investigation of the application and a representation vote ordered by the Board, the Board decided to reject the application as the applicant union failed to obtain the support of the majority of the employees affected as required by the Wartime Labour Relations Regulations, P.C. 1003.

2. *Brotherhood of Railroad Trainmen and Temiskaming and Northern Ontario Railway, North Bay, Ontario* (L.G., Dec., 1945, p. 1789). Following an investigation of the application, a public hearing and a representation vote ordered by the Board, the Board reached the decision that the application should be rejected as the applicant union failed to obtain the support of a majority of the employees affected as prescribed by the Regulations.

3. *Brotherhood of Railroad Trainmen and Toronto, Hamilton and Buffalo Railway, Hamilton, Ontario.* (L.G., Oct. 1945, p. 1459). Following an investigation of the application, a public hearing and a representation vote ordered by the Board, the Board decided to reject the application as the applicant union failed to obtain the support of the majority of employees affected as required by the Wartime Labour Relations Regulations, P.C. 1003.

Application Withdrawn

International Longshoremen's and Warehousemen's Union, Local 501 and Great Northern Railway Company, Vancouver, B.C. (L.G., Jan., 1946, p. 39). On the request of the representative of the applicant union the application for certification of bargaining representatives was withdrawn.

Representation Vote Ordered

1. Following a hearing of an application for certification of bargaining representatives submitted by the *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees*, the Board ordered that a representation vote be taken of certain clerical employees in the District Accountant's office of the *Canadian Pacific Railway Company, Moose Jaw, Saskatchewan*, Mr. R. H. Hooper, Industrial Relations Officer, Winnipeg, Manitoba, was appointed Returning Officer for the purpose of taking the vote.

2. Following consideration of an application for certification of bargaining representatives submitted by the *Canadian Seamen's Union* the Board ordered that a representation vote be taken among the unlicensed crew members in deck, engine room and Steward's departments on all vessels operated by *Cliff M.R. and B.C. Mills Towing Company Limited, Vancouver, B.C.* Mr. G. R. Currie, Industrial Relations Officer, Vancouver, B.C., was appointed Returning Officer for the purpose of taking the vote.

Applications Under Investigation

1. *Canadian Brotherhood of Railway Employees and Other Transport Workers* on behalf of Clerks and Stenographers, employed

in the Passenger Traffic Department of the *Canadian National Railways, Moncton, N.B.*

2. *Canadian Seamen's Union* on behalf of the unlicensed personnel employed on vessels owned and/or operated by *Branch Lines Limited, Montreal, P.Q.*

3. *Order of Railway Conductors*, on behalf of road train conductors, employed by the *Temiskaming and Northern Ontario Railway, North Bay, Ontario.*

4. *Canadian Radio Officers' Association, Pacific and Atlantic Districts (Locals 4 and 5) Canadian Section, Marine Department (A.C.A.-C.I.O., C.C.L.)* on behalf of Radio Officers employed on dry cargo vessels operated by *Park Steamship Company, Limited, Montreal, P.Q.*

Conciliation Proceedings Under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Regulations provide conciliation machinery to attempt settlements of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the Minister of Labour by the Wartime Labour Relations Board (National) or by the Provincial Board in their respective jurisdictions. A Conciliation Officer is then appointed to confer with the parties and endeavour to effect an agreement. If the Conciliation Officer is unable to bring about settlement of the matters in dispute and reports that in his view an agreement might be facilitated by the appointment of a Board of Conciliation, a Board is then established by the Minister of Labour. The duty of such a Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

Assignment of Conciliation Officers

During January, 1946, Conciliation Officers have been assigned to confer with the parties in an attempt to effect an agreement in the following cases:

George Weston Bread and Cakes Ltd., Toronto, Ont., and Local 847, Bakery Wagon Drivers & Warehousemen's Union, (A.F.L.-T.L.C.)—F. J. Ainsborough, Conciliation Officer.

Dominion Wheel & Foundries Ltd., St. Boniface, Man., and Local 174, International

Moulders' & Foundry Workers' Union of North America (A.F.L.-T.L.C.)—Thos. Williams, Conciliation Officer.

Railway Association of Canada, Montreal, P.Q. and Division No. 4, Railway Employees' Dept. (A.F. of L.)—J. S. McCullagh, Conciliation Officer.

Swift Canadian Company, Ltd., Stratford, Ont., and Local 307, United Packinghouse Workers' of America, (C.I.O.-C.C.L.)—William Dunn, Conciliation Officer.

J. B. Smith Lumber Company, Strachan Ave., Toronto, and Local No. 1487, United Brotherhood of Carpenters and Joiners, (A.F.L.-T.L.C.)

White Circle Co., Ltd., Sydney, N.S., and Sydney Dry Cleaning & Laundry Workers' Union (C.C.L.)—M. A. MacDonald, Conciliation Officer.

General Steel Wares, Ltd. (Toronto and London plants) and Locals 1111 and 2771, United Steelworkers' of America, C.I.O.-C.C.L.)—F. J. Ainsborough, Conciliation Officer.

Hamilton Cotton Company Limited, Hamilton, Ont., and Local No. 26, Textile Workers' Organizing Committee. (C.C.L.) F. J. Ainsborough, Conciliation Officer.

Lundy Steel Products Limited, Toronto, 1, Ont., and Local No. 3, Federation of Industrial Workers (C.C.L.)—G. R. Fenwick, Conciliation Officer.

Cosmos Imperial Mills, Ltd., Hamilton, Ont., and Local 28, Textile Workers' Organizing Committee (C.C.L.)—William Dunn, Conciliation Officer.

Ontario Steel Products Co., Ltd., Gananoque, Ont., and Local 3209, United Steelworkers' of

America (C.I.O.-C.C.L.) — James Hutcheon, Conciliation Officer.

Canadian Industries Ltd. (Windsor Works), Windsor, Ont., and Local 195, International Union, U.A.A.I.W.A. (U.A.W.-C.I.O.) — William Dunn, Conciliation Officer.

Victoria Tug Co., Victoria, B.C., and Canadian Seamen's Union, Pacific Coast District (T.L.C.)—G. R. Currie, Conciliation Officer.

Agreements Facilitated by Conciliation Officers

In the following cases, reports were received from Conciliation Officers indicating the successful completion of negotiations, and the signing of an agreement:—

Consumers' Co-operative Refineries Ltd., Regina, Sask., and Local No. 1, Oil Workers' Industrial Union (C.C.L.)—H. S. Johnstone, Conciliation Officer.

White Circle Co., Ltd., Sydney, N.S. and Sydney Dry Cleaning and Laundry Workers' Union (C.C.L.)—M. A. MacDonald, Conciliation Officer.

Firestone Textiles, Ltd., Woodstock, Ont., and United Textile Workers' of America (A.F.L.-T.L.C.) Stratford, Ont. — William Dunn, Conciliation Officer.

Swift Canadian Company, Ltd., Stratford, Ont., and Local 307, United Packinghouse Workers' of America (C.I.O.-C.C.L.)—William Dunn, Conciliation Officer.

Boards Established

During January Boards of Conciliation were established but not fully constituted as follows:

Robbins and Myers Co., of Canada, Limited, Brantford, Ont., and International Union, U.A.A.I.W.A. (U.A.W.-C.I.O.)

Cosmos Imperial Mills, Ltd., Hamilton, Ont., and Local 28, Textile Workers' Organizing Committee (C.I.O.-C.C.L.)

Corrugated Paper Box Company Limited (Cartons Specialty Ltd.), Leaside, Ont., and Local No. 466, Paper Box & Specialty Workers, (T.L.C.)

Boards Fully Constituted

During January Boards of Conciliation were fully constituted as follows:

Holden Building (William Holden, Esq.) Vancouver, B.C.—The Board of Conciliation established to deal with a dispute between Holden Building (William Holden Esq.) and Local No. 244, Building Service Employees' International Union, was fully constituted on January 22, 1946, with the appointment of Mr. J. F. Keen, Vancouver, B.C., as Chairman of the Board, by the Minister of Labour, in

the absence of a joint recommendation from the other two members of the Board. Messrs. B. Warfield and W. K. Gervin, each of Vancouver, were appointed on the nomination of the employer and employees respectively.

Hudson's Bay Company, Inc., Victoria, B.C.—The Board of Conciliation established to deal with a dispute between the Hudson's Bay Co., Inc., and Local 279, Retail Clerks' International Protective Association, was fully constituted on January 8, 1946, with the appointment of J. H. Harman, as Chairman of the Board, by the Minister of Labour, in the absence of a joint recommendation from the other two members of the Board. Mr. B. Patterson, and Mr. J. P. Simon, each of Victoria, B.C., were appointed on the nomination of the employer and employees respectively.

Frost Steel & Wire Co., Ltd., Hamilton, Ont.—The Board of Conciliation established to deal with a dispute between Frost Steel & Wire Company Limited, and Local 3561, United Steelworkers' of America, was fully constituted on January 8, 1946, with the appointment of His Honour Judge E. Lovering, Toronto, as Chairman of the Board, by the Minister of Labour, in the absence of a joint recommendation from the other two members of the Board. Messrs. E. Macaulay Dillon, and Mr. Fred Dowling, each of Toronto, were appointed on the nomination of the employer and employees respectively.

Vancouver Block (Mrs. L. Manford) Vancouver, B.C.—The Board of Conciliation established to deal with a dispute between Vancouver Block, (Mrs. L. Manford) and Local 244, Building Service Employees Union, was fully constituted on January 30, 1946, with the appointment of Mr. J. F. Keen, Vancouver, B.C., as Chairman of the Board, by the Minister of Labour, in the absence of a joint recommendation from the other two members of the Board. Messrs. D. McKenzie and J. Price each of Vancouver, were appointed on the nomination of the employer and employees respectively.

Pacific Cafe, New Westminster, B.C.—The Board of Conciliation established to deal with a dispute between Pacific Cafe and Local 28, Hotel and Restaurant Employees Union was fully constituted January 24, 1946, with the appointment of Mr. J. E. Eades, Vancouver, as Chairman of the Board, by the Minister of Labour, in the absence of a joint recommendation from the other two members of the Board. Messrs. W. M. Gilchrist, New Westminster, B.C., and T. E. Parkin, Vancouver, B.C., were appointed on the nomination of the employer and employees respectively.

Canadian Industries, Ltd., Toronto, Ont.—The Board of Conciliation established to deal with a dispute between Canadian Industries, Limited, and District 50, United Mine Workers' of America, was fully constituted on January 29, 1946, with the appointment of the Honourable Mr. Justice W. D. Roach, Toronto, Ont., Chairman of the Board, appointed on the joint recommendation of the other two members of the Board. Messrs. Gerald H. Brown, Ottawa, and Herbert Orliffe, Toronto, were appointed on the nomination of the employer and employees respectively.

Cranbrook Cartage & Transfer Co., Cranbrook, B.C.—The Board of Conciliation established to deal with a dispute between Cranbrook Cartage & Transfer Company, and Local 1-405, International Woodworkers' of America, was fully constituted on January 7, 1946, with the appointment of Mr. C. J. Little, Cranbrook, B.C., as Chairman of the Board, who was appointed on the joint recommendation of the other two members of the Board. Messrs. J. M. Falkins, Cranbrook, B.C., and H. Murphy, Vancouver, B.C., were appointed on the nomination of the employer and employees respectively.

Board Reports Received

PURSUANT to the Wartime Labour Relations Regulations, Boards of Conciliation are allowed 14 days in which to make their report. This can be extended,

either by the Minister, or by mutual consent of the parties concerned. The following report was received by the Minister of Labour during December:—

Report of Board in Dispute between and Local No. 1, Wholesale, Retail

On January 11, 1946, the Minister of Labour received the report of the Board of Conciliation, the personnel of which was as follows: Mr. A. D. Muggah, Sydney, chairman, appointed on the joint recommendation of the other two members of the Board, Messrs. Neil Ferguson, Glace Bay, N.S., and Jas. Nicholson, Sydney, appointed on the nomination of the employer and employees respectively.

Report of Board

Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa.
Sir:

Pursuant to the appointment of a Conciliation Board dated October 19, 1945, and pursuant to the appointment of James Nicholson of Sydney, N.S., and Neil Ferguson of Glace Bay, N.S., as members of the said Conciliation Board, dated 10th day of October, 1945, and the appointment of A. D. Muggah, of Sydney, N.S., as Chairman of the said Board dated October 23, 1945, and received on the 26th day of October, 1945, we beg to report as follows:—

The Board met on October 3 and took the oath of office before a commissioner of the Supreme Court of Nova Scotia, following which a meeting was held to discuss the terms of reference, the interim report of Mr. H. R. Pettigrove, Conciliation Officer, procedure to be followed, and other relevant matters. Friday, November 2, was selected as the

Six Retail Stores, Glace Bay, N.S., and Distributive Workers' Union

earliest date possible for a general meeting, and notices were sent to the interested parties to attend, at the Town Hall on that date.

The Board convened at 2.30 p.m., November 2 at the Town Hall, Glace Bay. Present the following:—

Donald McDonald, Maritime Director, C.C.L.; Bernard McDonald, Organizer, C.C.L.; Thomas McLachlan, Bargaining Agent, and President, N.S. Federation of Labour; Russell McDonald, President of the Union, and Bargaining Agent; J. Smith McIvor, Union Solicitor, representing the Union; and Solomon Shore, Isaac Ein, Reuben Zilbert, Jacob Gordon—representing the employers.

The Chairman outlined the purpose for which the Board had been constituted, and asked for the co-operation of both sides in an effort to effect an agreement on the matters at issue.

Mr. McIvor on behalf of the Union tendered a copy of the proposed contract, and expressed the views of the employees stating that there appeared to be no real reason why both sides could not reach a position where a contract might be signed.

Mr. Shore spoke on behalf of the employers and offered the objection that in this instance the four employers (being Hebrew) were the victims of racial discrimination, and should not be asked to enter into a contract until at least four Gentile merchants were in the same position.

Mr. Ein voiced similar views. The employers then requested an adjournment to

enable them to consult with their Solicitor. The request was granted, and the next general meeting called for Wednesday, November 7, at the same time and place.

The Board met in Sydney on November 5, Monday, to examine the proposed contract and to consider the objections offered at the first meeting.

On Wednesday, November 7, the adjourned meeting took place at the Town Hall, Glace Bay, at which time all parties were present and represented by Solicitors.

John McNeil, K.C., employers' solicitor, outlined the position of his clients to be, in substance, as follows:—

1. The employers in this dispute should not be obliged to enter into an agreement until a majority of the retail grocers in the Town of Glace Bay are in the same position.

2. The retail grocery business is highly competitive, and operates on a small margin of profit. The employees involved are paid the equivalent of wages paid by other grocers in the same area.

3. Therefore it is not a fair proposition to put these four in a disadvantageous position, i.e. they would be faced with additional expenses when others would not be.

4. It appears that no Gentile firms have been unionized.

Mr. McIvor, on behalf of the Union, admitted that it was unfortunate that only four were involved, and that the four happened to be of the Hebrew race; however, the Union had been requested by the employees. There is no duty on the Union to organize the whole field, but there is no doubt that this will be the aim.

A general exchange of information took place, with representatives of both parties taking part. The question of representation by the employees was raised. In one instance there are now only four Union members out of fourteen who were members at the time of the organization of the Union.

Mr. McNeil requested a ruling from the Board as to whether the parties should proceed at this time to negotiate an Agreement or to further consider the questions of representation and discrimination.

The Board ruled that the above questions were without bearing on the issue and the parties should attempt to effect an agreement on the proposed contract.

The parties agreed to meet with the Board again on November 14 and in the meantime to consult with Solicitors, so that concrete proposals might be offered.

On Tuesday, November 13, the Board met at Sydney with the solicitors. The proposals

were examined and suggestions made for the next meeting which took place at Glace Bay on the following day, November 14. At this time an amended contract was submitted and each clause examined. Agreement was reached on all clauses except those dealing with holidays and wages.

The parties agreed to have the Board consider these matters, and in the meantime to furnish more information regarding established custom, etc.

It was decided that in order to have a full picture of the matters before the Board an investigation should be made of the premises of the employers; employees should be interviewed, and all pertinent information obtained.

Accordingly on the 15th, 16th, 19th and 20th days of November the Board visited the premises of the six retail stores. Employers and employees were very co-operative and readily furnished all desired information. Working conditions were found to be favourable in all instances, and relations between employer and employee harmonious. Several suggestions regarding comforts for employees were made by the Board and it was found later that these had been carried out.

On November 26 the Board met with Mr. McNeil to consider the employers' proposals regarding holidays and wages, and on the 27th a conference was held with Mr. McIvor to inform him, and to determine whether or not the amendments were agreeable to the Union. Mr. McIvor suggested several changes. On November 28 the contract was re-drafted, and on November 30 the re-drafted contract was considered. Mr. McIvor felt at this time the contract would be acceptable to his clients and he would so recommend.

On December 1, the Union indicated that they were prepared to accept and sign the contract. The employers, except one, appeared also to be in favour. The Board presented the contract to the Union officers who affixed their signatures. Mr. Shore requested further time to consider the matter of holidays.

On December 10 the Board again met with Mr. Shore, who indicated that he was prepared to grant two weeks holidays as soon as price controls were removed, and that he was in favour with the practice of giving two weeks vacation.

The Board met with Mr. Gordon, Mr. Ein and Mr. Zilbert on December 13. They stated that they were ready to sign but would prefer to wait until Mr. Shore was also prepared to accept. Mr. Shore asked for further time to consult with his solicitor.

On Saturday, December 15, the Board met with Mr. McNeil and Mr. Shore. At this conference the matter of dropping the holiday

clause entirely from the contract was considered; the question to be left for the Regional War Labour Board for decision; and it was decided to offer this suggestion to the Union as a solution to the dispute.

On Tuesday, December 18, at a meeting with the Union officers the proposal *re* the holiday clause was presented. The Union was not in favour, unless the wage clause was also to be submitted. At this stage it appeared that the parties were each definitely determined not to yield, and on December 20 a conference was held with Mr. McNeil at which the suggestion was made that a final meeting of all interested parties would be called, at which time an exchange of opinions and information would be made and if agreement was not reached the Board would make a report to the Minister and conclude its work. Mr. McNeil expressed a wish to consult with his client, and the meeting was adjourned until the following day, December 21, when, with Mr. McIvor present the whole situation was considered and opinions offered. It was considered that in view of the Christmas season it would probably be difficult to get all parties together for a general meeting and therefore the matter should be left in abeyance until a more favourable time.

Another meeting was held with Mr. McNeil on December 31, who, on behalf of Mr. Shore, proposed two weeks holidays with pay after three years service. On submission to the Union this was deemed not acceptable.

On Wednesday, January 2, 1946, the Board again met with Mr. McNeil and the employers. Mr. Shore at this time expressed his willingness to sign the contract in its present form, as signed by the Union, whereupon the contract was signed by him, followed by Mr. Zilbert, Mr. Gordon and Mr. Ein, and was witnessed by each Board member.

The Board would like at this time to commend all the parties concerned for the fine spirit of co-operation which prevailed throughout the deliberations of the Board and to express thanks for assistance rendered, particularly by Mr. McNeil and Mr. McIvor.

Respectfully submitted,

(Sgd.) A. D. MUGGAH,
Chairman

(Sgd.) NEIL FERGUSON,
Board Member

(Sgd.) JAMES NICHOLSON,
Board Member

Conciliation Work of the Industrial Relations Branch During January, 1946

Activities Under the Conciliation and Labour Act and Order in Council P.C. 4020

OFFICERS of the Industrial Relations Branch dealt with 15 industrial disputes during the month of January, involving 1,684 workpeople employed in 18 separate establishments. Of these, 9 were new disputes which originated during the month and 6 were situations which had to be terminated as of December 31, and received further attention in January. These disputes were dealt with under the provisions of the Conciliation and Labour Act and under Order in Council P.C. 4020. They were thus distinct from and in addition to the Conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, N.B., and Glace Bay, N.S. The territory of the two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg

cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and two officers resident in Fredericton, N.B., and Glace Bay, N.S., represent the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of the Industrial Relations and staff are situated in Ottawa.

Brief summaries of the cases of chief interest follow:—

Packinghouse Workers, Various Provinces.—The November issue of the LABOUR GAZETTE contained a report of the settlement of a dispute with regard to the terms of collective agreements between the United Packinghouse Workers of America and Canadian Packers, Limited, Burns and Company, Limited, and the Swift Canadian Company, Limited, which was negotiated by the Honourable Mr. Justice S. E. Richards, of Winnipeg, whom the Minister of Labour had appointed as an Industrial Disputes Inquiry Commissioner for the purpose. One of the recommendations of the Commissioner which was accepted by the parties was that hours of work at the

various meat packing plants should be reduced from 48 to 45 hours per week, with the exception of one plant where the work week would be reduced from 54 to 48 hours. The new schedule of daily hours was to be arranged at each plant concerned, and all hourly paid employees were to receive overtime rates for all hours worked in excess of the daily hours so arranged or upon all hours in excess of the normal work week.

Negotiations then proceeded on a local level and at some plants were well advanced in connection with the number of daily working hours. However, at a final stage certain negotiations collapsed owing to differences of opinion as to whether any tolerance should be permitted between the "standard" work week and the "schedule" work week. The companies held out for continuance for 2 or 3 hours' tolerance to provide for varying conditions and fluctuating live-stock receipts. Union representatives demanded that the "schedule" week should be set exactly on the normal week recommended by Mr. Justice Richards in the Winnipeg negotiations.

When newspaper reports indicated that a nation-wide strike vote among the plant employees and the three companies was being contemplated in certain quarters, the Minister of Labour as a preventive measure appealed to all parties on January 17th to expedite negotiations for the conclusion of collective agreements and to refer all questions on which agreement could not be reached to the Advisory Board, as agreed upon in November.

On January 23rd, following some direct negotiations, the District Director of the Union requested the Department to have Mr. Justice Richards reconvene the parties to the dispute in order to clarify the intention of the Winnipeg settlement respecting the number of hours constituting the work week. At the end of the period under review conversations were taking place in Toronto with Mr. Justice Richards acting as mediator.

Rubber Products Workers, St. Jerome, P.Q.—Disagreement over the wages to be paid to 4 eyeletters led to a strike on January 23, 1946, involving some 1,300 employees of the Dominion Rubber Company, Limited, St. Jerome, P.Q. The situation was aggravated by a jurisdictional dispute between the St. Jerome Rubber Workers' Federal Union No. 144 (T.L.C.C.) which held a collective agreement with the company and a rival organization. Normal collective bargaining procedure had been seriously impaired since November, 1945, by a temporary injunction secured by the rival Union from the Superior Court of Quebec which restrained the company from

paying over to the Federal Union the dues collected for it by the company through a check-off system.

On the request of the Quebec Department of Labour, officers of the Federal Department endeavoured to secure a settlement of the strike. Following conferences held in Ottawa a settlement was reached under which all employees would return to work without discrimination. The dispute concerning the wage rate payable to the 4 eyeletters was referred to arbitration by a committee of three persons. It was not possible to deal in any way with the jurisdictional dispute as no decision had been handed down by the Superior Court. Work was resumed by the employees on January 30.

Newspaper Printers, Winnipeg, Man.—A brief account of a strike on November 8th by about 125 employees in the composing rooms of the Winnipeg Free Press Company, Limited, and the Southam Company, Ltd. (Winnipeg Tribune Division) was contained in the December issue of the LABOUR GAZETTE (p. 1819). The report of the Industrial Disputes Inquiry Commissioner, Honourable Mr. Justice W. J. Major, failed to settle the differences between the two publishers and their employees as represented by Local 191 of the International Typographical Union. On December 14, the publishers renewed their proposal to the Union that the draft of the terms of a new collective agreement should be submitted to a Board of Arbitration. When their offer was not accepted, the publishers on December 29th issued dismissal notices to all the employees on strike. The two newspapers then began to organize their composing rooms on an "open shop" basis and to build up new staffs, claiming that no further negotiations with the International Typographical Union were planned or contemplated.

During January, as a result of various requests and intimations that a strike might spread to newspapers of the "Southam chain", the Minister of Labour arranged a joint conference at Ottawa which was attended by heads of the International Typographical Union and the President of the Southam Company, Limited. Following this conference it was proposed by the Minister of Labour that the dispute be submitted to a Board of Conciliation established by him. As the LABOUR GAZETTE went to press, acceptance of this proposal on the part of the publishers was being awaited.

Packhouse Workers, Hamilton, Ontario.—Following a brief strike on November 30, 1945, which affected about 175 employees of Fowler's Canadian Company, Limited,

Hamilton, the Minister of Labour was asked by a representative of the United Packing-house Workers of America to appoint an Arbitrator to deal with a dispute over the promotion of an employee to the position of a sub-foreman. Pursuant to the terms of the collective agreement between the parties, the Minister of Labour appointed as Arbitrator Dr. Alexander Brady, of the Department of Political Economy, University of Toronto. The issue pertained to the alleged misinterpretation and violation of the seniority provisions of the agreement by the promotion of a man over the head of Union members who had more seniority. The company took the position that the dispute was not arbitrable. The Arbitrator found that the Union was fully within its rights in seeking arbitration of the issue as a grievance arising out of the interpretation of the collective agreement. He further decided that the seniority provisions had not been violated since the agreement did not specifically deal with promotions to positions outside the bargaining unit, and that the company was free to appoint anyone to a managerial position without considering seniority.

Coal Miners, Nova Scotia and New Brunswick.—Reports were printed in previous issues of the LABOUR GAZETTE (March, April, June, July, August and November, 1945) regarding negotiations between Government officials, and representatives of coal miners belonging to District 26, United Mine Workers of America, and of certain coal mine operators in the Maritimes, in connection with the miners' demands for certain wage increases and additional holidays with pay.

Following the issuance of a Supplementary Finding and Direction by the National War Labour Board on October 12 and a referendum among the union members later that month, a deadlock ensued over the insistence of operators that the Collective Agreement under negotiation should include conditional clauses to the term of the Agreement. The companies wanted it written into the Agreement that the wage schedules and increased remuneration were based and dependent upon continued financial assistance from the Government, and that if there should be any change in the Government's policy of price control or financial assistance the Agreement would automatically terminate.

After several weeks of negotiations and correspondence, it was proposed by officers of the Department of Labour that the Agreement should be signed and the disputed point covered by an exchange of letters between the parties. As a result of further direct negotiations, an Agreement was signed on February

3rd between District 26, United Mine Workers of America, and the four major coal mine operators.

Prior to the signing of the Agreement the companies wrote Union officials stating that the wage schedules contained therein were possible of payment only because the operations of the companies were assisted by the Dominion Government in the form of money grants by the Government and that the new increases in remuneration for the workmen covered by the Agreement were to be derived

solely from funds arising from the recent increase of 33 cents per short ton in the selling price of coal (see previous issues of LABOUR GAZETTE).

The District Executive Board of the Union, in reply to the companies letters, stated that the Union considered the Agreement to be a "firm contract" until January 31, 1947, and that if the contingencies mentioned in the operators' letters should arise, District 26 reserved the right to take such action as it deemed necessary.

Alberta Federation of Labour Presents Legislative Program to Provincial Government

ON January 15, the Executive Council of the Alberta Federation of Labour, an affiliate of the Trades and Labour Congress of Canada, submitted to the Government of Alberta a program of proposed labour legislation for 1946.

In the program, which is outlined below, the Federation suggested:—

Dominion-Provincial Conferences.—The securing of labour advisers by the government to assist during the discussion of matters directly affecting labour.

Post-war Planning.—The immediate completion of the Industrial Development Board, responsible only to the premier; the establishment of an Industrial Scientific Laboratory; and the encouragement of industrial municipal surveys.

Collective Bargaining.—Defining the term so as to include intent to reach an agreement; amending the Industrial Conciliation Act so that members of the union in good standing and other employees who have been employed for three months prior to the vote shall be included in votes to determine the bargaining agent; employees dismissed for union activity, be entitled to not less than \$100 damages in each case.

Labour Welfare Act.—Introducing provisions to bring municipal and civic employees under the Act; abolishing split shifts; enforcing statutory holidays with pay; and the introduction of an act, similar to that in force in Ontario, providing for vacations with pay in such occupations as the construction industry.

Wages.—A minimum of 60 cents an hour for male workers and investigation and outlawing of incentive bonus plans advocated.

Hours of Work.—Establishing a maximum 40-hour week by-law and introducing it to the civil service.

Workmen's Compensation.—Raising compensation to 100 per cent of earnings and abolishing the three-day waiting period.

Civil Service Conditions.—Protection of Civil Servants in governmental transfers of

employment; better pay for mental institute employees; and the bringing of all government employees not classed as civil servants under the Unemployment Insurance Act.

The Federation, in its proposals also endorsed old age pensions, health plans and health insurance, and the brief of the Alberta Association of Registered Nurses asking for better conditions in the profession. It also asks for a course in labour education to be instituted.

Annual Convention

The twenty-fifth annual convention of the Federation was held in Calgary in November of last year.

A large number of resolutions were placed before the delegates, the most important of which were ultimately embodied in the proposals for labour legislation presented to the Provincial Government, and described above.

The delegates were welcomed by J. C. Watson, President of the Calgary Trades and Labour Council. The report of the Credential Committee showed a total of 119 delegates in attendance, representing Provincial Organizations, Trades and Labour councils, Local Unions and twelve fraternal delegates and guests.

The convention was addressed by the Hon. C. E. Gerhart, Minister of Trade and Industry for Alberta; Mr. J. Hartley, M.L.A., representing the Provincial Command of the Canadian Legion; Mr. Carl C. Cook, Chairman of the Workmen's Compensation Board of Alberta; and Mr. F. J. White, Regional Superintendent of the Unemployment Insurance Commission.

The election of officers resulted as follows: President, D. B. MacKenzie; Secretary-Treasurer, G. G. Cushing; tellers, E. Castles, J. R. Finely, and H. Dear. M. Ainslee was declared elected as Federation Delegate to the annual meeting of the Trades and Labour Congress of Canada.

Lethbridge was declared the next convention city.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the **LABOUR GAZETTE** from month to month. It is not possible because of limitation of space to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Mining, Non-Ferrous Smelting and Quarrying: Coal Mining

ESTEVAN, BIENFAIT, AND ROCHE PERCEE, SASK.—
SIX COAL MINING COMPANIES AND UNITED
MINE WORKERS OF AMERICA, DISTRICT 18.

Agreement to be in effect from July 1, 1945, to July 1, 1946. The parties to the agreement will meet in conference 60 days prior to the expiration date to discuss a renewal thereof. All mine workers who are eligible shall join the union and sign check-off for all dues, assessments and fines. The mine owners agree to make deductions from miners' pay for same and forward it to union.

Hours of work: 8 per day as provided by the Mines Act of Saskatchewan. Overtime at time and one-half and rate and one-half for datal and contract workers respectively for work in excess of normal working time (excepting the 30 minutes allowed to clean up coal in transit at both stripping and deep seam operations), also for work on Sundays or regular scheduled day off and 10 specified holidays.

Hourly wage rates for datal workers: Above ground (both shaft and strip mines)—dumperman, common labour, teamster, carpenter's helper, blacksmith's helper, electrician's helper, and tippie dumper, 62 cents; truck driver, tippie checker, and fireman (stationary boiler), 64½ cents; screenman, locomotive fireman, brakeman tippie operator, and shot firer (in pit), 67 cents; carpenter, blacksmith, hoist engineer, locomotive engineer, stationary engineer, and general repairman, 74½ cents. Under ground (shaft mines only)—common labour, timberman's helper, cager's helper, trip rider, and loader, 64½ cents; timberman, trackman cager, motorman, driver and pumpman, 67 cents; machine runner's helper and shot firer, 72 cents; machine runner and electrician, 77 cents. Contract rates are given for deep seam mines.

"Wet places": where water drops from the roof in sufficient quantities to wet through a

man's clothing or where standing water is over 4½ inches average depth across the place shall be considered a wet place. The rate for such places shall be 40 cents extra per day subject to approval of National War Labour Board. For baling out a wet place before loading, contract miners will be paid 15 cents per barrel or at company rate.

Provision is made for seniority rights and grievance procedure.

Mining, Non-Ferrous Smelting and Quarrying: Metal Mining

SHERRIDON, MAN.—SHERRITT GORDON MINES
LTD. AND INTERNATIONAL UNION OF MINE,
MILL AND SMELTER WORKERS, LOCAL 695.

Agreement to be in effect from October 1, 1945 to September 30, 1946. The company recognizes the union as the sole bargaining agency for all eligible employees. The company agrees to deduct from any employee's pay upon authorization all initiation fees, dues, assessments, etc., and to remit same to union monthly. All employees now members of the union or who become members shall remain members in good standing for the life of the agreement. A joint labour management committee, consisting of equal numbers from the company and union, will be established to accelerate production. They shall meet at least once monthly with the sole object of achieving high working morale, efficiency, mutual production, co-operation and elimination of friction and absenteeism.

Hours of work: hoisting and lowering schedules at the mines will be arranged to provide approximately 8 hours from collar to collar. Overtime: time and one-half for work in excess of 8 hours in any 24-hour period (except when due to regular change of shifts), or in excess of 48 hours per week, and for work on any of 6 specified statutory holidays. Vacation: 6 days with pay after one year's continuous service, 7 days after 2 years' service and so on to a maximum of 12 days after 7 years of service.

Wages: the existing schedule of wage rates shall remain in effect for the duration of the agreement.

Provision is made for seniority rights, grievance procedure, group life, sickness and accident insurance, adequate medical and hospital facilities, and assistance to Sherridon Club, Athletic Club, and Curling Club.

BRITANNIA BEACH, B.C.—BRITANNIA MINING
AND SMELTING CO., LTD. AND INTERNA-
TIONAL UNION OF MINE, MILL AND SMELTER
WORKERS, LOCAL 663.

Agreement to be in effect from September 3, 1945, to September 2, 1946. The company recognizes the union as the exclusive repre-

sentative of all eligible employees, who may join the union. Check off: the company agrees to forward to the union monthly, all dues, assessments and fines so authorized by union members. A labour management committee, based on equal representation of labour and management, may be established, and it is mutually agreed to give every support and consideration to this committee.

Hours of work: for all underground employees 8 hours from portal to portal shall constitute a shift. The regular working week shall be 6 days of 8 hours each, a 48-hour week. Overtime: time and one-half for all work in excess of the above hours for work on the weekly day of rest, and for work on 6 specified statutory holidays. Vacation: annual vacation with pay will be granted to all qualified employees as per N.W.L.B. Directive of September 14, 1943.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Vegetable Foods, etc.

CARDINAL, ONT.—THE CANADA STARCH COMPANY LTD. AND THE NATIONAL UNION OF FOOD PROCESSORS, LOCAL 1.

Agreement to be in effect from February 1, 1945, to January 31, 1946, and thereafter from year to year subject to 6 weeks' notice. The company recognizes the union as the exclusive bargaining agency for all eligible employees. Check-off: the company agrees to deduct union dues monthly from members' pay, who authorize it, and remit same to the union.

Hours of work: 8 per day, a 48-hour week. Overtime: time and one-half for work in excess of 8 hours in any one day or shift, for work on Sundays and 7 specified holidays. Vacation: one week with pay after one full year's continuous service with the company.

Hourly wage rates for male workers: mechanical division—Class 8 (machinist mechanic, pipe-fitter mechanic, electrician mechanic, boiler-maker), 78 cents; Class 7 (millwright, carpenter, mechanic, machine operator, tinsmith mechanic, moulder, coremaker, welder, boiler house fireman), 73 cents; Class 6 (maintenance man mechanic, carpenter mechanic blacksmith), 69 cents; Class 5 (machinist general, pipe-fitter general, electrician general, painter mechanic, meterman, engineer 3rd class), 65 cents; Class 4 (maintenance man general, tinsmith general, babbittman), 61 cents; Class 3 (rigger, improver, painter general, oiler, bricklayer), 58 cents; Class 2 (helper mechanical department), 55 cents; Class 1 (coalman, general labour), 52 cents. Miscellaneous and yard division—Class 7 (locomotive engineer, crane operator mechanic), 73 cents; Class 6 (crane operator), 69 cents; Class 5 (brakeman-upper yard), 65 cents; Class 4 (tractor driver, weigh master), 61 cents; Class 3 (track repair, truck driver, locomotive fireman, brakeman-lower yard), 58 cents; Class 2 (fireman-crane, watchman), 55 cents; Class 1 (truck driver helper, shipping and yard labour), 52 cents. Dry starch, refinery and wet starch divisions—Classes 1 to 7, wage rates same as above for same classifications.

Hourly wage rates for female workers: dry starch division—44 to 61 cents; refinery—41½ to 65 cents; mechanical—41½ to 54 cents; dry starch—39½ to 44 cents; refinery and finished products—39½ to 41½ cents; mechanical and miscellaneous—44 cents.

Apprentice rates for adult males—beginner, 52 cents; after 8 months, 55 cents; after 16 months, 58 cents; after 24 months, 61 cents; after 32 months, 65 cents; after 40 months, reclassification to occupation.

Manufacturing: Tobacco and Liquors

MONTREAL, P.Q.—W. C. MACDONALD INC. AND THE TOBACCO WORKERS' INTERNATIONAL UNION, LOCAL 235.

Agreement to be in effect from April 6, 1945, to April 6, 1946, with provision for parties to agreement to meet prior to expiration date for consideration of renewal. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE for November, 1944, p. 1366.

WALKERVILLE, ONT.—HIRAM WALKER AND SONS, LTD. AND DISTILLERY, RECTIFYING AND WINE WORKERS' INTERNATIONAL UNION OF AMERICA (DISTILLERY WORKERS' LOCAL 61).

Agreement to be in effect from July 1, 1945, to June 30, 1947, and thereafter from year to year subject to 90 days' notice. (Wage rates may be changed on July 1, 1946, upon 30 days' notice.) The company recognizes the union as the sole collective bargaining agency for all eligible employees. All employees must join the union within 15 days of the signing of the agreement, and new employees must join. All employees must maintain membership in good standing as a condition of employment. The company will deduct union dues from the employees' pay monthly and remit same to union, for those employees who so authorize it.

Hours of work: 8 per day, a 48-hour week, for production departments and power house; other departments 44 hours per week. Time and one-half for work in excess of these hours and for work on Sundays (except in production departments and power house) and 6 specified holidays. Vacation: one week with pay for all employees with one to 5 years' service with the company, 2 weeks with pay for employees with 5 years' or more service.

Wages: "An employee shall be entitled to the maximum rate of pay provided for his classification after one year's service with the company and not less than one month in the classification."

Provision is made for seniority rights and grievance procedure.

WATERLOO, ONT.—JOSEPH E. SEAGRAM AND SONS LTD. AND THE DISTILLERY, RECTIFYING AND WINE WORKERS' INTERNATIONAL UNION OF AMERICA, LOCAL 48.

Agreement to be in effect from September 1, 1945 to August 31, 1946, and thereafter from year to year subject to 60 days' notice. The company recognizes the union as the sole bargaining agency for all eligible employees. Only union members in good standing will be kept in employment and permanent new employees must join the union immediately upon being hired. The union agrees to accept such employees as full members upon acceptance and approval of the union and payment of all regular fees and dues.

Hours of work: 8½ per day Monday through Friday, 4½ Saturday, a 48-hour week. Overtime at time and one-half for work in excess of these hours. Employees are given 6 specified statu-

tory holidays with pay, and also Victoria Day if the latter is re-instated by the government as a statutory holiday, provided the employees do not absent themselves from work without permission on work days immediately preceding or following these holidays. Vacation with pay of one week for all employees with one year's continuous service with the company and 2 weeks for all with 5 years' service.

Hourly wage rates after 12 months' service: bottlers—female, 50 cents, male, 65 cents; warehousemen, grain elevator helpers, 68 cents; grain elevator operators, mill helpers, drier house helpers, coal passers, 70 cents; yeast men, mash tub operators, cooker operators, fermenting room, evaporator and spray driers, drier house operators, 75 cents; engineers 2nd class, electricians, 90 cents; coopers, carpenters, maintenance skilled, 80 cents; engineers 3rd class, 79 cents; electricians' helpers, 75 cents; maintenance semi-skilled, 72 cents; yard labour, 65 cents. Weekly wage rates: millers, \$42.60; still operators, \$43.10; shippers, \$41.10; mixer room helpers, \$40; truck drivers, \$35 to \$36.50.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Rubber Products

SARNIA, ONT.—ST. CLAIR PROCESSING CORPORATION LTD. AND UNITED GAS, COKE AND CHEMICAL WORKERS OF AMERICA, LOCAL 14.

Agreement reached following establishment of a Board of Conciliation, to be in effect from August 11, 1945, to August 10, 1946, and thereafter from year to year subject to 60 days' notice. The company recognizes the union as the sole bargaining agency for all eligible employees. Check-off: the company agrees to deduct union dues from employees who so authorize.

Hours of work: for day workers present hours to be continued; for shift workers 8 per shift, a 48-hour week. Overtime: for day workers time and one-half for work between regular quitting time and midnight or during regular lunch period (work permitting a half-hour lunch period will be granted later in the day without payment); double time for work between midnight and regular work starting time on the next regular working day, for work performed on employees' regular day off, and on 6 specified statutory holidays; for shift workers, time and one-half will be paid for work during the 8 hours immediately following their shift and double time for work during the 8 hours immediately preceding their regular shift and as above. Vacation of one week with pay after one year's continuous service and 2 weeks (12 working days) with pay after 3 years' service with the company.

Wages presently being observed by the company and as set forth and authorized by the Regional War Labour Board for Ontario shall be maintained for the duration of the agreement.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Pulp, Paper and Paper Products

LA TUQUE, P.Q.—BROWN CORPORATION AND LE SYNDICAT NATIONAL DES TRAVAILLEURS DE LA PULPE ET DU PAPIER DE LA TUQUE, INC., AND THE NATIONAL FEDERATION OF PULP AND PAPER WORKERS, INC.

Agreement to be in effect from May 15, 1945, to May 13, 1946, and thereafter from

year to year subject to 30 days' notice. The company recognizes the unions as the sole agents for their members and the right of its employees to become members of the union and will not attempt to interfere with such rights, nor to discriminate against such members.

Hours: for day workers, 8 per day, 48 per week; for shift workers, 8 hours shifts, 48 per week. Overtime is payable at time and one-half for day workers as well as for work on Sundays and 4 statutory holidays for all hourly-paid employees. Vacation: one week with pay for employees with one year's continuous service with the company and 2 weeks with pay for those with 5 years' service subject to provisions of the "1945 Vacation Plan" and consent of the Regional War Labour Board.

Provision is made for seniority rights, grievance procedure and an apprenticeship plan.

Manufacturing: Metal Products

TRENTON, N.S.—THE EASTERN CAR COMPANY LTD. AND UNITED STEEL WORKERS OF AMERICA, LOCAL 1231

Agreement to be in effect from September 24, 1945 to September 23, 1946, and thereafter from year to year subject to 30 days' notice. The company recognizes the union as the sole bargaining agency for its members and also the right of employees to become union members. When hiring new employees preference shall be given to union members if available and secondly to residents of the immediate vicinity. All employees now members of the union and any who become members, shall as a condition of employment remain members in good standing during the life of this agreement. Check-off: union dues to be deducted weekly from member's pay by the company upon employee's authorization and paid to the union.

Overtime: time and one-half for work in excess of 8 hours within the 24-hour period, and for all work on Sundays and 6 specified statutory holidays. Vacation with pay shall be established in accordance with the Finding and Direction of the Regional War Labour Board.

Provision is made for seniority rights and grievance procedure.

GUELPH, ONT.—FEDERAL WIRE AND CABLE COMPANY LTD. AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 3021

Agreement, reached in settlement of a strike (L.G., Dec., 1945, p. 1869), to be in effect from December 1, 1945, to December 1, 1946, and thereafter from year to year subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees.

Hours of work: a 48-hour week. In order to have Saturday afternoon off the hours have been amended from the 8 hour day to 8½ Monday through Friday and 4½ on Saturday. Overtime to be paid at time and one-half for all work in excess of these hours and for work on Sundays and 6 specified statutory holidays. Vacation: one week with pay for employees with one year's service or more with the company.

Wages: a wage schedule and job classification to be negotiated and made a part of this agreement subject to the approval of the Regional War Labour Board.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Shipbuilding

COLLINGWOOD, ONT. — THE COLLINGWOOD SHIPYARDS LTD. AND THE INDUSTRIAL UNION OF MARINE AND SHIPBUILDING WORKERS OF CANADA, LOCAL 4.

Agreement, pursuant to a Board of Conciliation, to be in effect from August 1, 1945, to August 1, 1946, and thereafter from year to year subject to 30 days' notice. The company recognizes the union as the collective bargaining agency for all eligible employees and there is to be no difference in the treatment of union and non-union members.

Hours of work: day shift—9 per day Monday through Friday, 5 on Saturday, a 50-hour week in the summer; 8½ per day Monday through Friday, 4½ on Saturday, a 48-hour week in the winter; night shift—11 per night Monday through Friday, a 55-hour week. Overtime at time and one-half for all work in excess of 48 hours in any one week for both day and night work, summer and winter, and for work on 3 specified statutory holidays. Double time to be paid for any work that is absolutely necessary on 3 additional statutory holidays. Vacation with pay will be granted as directed by the War Labour Board or other recognized government board having authority.

Wage rates shall be in accordance with the provisions of Finding and Direction of National War Labour Board dated January 7, 1944, and any further Finding and Direction of National War Labour Board.

Five cents per hour additional to the regular day rate shall be paid to employees on the night

shift. "Dirty work" is to be paid at time and one-quarter.

Provision is made for seniority rights and grievance procedure.

MIDLAND, ONT.—MIDLAND SHIPYARDS, LTD. AND THE INDUSTRIAL UNION OF MARINE AND SHIPBUILDING WORKERS OF CANADA, LOCAL 9.

Agreement following a Board of Conciliation to be in effect from November 7, 1945, to November 1, 1946, and thereafter from year to year subject to 30 days' notice. The company recognizes the union as the collective bargaining agency for all eligible employees and there will be no difference in the treatment of union and non-union employees.

Hours of work: day shift—8½ per day Monday through Friday, 4½ on Saturday, a 48-hour week; night shift—9½ hours per night Monday through Thursday, 10 hours on Friday, a 48-hour week. Overtime: time and one-half for all work in excess of 48 hours in any one week and for work on 3 specified statutory holidays; on 3 additional statutory holidays only work that is absolutely necessary to be done and paid for at double time. Vacations with pay shall be granted as directed by the War Labour Board or other responsible authority.

Wages shall be in accordance with the provisions of the Finding and Direction of National War Labour Board, dated January 7, 1944, and any further Finding and Direction of National War Labour Board.

"Dirty work" to be paid for at one and one-quarter the normal hourly rate. Five cents per hour additional to the regular day rate shall be paid to employees on night shift.

Provision is made for seniority rights and grievance procedure.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship and certain other conditions made binding, throughout the Province or within a certain district, on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for filing objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning the legislation is given in the LABOUR GAZETTE, January, 1943, page 86. Proceedings under this Act and earlier legislation

have been noted in the LABOUR GAZETTE monthly since June, 1934.

Recent proceedings under the Act include the amendment of five agreements and the correction of one other, all of which are noted below. A request for a new agreement for permanent municipal employees in the City of Quebec was published December 15, 1945. A request for the amendment of the bakers' agreement in Montreal was also published December 15. Requests for the amendment of the building trades agreements for both Montreal and Quebec were gazetted December 22. Requests for the amendment of the agreements for barbers and hairdressers at Three Rivers, bakers and deliverymen at Three Rivers, building trades at Quebec, uncorrugated paper box industry for the Province and barbers at Sherbrooke were published January 12. A request for a new agreement for firefighters at Quebec was also published January 12.

Orders in Council were also published approving the constitution and by-laws of

certain joint committees and others approving the levy of assessments on the parties.

Manufacturing: Printing and Publishing

PRINTING TRADES, MONTREAL

An Order in Council, dated December 21, 1945, and gazetted January 5, 1946, extends the term of the previous Orders in Council, (L.G., November 1945, p. 1679, and previous issues) to March 1, 1946.

LITHOGRAPHERS, PROVINCE OF QUEBEC

A correction of the Order in Council (L.G., December, 1945, p. 1824) is published in the Quebec Official Gazette, December 29, 1945. This correction does not affect the summary already given.

Construction

BUILDING TRADES, MONTREAL

An Order in Council, dated December 21, 1945, and gazetted January 5, 1946, extends the term of the agreement (L.G., January, 1945, p. 71, September, p. 1341, November, p. 1679, December, p. 1827) to March 31, 1946.

Service: Business and Personnel

FUNERAL UNDERTAKERS, MONTREAL

An Order in Council, dated December 14, and gazetted December 22, extends the term of the agreement (L.G., December, 1945, p. 1827 and previous issues) to January 17, 1946.

BARBERS AND HAIRDRESSERS, JOLIETTE

An Order in Council, dated December 7, 1945, and gazetted December 15, 1945, amends the previous Orders in Council for this industry (L.G., January, 1944, p. 70, September, p. 1143, January, 1945, p. 71) by providing that within the City of Joliette, the Monday holiday applies to every month of the year in the hairdressing parlours and the hours of work shall end at 7 p.m. on Saturday and holiday eves. Other amendments do not affect the summary already given.

BARBERS AND HAIRDRESSERS, THREE RIVERS

An Order in Council, dated December 7, 1945, and gazetted December 15, 1945, amends the previous Orders in Council for this industry (L.G., February, 1945, p. 182, August, p. 1199, and previous issues) by providing for a reduction in the hours of work of barbers and men's male and female hairdressers of Louiseville from 62 to 56 hours per week.

Canadian Vocational Training

THE following types of projects are now carried on under Canadian Vocational Training by the Dominion Department of Labour in co-operation with the Provincial Governments:

- (1) The vocational and pre-matriculation training of discharged members of the Forces.
- (2) Training of apprentices.
- (3) Retraining of workers released from employment.
- (4) Training of foremen and supervisors.
- (5) Training of young people and assistance to students.
- (6) Dominion financial assistance to the province for vocational schools.

Cumulative Enrolment

From its inception up to December 31, 1945, the gross enrolment in all types of projects has been 452,985 made up as follows:

Full-time pre-employment classes for war industry	108,408
Part-time classes for persons employed in war industry	35,256
Full-time plant schools in industry..	38,000
Industrial supervisors and foremen...	104,721
R.C.A.F. Tradesmen	65,213
Army Tradesmen	49,262
Navy Tradesmen	9,056
Discharged members of the Forces....	33,814
University students	9,255

Training of Discharged Members of the Forces

The enrolment of discharged members of the Forces for different types of vocational and pre-matriculation training showed a further substantial increase during the month of December, although owing to the Christmas holiday period, the increase was not so marked as in the preceding months. The total enrolment on December 31 was 20,166 distributed as follows:

Pre-matriculation Classes.....	5,286
Correspondence Courses.....	412
Training on the Job in Industry.....	4,065
Pre-employment Training in Private Trade and Commercial Schools.....	2,847
Pre-employment Training in C.V.T. Schools	7,556

The shortage of housing accommodation has increased the difficulties in many of the cities where special rehabilitation training centres

have been opened. C.V.T. has been faced with the problem of providing board and lodging for those enrolled in the different classes. Such accommodation has already been arranged at Red Deer and Brockville.

New buildings have been obtained and additional classes opened in recent weeks in the following places: Vancouver, Edmonton, Prince Albert, Regina, Winnipeg, Fort William, Toronto, London, Brockville, Prescott, Kit-chener, Montreal, Sherbrooke, Three Rivers, Quebec, Moncton and Pictou. The seasonal decrease in employment has made it more difficult in some areas to locate suitable opportunities for training veterans on the job in industry. It is anticipated that this situation will be corrected with the approach of spring. Additional field staff, however, have been taken on and a special effort has been made to develop training on the job opportunities. The attention of veterans has been directed to the building and construction trades as affording excellent prospects of immediate employment. This effort has been carried on through the co-operation of the counsellors of the Department of Veterans Affairs and the three Services as well as by radio broadcasts, bulletins and special publicity given in the Press.

Vocational Training Advisory Council

In the middle of January a meeting of the Vocational Training Advisory Council was held in Ottawa at which special attention was given to the training of discharged members of the Forces. Numerous resolutions and recommendations were made, which have been passed on to the appropriate authorities. A fuller account of the meeting is given elsewhere in the *LABOUR GAZETTE*. The meeting was followed by a conference of the Regional Directors and Superintendents of Rehabilitation Training in all provinces, at which attention was given to detailed methods of procedure, closer co-operation with the Department of Veterans Affairs and the National Employment Service, the expansion of existing facilities and the addition of special types of vocational training.

Other Training Projects

No training has as yet been commenced in any province for workers released from gainful employment and no additional provinces have

completed the agreement, other than those mentioned in the last issue of the *LABOUR GAZETTE*.

The Agreement on Dominion assistance to vocational schools has been signed by all provinces, except Ontario, and under the terms of the agreement, Dominion aid in these prov-

inces will be retroactive to April 1, 1945. Assistance has been given to university students, nurses in training at hospitals and prospective teachers under the Student Aid Schedule of the Youth Training Agreement, which is in effect in all provinces of the Dominion.

Vocational Training in Transition Period

Advisory Council Recommends Expansion of Facilities

THE Vocational Training Advisory Council established late in 1942 under the Vocational Training Co-ordination Act, held its sixth general meeting in the Senate Railway Committee Room, Ottawa, January 15 to 17, 1946. Dr. G. Fred McNally, Deputy Minister, Department of Education, Alberta, Chairman of the Advisory Council, presided.

Address of Welcome

Mr. Arthur MacNamara, Deputy Minister of Labour, welcomed the members on behalf of Hon. Humphrey Mitchell, who had been called out of the city on Departmental business. Mr. MacNamara said that in his belief "the training of veterans and war workers and the establishment of vocational training facilities generally were matters, the importance of which could not be stressed too much."

He referred to the present training facilities and reminded the Council that there were still 300,000 men in the Armed Services. He expressed the opinion that at least 300,000 veterans and war workers would be released by Spring. "As many of these will want vocational training, there is a possibility that additional training facilities will be required." He suggested that the Council might find it desirable to recommend that these be provided.

He pointed out that the Government had promised to give veterans the type of vocational training they desired when they wanted it and declared that he considered vocational training to be as important to the country as university training in that it helped people to secure employment more readily.

Director's Report

Mr. R. F. Thompson, Director of Vocational Training, Department of Labour, presented a report covering recent activities of the Training Branch. He stated that "radical changes had been made in the content of training following the termination of active hostilities." All projects formerly carried on for army and navy tradesmen (War Emergency Training) had been discontinued, except the training of

foremen and supervisors, which it was planned to continue until the end of the present fiscal year. After that time, Mr. Thompson stated, it will be carried on in those provinces that have expressed a willingness to share the costs with the Dominion on a 50-50 basis.

He pointed out that the training of discharged members of the forces had developed into the major responsibility of Canadian Vocational Training. "During the last few months," he said, "the number of those under training has increased by approximately 5,000 each month. Up to the end of November nearly 30,000 had been enrolled in all types of training, and at November 30, those actually under training numbered over 17,500."

Mr. Thompson stated that "use is made of 55 special C.V.T. training centres opened in 37 cities and towns throughout the country. These provide training for approximately 60 different occupations. Training is also given in approximately 40 municipal and vocational schools and about 100 private trade and commercial schools." At the present time, he said, the special C.V.T. centres have "a normal capacity for approximately 11,000 in technical classes, 2,500 in commercial classes and 5,700 in pre-matriculation schools." By a combination of crowding and operating second shifts, these capacities could be increased by approximately 60 per cent. However, Mr. Thompson was of the opinion that if C.V.T. is expected to provide accommodation for all unemployed veterans, the results on the efficiency of the training would be detrimental. Difficulty had been met in preventing disproportionate numbers of veterans from seeking training in certain occupations while other lines of work that offered more opportunities for employment were, in varying degrees, neglected.

Mr. Thompson sketched briefly the financial responsibility assumed by the Dominion in agreements with the several provinces for the re-training of industrial workers, assistance to vocational schools, youth training and apprenticeship. He reported that each of the nine provinces had already signed the agreements to make provision for youth training; five had

signed for the re-training of industrial workers and for assistance to vocational schools; and seven had signed apprenticeship agreements.

Report Discussed

Mr. W. S. Woods, Deputy Minister, Department of Veterans Affairs, addressed the Council on the training of ex-service personnel. He stressed three main points: (1) There are, he said, "10,000 veterans on out-of-work benefits and the number is increasing daily;" (2) The numbers in vocational training courses are smaller than was anticipated and he hoped that more facilities would be provided in order to take care of those who were awaiting training; (3) While the D.V.A. did not want courses to be set up merely to keep ex-service personnel off benefits, Mr. Woods showed concern that more persons were not being trained on the job.

Mr. Thompson explained that in his opinion the chief reason for the large increase in the numbers applying for vocational training was the present dislocation of industry caused by the cancellation of war contracts, as well as to the usual seasonal unemployment. He agreed that in the case of a few specialized occupations, vocational training facilities were not fully adequate, but in others, as for example, the building trades, the total capacity was not nearly filled. However, it had not been possible to secure sufficient buildings and equipment to meet all requirements. He suggested that one of the difficulties in the matter of training-on-the-job lay in the tendency of the counselling services to encourage "course mentality" in veterans, even before their discharge, thus inducing too many to ask for training.

In the discussion that followed it was revealed that the number of applicants for training varied widely both regionally and by occupation; that the training asked for and given did not always result in employment, although related directly to rehabilitation; that certain modifications in counselling procedure might help in relieving the situation and that veterans, as a general rule, objected to further discipline after being released from the armed services.

Reports of Regional Directors

The Regional Directors of Vocational Training presented brief verbal reports in which they sketched the progress of training and the difficulties encountered in their respective regions. Those reporting were: Mr. L. W. Shaw, Prince Edward Island; Dr. F. H. Sexton, Nova Scotia; Mr. W. K. Tibert, New Brunswick; Lt.-Col. Lemay, Quebec; Mr. H. H. Kerr, Ontario; Col. Neish, Manitoba; Mr. W. A. Ross, Saskatchewan; Mr. J. H. Ross, Alberta; and Mr. Hill, British Columbia.

Royal Commission on Veterans' Qualifications

Brigadier Lyon reported on the work of the Royal Commission (Bovey Commission) appointed "to inquire into the matter of obtaining credit on re-entering civilian life for experience and trade, technical or other educational qualifications gained while in the Armed Forces, and report on what arrangements can be made with the provinces, employers and trades and labour organizations to this end." Included in the recommendations of the Commission were some that concerned vocational training, apprenticeship and the standardization of trade tests in the several provinces. Brigadier Lyon stated that "most of the recommendations . . . had given publicity to matters which are in the interests of ex-service persons and that a great deal of good had been done on that score alone."

It was pointed out that a limited number of ex-service personnel, as for example, women who wanted to train as nurses, needed to secure their matriculation standing by a specific time and it was urged that C.V.T. make some special provision for the training of such persons.

Home Service Training

Miss Marion Graham, Supervisor of Women's Training pointed out that there is a great demand for trained home service workers, but few women who had been in the Armed Forces or in wartime industrial work were inclined to accept such work. Miss Graham suggested that if appropriate labour legislation with respect to such work were enacted, establishing adequate minimum wages, conditions, unemployment insurance benefits, etc., more girls might be induced to take advantage of the home service training offered by C.V.T.

The possible advantages of registries for home service workers was discussed and it was revealed that such registries had been attempted in the cities of Toronto and Victoria. (See following article.)

Other Training Services for Women

A strong demand was reported from ex-service women for further training and recognition in practical nursing. One of the recommendations of the Bovey Commission regarding this demand had resulted in the several provincial Registered Nurses Associations submitting training courses and indicating their support for the licensing and registry of practical nurses. It was revealed that Manitoba had passed a Practical Nurses Act. Other provinces have set up C.V.T. schools for practical nurses and it was expected that graduates of these schools will be recognized by subsequent legislation.

Miss Graham reported concerning interviews she had had with senior officials of large retail stores. These officials had recommended that graded courses should be provided for basic instruction in merchandising and salesmanship. She suggested also that handicraft training centres should be established and instruction carried out from a commercial viewpoint rather than as a hobby. The prospective growth of the tourist trade, she held, would provide an outlet for the products of such craftsmanship, if properly organized. She drew attention to the training of girls' work supervisors being carried on by the Extension Department of the University of Toronto and certain church organizations.

Dr. Mary Salter of D.V.A. gave a statistical analysis of the members of ex-service women taking various types of training. She stated that counsellors had been asked to emphasize those occupations where the best employment opportunities exist. She did not favour trying to induce ex-service persons to work in industries where conditions and wages were poor.

It was suggested also that ex-service women might be made interested in training for library work, for physical and occupational therapy and for work in industrial relations.

Apprentice Training

It was reported by the Director of Vocational Training that standards were being established in order to assess properly the trade credits to be allowed ex-service personnel in designated trades, notably the construction trades and motor mechanics. It was hoped that reasonable uniformity would, in this way, be established throughout the Dominion. To do this, a series of tests had been set up and it was indicated that veterans are being given every reasonable consideration in entering any of these trades.

Emphasis was placed on the quality of the training being given. It was asserted that inadequately trained veterans might compromise the employment opportunities of all veterans. Hence veterans should be required to live up to certain standards in their chosen trades.

Assistance to Vocational Schools

The matter of replacing worn out equipment in vocational schools was considered. Efforts had been made to obtain machinery, tools, etc., from the War Assets Corporation, but this had not been entirely successful, in part at least, owing to the system of priorities the Corporation had been following, which gave industries the preference in many instances.

Resolutions

Lt.-Col. F. T. Fairey, Chairman of the Resolutions Committee in his report presented six resolutions, which were considered in detail by the full Council and finally adopted. They were as follows:

(1) That the Minister of Labour be requested to discuss with the Ministers of National Defence the desirability of releasing qualified teachers from the Armed Services with the least possible delay, in order to relieve the shortage of qualified vocational instructors.

(2) That in vocational training centres where housing facilities are inadequate, agreements be reached with "some responsible department" to provide adequate board and lodging for trainees at prices within their financial means during the training period.

(3) That the Department of Reconstruction be urged to greatly accelerate the declaration of surplus equipment by industry and the Armed Forces, particularly the R.C.A.F., that the War Assets Corporation immediately enforce the Government's declared policy of giving vocational training schools priority in the release of such equipment; and that the Minister of Labour be requested to arrange for the immediate release of necessary equipment, despite the claims of industry, or other prospective buyers.

(4) That the Department of Veterans Affairs request C.V.T. to extend its facilities to provide for the acceptance of all discharged persons who may be approved for training; that D.V.A. arrange for more thorough counselling, so that trainees may be fully informed of occupational opportunities and conditions in the employment of their choice; and that if placement in a particular trade seems unlikely, C.V.T. be asked to arrange training that will embrace a broadly related field.

(5) That home service be regarded as an honourable and useful occupation; that suitable courses be established by C.V.T. and by other educational authorities to build up the skills of home service workers; that unemployment insurance benefits be made available for such workers; and that provincial legislation be established as to conditions of work for home service workers.

(6) That an intensive publicity program, similar to that carried out in wartime to stimulate the war effort, be undertaken without delay and with such continuity, that all classes in the community will become fully acquainted with the facilities offered by veterans' legislation.

The Council decided to hold its next meeting sometime in October, 1946.

Replacement of Equipment

Subject to certain conditions, the Dominion Government is assuming responsibility for 75 per cent of the cost of machinery or other equipment purchased from the War Assets Corporation to replace equipment in provincial and vocational training schools and institutes worn out or made non-serviceable through the training of tradesmen for the Armed Forces or workers in war industries. Authorization was effected by Order in Council P.C. 16, of January 4.

Under the War Emergency Training Agreement, the Provincial Governments and municipal school boards placed at the disposal of the Dominion Government, without charge for rent or depreciation, vocational shops and equipment for the training of tradesmen. Four years of practically continuous use of the

equipment by a succession of new groups of trainees seriously depreciated a considerable amount of this equipment, necessitating early replacement. Based on these facts, representations were made by a number of the provinces, provincial and municipal educational bodies, and organizations concerned with vocational training, for the Dominion Government to assume a proportion of the replacement cost.

The conditions, under which the subsidy will be paid, require the province or municipality to provide evidence that the machinery for replacement was worn out by its use for wartime training, and that 25 per cent of the replacement cost is assumed by the claimants. Contribution will not be made to the cost of expendable equipment such as hand tools and material supplies. The equipment will be acquired from the surplus machinery at the disposal of the War Assets Corporation.

Solving Shortages of Home Assistants

It was revealed recently by Miss Marion Graham, Supervisor of Women's Training, Department of Labour, that there are at present more opportunities for home service employment than in any other field open to women workers. During the war the demands of the Armed Services and of wartime industries presented a strong appeal to women employed in home service and on the staffs of hotels and restaurants. Consequently, many of them left their peacetime employment for war work. Occupational surveys show that they are now reluctant to return, after having had a taste of better pay and working conditions, shorter hours and an enhanced social position.

As a result, there is a growing recognition of the need for new and additional incentives in order to encourage suitable types of women to undergo training, so as to replenish this depleted occupation with efficient and skilled workers. Miss Graham pointed out that already there has been a noticeable upward trend in wages paid and in the provision of better working conditions. However, efforts must be made to improve the social as well as the economic status of the household worker.

As a first step in that direction, she suggested that improvement in employer-employee relationships was essential and that educational campaigns should be undertaken by women's organizations among their own members. It was considered that such campaigns would create and foster in the employers a more sympathetic understanding of the problems and points of view of their household assistants. Thus, there could be developed

a relationship of mutual concern, co-operative interest, and initiative on the part of both employer and employee in the management of the home.

It was recognized, however, Miss Graham stated, that if the home assistant is to be an efficient co-operator in home-making she must be qualified by adequate training for her important work. It is hoped that a supervisory and practical training course should meet the demand. Instruction and practice in various tasks carried out in home management should be given, and an interest aroused in the planning of such duties. This course should also serve to guide the employee not only in the use of, but the choice of tools. A section on cookery and other pertinent subjects would provide practice in the best use of available foods, materials and equipment.

The science of home making, she asserted, must be studied in all its phases and not as a series of more or less isolated problems. Therefore, the ideal conditions for teaching such a course are "practice houses", that is, premises equipped as small modern homes. All related subjects on the home training course would be grouped and supervised by a qualified home economist, and assistance in training would be given by women having specialized knowledge who would act as demonstrators. As a supplement to the education of employers and employees she was of the opinion that household workers should be recognized by legislation with regard to wages, hours of work, unemployment benefits, etc.

Training, it is felt, is one of the foremost remedial steps towards placing domestic oc-

cupation on a proper level. Bearing this thought in mind, Canadian Vocational Training is offering courses, from three to seven months' duration, to household assistants at various Regional Centres across Canada. Although the reported number enrolled to date in such courses is not gratifying, Miss Graham stated, it is hoped that close liaison with the different Women's Service Clubs and Citizens' Rehabilitation Committees, will bring about more encouraging results in the near future.

There has been a common request from representatives of the three Women's Services for a short course in "Home Making and Family Living" for brides and potential brides. These courses will be approximately three to four months in duration. All Home Makers' courses throughout the various provinces will work to a common outline. The

suggested outline for such a course, Miss Graham explained, has been drawn up by Miss D. Runciman, President of the Canadian Home Economists in Committee. Topical headings have been completed by various home economists connected with Provincial Extension Departments of the Canadian Universities. The contribution of Dr. Griffin of Toronto University was an outline on family relationship and attitudes. Although those who have already established, or who are about to establish, their own homes will be chiefly interested in this course, there is no intention to limit this course to those who are married or engaged. Then too, this course is not to be confused with the course for home assistants, designed for those who wish thorough training in household skills, placement in the field of domestic occupations.

Employment Outlook in United States for Automobile Mechanics

The United States Bureau of Labour Statistics has issued a Bulletin entitled, *Employment Outlook for Automobile Mechanics*. The Bulletin is the result of a study undertaken by the Bureau to provide information for vocational-guidance purposes.

It states, "a sharp rise in employment of automobile mechanics is in prospect now that the war is over. Nevertheless, taking the country as a whole, the number of persons who will be seeking employment in the occupation will exceed the number of available jobs."

In 1940, there were 377,000 employed automobile mechanics and repairmen and 65,000 who were unemployed making this one of the largest skilled occupations in the country. Many inexperienced persons entered the trade during the war, but so many mechanics left to go into war industries that employment dropped by at least 40 per cent.

"In view of the expected expansion in motor-vehicle registrations and repair needs, employment is expected to rapidly reach its pre-war level and subsequently rise at a slower pace, reaching about 450,000 by 1950".

The Bulletin reports that despite a few thousand job openings each year due to

deaths, retirements, and transfers to other type of work, the number of men with military or civilian experience who will be looking for jobs will exceed the anticipated number of employment opportunities.

For people who plan to enter this profession despite the anticipated oversupply of labour, the Bulletin presents an outline of preparations that would help the prospective entrant achieve success. Young people under 18 should, if possible, complete at least two years of high school. For people over high school age, the quickest way to become a skilled mechanic is to find employment in a repair shop, learn on the job from experienced men, and concurrently supplement this experience with night school instructions in related technical subjects. Beginners going to work in the trade have usually had to start out in such jobs as helper, greaser, or washer. Opportunities for systematic training are likely to be more widespread than before the war.

Earnings of automobile mechanics vary widely, even in the same city. In 1938 and 1939, typical earnings in the United States ranged from \$20 to \$35 for a 40 to 60 hour workweek, though some highly skilled men made considerably more.

*Activities of Unemployment Insurance Commission**

Analysis of Statistics for December—Insurance Registrations—The Fund—Insurance Book Renewal—Decisions of Umpire

CLAIMS for Unemployment Insurance benefit filed in local offices across Canada during December totalled 57,612, a small increase of 4,287 over the November total of 53,325. During December of last year 13,770 claims were recorded. All provinces except Nova Scotia share in this increase over the November figures, but the increases are small (ranging from 38 in Quebec to 736 in Alberta) except in British Columbia which accounted for 2,757 additional claims.

Although the number of claims filed in December did not increase materially over November, the number of persons signing the live unemployment register during the last six working days in December increased to 113,386 from 85,174 during the last week of November. This would indicate that claimants are not being placed in employment so rapidly as before with the result that their claims remain active. This is true to a greater extent for males than for females, the males having increased from 64,592 in November to 91,138 in December, while the females increased from 20,582 in November to 22,248 in December.

Claims adjudicated at Insurance Offices during December totalled 49,887 of which 39,570 were considered entitled to benefit and 10,317 not entitled to benefit. The chief reasons for non-entitlement were "insufficient contributions while in insurable employment" (5,311 cases); "voluntarily left employment without just cause" (2,647 cases); "loss of work due to a labour dispute directly affecting the claimant" (995 cases) and "discharged for misconduct" (671 cases).

During December 79,856 persons received one or more benefit cheques totalling \$3,450,853 as compensation for 1,684,319 days of unemployment. In November 61,193 persons were paid \$2,509,610 for 1,244,023 compensated unemployed days, while during December of last year 10,656 persons were paid \$337,220 for 176,084 days of compensated unemployment.

The average duration of the unemployment compensated was, then, 21.1 days in December, 20.2 days in November and 16.5 days in December 1944. The average amount of benefit paid per beneficiary was \$43.21 in December, \$40.82 in November and \$31.65 in December

last year. The average amount paid per compensated day of unemployment was \$2.05 in December, \$2.02 in November and \$1.92 in December 1944.

Insurance Registrations

Reports received from Local Offices of the Unemployment Insurance Commission showed that as at December 31, 1945, 3,040,966 employees were issued with Insurance books and had made contributions to the fund at one time or another since April 1, 1945, an increase of 59,209 since November 30, 1945.

As at December 31, 1945, 154,312 employees were registered as having insurable employees, an increase of 1,494 since November 30, 1945.

Registrations to December 31, 1945 by regions are given in Table 1.

Fourth Annual Report of Unemployment Insurance Commission

The Unemployment Insurance Commission has published the fourth annual report of its activities for the fiscal year ending March 31, 1945. It deals with the administration activities such as: organization, personnel, statistics, and public relations; and with activities under its Employment Service and Unemployment Insurance.

Unemployment Insurance Fund

Total Employer-Employee contributions for December amounted to \$4,830,161.63 as compared with \$5,295,160.52 in the previous December, a decrease of 8.8 per cent.

Benefits paid during December amounted to \$3,449,767, the largest amount for any month to date. This represents an increase of 37 per cent over the figure for November when benefit payments were \$2,508,616.02.

Under the heading of "interest" an adjustment has been made in December to provide for amortization of premium on bonds for the year.

Out-of-Work Benefits

After February 1 out-of-work allowances to veterans qualifying for this assistance will be paid through offices of the Unemployment Insurance Commission, by arrangement with the Department of Labour, Hon. Ian A. Mackenzie, Minister of Veterans Affairs, announced recently.

*Statistics (including tables) are based on returns supplied by the Unemployment Insurance Commission and the Dominion Bureau of Statistics.

"This co-operative agreement between the two departments is designed to speed the servicing of Canadian veterans," the Minister stated. "After February 1, if the ex-service man qualifies for out-of-work allowances under the Veterans Rehabilitation Act and lives in one of Canada's larger cities, he will receive a weekly voucher at a National Employment Service office which he can cash on the premises. In the smaller centres he will receive a warrant he can cash at any chartered bank."

From the time the veteran receives his initial voucher he can continue to call weekly at his nearest N.E.S. office and obtain his out-of-work allowances on the spot, so long as he remains unemployed and can qualify under the terms of the Veterans Rehabilitation Act, the Minister explained. So far as is possible, the same administrative machinery now used to pay Unemployment Insurance benefits will be used to expedite the payment of out-of-work allowances.

Digest of Selected Decisions of the Umpire Under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the Provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945 number of the *LABOUR GAZETTE* and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike, brief statements of the principles upon which insurance against unemployment operates in Canada and of actual facts in specific cases coming before the Umpire on appeal.

As announced in the earlier issues, the selected decisions are being published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C

CU-B44

(27 June, 1945)

The claimant, a single woman, was notified by telephone by the Local Office of the Commission of a vacancy in a department store either as a sales clerk or an elevator operator. She refused to apply for the positions, stating that she was not interested, but at the time of the hearing before the Court of Referees she claimed that she was only offered the position of elevator operator, which she could not accept on medical grounds—HELD: The question at issue is one of interpretation of the facts, namely, whether or not the claimant's version of what transpired should be accepted or the version given by the local officer of the Commission. The Court of Referees had the advantage of hearing the claimant personally and was in a position to judge her credibility and demeanour: Therefore, there appears to be no reason why the Court's decision should be disturbed, based as it was on its appreciation of the evidence presented.

The material facts of the case are as follows:

The claimant, a single woman, aged 30 years, was employed as an instrument worker in an aircraft plant from April, 1942 to November 17, 1944, when she was laid off. Her rate of pay was 70 cents per hour.

On January 23, 1945 she filed a claim for benefit and the claim was allowed. At the time of filing her claim she registered for employment as a receptionist. She was offered

various positions and accepted one but became unemployed again and on February 12, 1945 the local office notified her by telephone of a vacancy in a department store as either sales clerk or elevator operator at the rate of \$15.30 per week. The claimant refused to apply for the positions, stating that she was not interested.

The Insurance Officer was of the opinion that the claimant, without just cause, had failed to apply for suitable employment and disqualified her from receipt of benefit for a period of six weeks from February 12, 1945.

The claimant appealed to a Court of Referees from the decision of the Insurance Officer.

The Court of Referees heard the claimant personally and also the local officer of the Commission. The claimant contended that she was only offered the position of elevator operator and refused because she claimed that the operation of an elevator made her dizzy, although she then admitted that she did not give this reason to the officer of the Commission. The officer of the Commission stated that the claimant was offered the position of sales clerk or that of elevator operator.

The Court of Referees, by a majority decision, found that the claimant did not have just cause for refusing to accept the employment offered, which was considered suitable but, in view of the difference in wages between the position she formerly occupied and that which was offered to her, the Court reduced the period of disqualification from six to three weeks commencing February 12, 1945.

The claimant appealed to the Umpire from the decision of the Court of Referees.

DECISION

The Umpire's decision was that the claim should be disallowed and the claimant disqualified for a period of three weeks commencing February 12, 1945 and gave as his reasons that:

The question at issue is one of interpretation of the facts, namely, whether or not the claimant's version of what transpired should be accepted or the version given by the local officer of the Commission.

The Court of Referees had the advantage of hearing the claimant personally and was in a position to judge her credibility and demeanour; therefore, it is felt that there is no reason why the Court's decision should be disturbed, based as it was on its appreciation of the evidence presented.

CU-B43*(27 June, 1945)*

The claimant, a military pensioner, 68 years of age, who was in the employ of the Dominion Government, was advised that he could not receive his pension as well as a salary from the Government, that his pension would be reduced to the extent of his salary and that he had to refund over \$1,500.00 at the rate of \$7.75 per month from his pension. He resigned and applied for benefit but his claim was disallowed by the Insurance Officer and the Court of Referees—HELD: When entering the employ of the Government the claimant was not aware of the facts outlined above. Had he elected to work in private industry he would have been entitled to receive his full pension and a salary. Had he remained with the Department he would have been working, in effect, for \$11.59 per month. In view of these circumstances the claimant had just cause for voluntarily leaving his employment.

The material facts of the case are as follows:—

The claimant, a widower, aged 68 years, was employed as a messenger by one of the Departments of the Dominion Government at Ottawa, at a salary of \$89.12 per month, from March 1, 1943, to November 15, 1944.

The facts relating to his separation from employment are as follows:—

The claimant is a military pensioner in receipt of a pension of \$77.53 per month. On November 14, 1944 the claimant was advised that he could not receive a salary from the Dominion Government and at the same time draw his military pension. He was also advised that his pension would be reduced to the extent of his salary. The claimant therefore resigned voluntarily on November 14, 1944 and made application for benefit.

The Insurance Officer was of the opinion that the claimant failed to show just cause for voluntarily leaving his employment and disqualified him from receipt of benefit for a period of 6 weeks from November 15, 1944.

The claimant appealed to a Court of Referees from the decision of the Insurance Officer. The Court gave a majority decision against the claimant.

The claimant appealed to the Umpire from the decision of the Court of Referees.

DECISION

The Umpire's decision was that the claim should be allowed and gave as his reasons that:

The facts disclose that at the time the claimant entered the employ of the Depart-

ment he was not aware of the fact that his pension would be reduced by the amount of his salary and, on November 14, 1944, when he was advised that his pension would be reduced, he was also informed that he would have to refund \$1,589.38, which would be taken off his pension cheque at the rate of \$7.75 per month.

It appears that if the claimant had elected to work in private industry he would have been entitled to continue to receive his full pension and salary. If he had remained with the Department he would have been working, in effect, for \$11.59 per month. In view of these circumstances, the Umpire was of the opinion that the claimant had just cause for voluntarily leaving his employment.

CU-B45*(13 July, 1945)*

The claimant, a married woman, aged 24 years, left her employment voluntarily in order to join her husband, a member of one of the Armed Forces who had been transferred to another city; since his enlistment he had been stationed in various cities for short periods. The facts were not in dispute. The point at issue was whether a married woman is justified under the circumstances outlined above in leaving her employment voluntarily to follow her husband, a member of the Armed Forces—HELD: While a wife has a legal and a moral obligation to live with her husband wherever he has established his residence or domicile, one cannot disregard the unusual circumstances brought about by a state of war. When a man joins the Armed Forces he becomes subject to military discipline and is not free to select his residence as in ordinary times and is subject to posting to whatever military establishment the authorities may designate at any time. In the ordinary sense of the word, the location at which he is posted by the military authorities can hardly be regarded as his residence or domicile. In view of the circumstances the claimant has not shown good cause for voluntarily leaving her employment.

The material facts of the case are as follows:—

The claimant, a married woman, aged 24 years, was employed as a sales clerk in a store from March, 1942 to December 23, 1944 when she left voluntarily, giving as her reason for separation: "Left Voluntarily—Moving".

The claimant filed a claim for benefit in another city at the local office of the Commission on January 15, 1945 and stated on January 30, 1945 that her reason for leaving her last position was because her husband

was in the Armed Forces and had been posted to that city and added that she "would have been discharged in any case because it was a slack season".

The Insurance Officer disallowed her claim and disqualified her from receipt of benefit for a period of six weeks ending on February 3, 1945 because the claimant left her employment voluntarily without just cause.

The claimant appealed to a Court of Referees from the decision of the Insurance Officer and the Court of Referees, by a majority decision, the chairman dissenting, reversed the decision of the Insurance Officer and allowed the claimant's appeal.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees.

DECISION

The Umpire's decision was that the claim should be disallowed and the claimant disqualified for a period of six weeks and gave as his reasons that:

The Insurance Officer's main ground of appeal is that, by reason of the nature of the services performed by members of the Armed Forces, the claimant's husband was only temporarily located at the city to which the claimant had followed him and that he was at all times subject to immediate transfer and that in that sense he could be said to be only temporarily employed at that city; consequently the claimant was not justified in giving up her position to follow him.

It appears that the claimant's husband enlisted in one of the Armed Forces in September, 1942 as an Airframe Mechanic. Since his enlistment, the claimant's husband has been stationed in various cities for periods of eight months, seven months and four months.

The facts of this case are not in dispute. The point at issue is whether a married woman is justified, under the circumstances outlined above, in leaving her employment voluntarily to follow her husband, a member of the Armed Forces.

While a wife has a legal and a moral obligation to live with her husband wherever he has established his residence or domicile, one cannot disregard the unusual circumstances brought about by a state of war. When a man joins the Armed Forces he becomes subject to military discipline and is not free to select his residence as in ordinary times and is subject to posting to whatever military establishment the authorities may designate at any time. In the ordinary sense of the word, the location at which he is posted by the military authorities can hardly be regarded as his residence or domicile. Further, the state of war has resulted in congested living conditions and travel restrictions, and grave difficulties would occur if the wives of those in the Armed Forces were to follow their husbands from place to place.

In view of all these circumstances, I find that the claimant has not shown good cause for voluntarily leaving her employment.

Labour Law

Labour Legislation Enacted by the Parliament of Canada in 1945

OF the legislation passed by the Parliament of Canada during its Session from September 6 to December 18, 1945, two statutes were of special labour interest: an Act to confer certain transitional powers on the Governor in Council during the emergency period following the war and one to provide rehabilitation allowances for veterans. Laws relating to income tax, housing, and war service grants for veterans were amended. Resolutions approving the International Labour Convention for the protection against accidents of dockers and the Convention concerning statistics were adopted by both Houses.

Special Powers of Governor in Council in Transition Period

The National Emergency Transitional Powers Act, 1945, came into force on January 1, 1946, and after that date the war with Germany and Japan is to be considered to have terminated for purposes of the War Measures Act. The new Act will expire on December 31, 1946, if Parliament meets during November or December of that year, or, if Parliament does not meet, on the fifteenth day after the first meeting of Parliament in 1947. Its operation may be extended for not more than one year on address of the Senate and the House of Commons and on Order of the Governor in Council.

The Act enables the Governor in Council to make such Orders as he may consider necessary and advisable for the purpose of: Providing for the armed forces of Canada during the occupation of enemy territory and demobilization and for rehabilitation of members of such forces; facilitating the readjustment of industry and commerce; maintaining and regulating supplies and services, prices, transport, use and occupation of property, rentals, employment, salaries and wages; ensuring economic stability and an orderly transition to peacetime conditions; assisting the relief of suffering and the restoration and distribution of essential supplies and services in any part of His Majesty's Dominions or in foreign countries which are in grave distress as a result of the war; continuing or discontinuing in an

orderly manner, as the emergency permits, measures adopted during and by reason of the war. In particular, it is provided that the Governor in Council may continue in force Orders and Regulations lawfully made under the War Measures Act or pursuant to authority created under that Act and in force immediately before the new Act comes into effect and that he may amend or revoke them under the new Act.

Every Order in Council issued under the new Act is to be published in "Statutory Orders and Regulations" and is to be laid before Parliament within fifteen days or, if Parliament is not then sitting, within fifteen days after the opening of the next session. If, within forty days after an Order in Council is laid before Parliament, the Senate and the House of Commons resolve that it be annulled, it is to cease to have effect but without prejudice to anything done under it.

The Governor in Council may prescribe penalties by way of fine or by way of imprisonment not exceeding five years, or both, for violation of Orders or Regulations made under the Act. Any goods or merchandise dealt with contrary to any such Orders or Regulations may be detained and are liable to forfeiture at the instance of the Minister of Justice upon proceedings in the Exchequer Court or any Superior Court.

Income Tax

A number of changes were made in the Income War Tax Act. In 1945 and subsequent years the capital element in annuities received under contract is to be exempt from taxation. This capital portion is to be based on either the commuted value of the annuity at the time it begins or the amount which the annuitant could have chosen to receive in lieu of the annuity, if such amount is stated in the contract. In any case, the Minister has power to determine what portion of the payment is to be treated as interest for taxation purposes. These provisions do not apply to any payment out of a superannuation fund or plan.

The exemption from tax already granted to the income of limited dividend housing corporations was extended to institutional housing corporations and institutional holding companies as defined by the National Housing Act, 1944.

The income from the investment of an approved superannuation or pension fund or plan was exempted from taxation in the hands of the trustees for 1946 and subsequent taxation years.

In 1946 and subsequent years an amount not exceeding \$900 actually paid by an employer to a superannuation or pension scheme in respect of any employee, officer or director, may be claimed by the employer as a deduction from income. Deductions up to \$900 may be claimed by any employee in respect of amounts retained by his employer from his remuneration as payments into a superannuation or pension scheme in respect of his services for the current taxation year or paid by him to a trade union as part of his union dues and a like amount for payments to a superannuation or pension scheme in respect of services rendered previous to the taxation year. Exemption in respect of payments to a superannuation scheme is conditional on the continuing approval of the scheme by the Minister of National Revenue.

Formerly, the maximum exemption permitted an employer in respect of amounts paid by him to a superannuation scheme was 5 per cent of the aggregate compensation paid to the employees, officers and directors covered by the plan after deducting from such aggregate the excess above \$6,000 paid to any such person. In computing the amount paid by the employer, \$300 was the maximum amount allowed in respect of any person. An employee might formerly claim an amount not exceeding \$300 retained by his employer as payment for a superannuation scheme or paid by the employee to a trade union as part of his dues and a like amount for payments to a superannuation scheme in respect of services in former years.

Where an employee in making contributions to a pension fund was not permitted to deduct his contributions from his income for taxation purposes, he or his dependents will be allowed to deduct a proportion of his pension from income when computing his tax.

An additional tax, the amount depending on the income of the taxpayer, is now payable for 1945 and subsequent years by persons who are entitled to a tax credit on account of dependent children in cases where an allowance has been paid under the Family Allowance Act in respect of such children.

Housing

Amendments in the National Housing Act, 1944, include an increase in the appropriation under Part II of the Act which deals with loans for low-rental housing projects. The Minister of Finance may make loans and pay losses in respect of loans under Part II up to \$150,000,000 instead of \$50,000,000 as formerly. In addition, the Minister may guarantee investments up to \$125,000,000. The amending Act also authorizes the Minister to spend up to \$5,000,000 for housing research and community planning.

Approval of International Labour Conventions

Dockers and Statistics Conventions

Preliminary to their ratification by the Government of Canada, two International Labour Conventions were approved by both Houses of Parliament: the Convention concerning the Protection against Accidents of Workers Loading or Unloading Ships (Revised), 1932, and the Convention concerning Statistics of Wages and Hours of Work in the Principal Mining and Manufacturing Industries, including Building and Construction, and in Agriculture, 1938.

The Dockers' Convention was adopted by the International Labour Conference in 1929, but it was revised in 1932. It lays down in detail the measures to be taken for the safety of workers employed on shore or on board in loading or unloading any ship. These include defining the authority responsible for the enforcement of the regulations, providing for adequate inspection and the posting of the regulations; lighting the approaches and guarding dangerous places on docks and wharves; providing safe means of passing to and from the ship; rules for the construction and arrangement of ladders between the deck and the hold; the construction, maintenance and guarding of hatchways; adequate lighting of working places on board; provision of safe hoisting machinery and competent operators; precautions to be taken in handling of cargo; and arrangements for rendering first aid.

Regulations to give effect to these provisions in Canada were approved by Order in Council made under the authority of the Canada Shipping Act on December 14, 1938 (P.C. 3120) (L.G. 1939, p. 154) and were amended on February 19, 1943 (L.G. 1943, p. 391). The Canada Shipping Act, 1934, which was proclaimed in effect on August 1, 1936, provided for the appointment of Inspectors of Ships' Tackle and for the making of regulations for the protection of workers engaged in loading or unloading ships. The regulations of December, 1938, however, omitted to require the

posting at the workplace of the regulations. This was corrected in February, 1943. Meantime, in February, 1935, both Houses of Parliament passed a Resolution purporting to approve the draft Convention of 1932. This order of procedure, that is approval by Parliament of ratification before the enactment of the legislation, was in accordance with the then Prime Minister's opinion as to the power of Parliament to give effect to treaties to which Canada was a party. However, through a clerical error, a copy of the unrevised Convention was attached to the Resolution. In March, 1939, after the Regulations had been made, the Honourable Norman Rogers, Minister of Labour, took up the matter and a motion was drafted to approve the Convention but the session ended before further action was taken.

The Convention concerning Statistics of Wages and Hours in the Principal Mining and Manufacturing Industries, including Building and Construction, and in Agriculture, requires Members of the International Labour Organization ratifying the Convention to compile, publish, and communicate to the International Labour Office such statistics in the detail and in the manner set forth in the Convention. This Convention is being complied with, in part, by the Dominion Bureau of Statistics, and, in part, by the Department of Labour.

In the House of Commons the Resolutions for approval of the two Conventions were referred on October 22, 1945, to the Standing Committee on External Affairs which, after hearing representatives from the Department of External Affairs, Department of Labour, the Bureau of Statistics of the Department of Trade and Commerce, the Shipping Branch of the Department of Transport, and from the International Labour Office at Montreal, recommended their adoption. The Committee added in its report:—

As regards the inspection of tackle and gear at Canadian ports, particularly the safety measures involved in the protection of workers engaged in the loading and unloading of ships, and in order that Canada may carry out in full the provisions of Convention No. 32 in this respect, your Committee recommends that the Government consider the advisability of increasing the number of inspectors and of providing for a more adequate remuneration for inspectors commensurate with their qualifications, duties and responsibilities.

The report of the Committee was concurred in by the House on December 18, 1945.

In the Senate, the Resolution to approve the Statistics Convention was approved on November 1. The Resolution concerning the Dockers' Convention was referred to the Committee on Immigration and Labour which, on December 7, recommended its approval. This

was given on December 10. The Committee reported that higher salaries were being offered for Inspectors of Ships' Tackle and additional appointments would be made.

Veterans' Legislation

REHABILITATION ALLOWANCES

The Veterans' Rehabilitation Act gives statutory form to provisions which had been in effect under the Post-discharge Re-establishment Order adopted in 1941 (L.G. 1941, p. 1235) and revised in 1944 (L.G. 1944, p. 935). There are also some additional provisions.

The Act authorizes the Minister of Veterans Affairs to make allowances, graduated in proportion to family needs, to veterans, both men and women who:—are willing and able to work but are unable to find suitable employment; are temporarily incapacitated from performing work; are awaiting returns from business, farming or professional undertakings and require money for subsistence; have been awarded a vocational training course to assist them in obtaining employment or better employment. In the case of training and educational benefits the cost of tuition is also paid.

General

Where an allowance is being paid to a veteran under any of the above provisions allowances may also be paid to his dependents.

Not more than one allowance may be paid to a veteran under the Act and no allowance may be paid while the veteran is receiving unemployment insurance benefit. Except where otherwise stated, the total period for which a veteran may receive an allowance may not exceed his period of service or twelve months, whichever is shorter. A veteran may apply for an "awaiting returns" allowance or a vocational training allowance at any time within one year after the date of his establishment under the Veterans' Land Act in farming or commercial fishing.

The Minister, with the approval of the Governor in Council may make regulations to determine the amount of the allowances payable under the Act, to prescribe additional conditions upon which allowances may be paid in special cases, and, generally for the carrying out of the Act.

In determining the amount of any allowance, the Minister may take into consideration any prospective wages, salary, or other income of the veteran and his dependents for the period for which the allowance is to be paid. Except as provided by the Regulations, no allowance may be paid to or on behalf of any veteran

who resides outside of Canada. Allowances paid to veterans taking training are exempt from income tax.

Unemployment Insurance

The benefits of the Unemployment Insurance Act are extended to veterans who enter insurable employment. In calculating benefits in such cases, time spent in military service counts as time spent in insurable employment, the Government paying into the Insurance Fund the contributions which would have been payable in respect of the veteran during that period. A new provision which was not in the Order in Council enables unemployment insurance benefit to be extended to veterans of the armed forces of Allied nations if they were domiciled in Canada before the war and the nation in whose forces they served undertakes to make the same contribution to the Insurance Fund as the Government of Canada makes with respect to its own veterans who enter insurable employment.

The Governor in Council is authorized to take measures to remedy any depletion of the Unemployment Insurance Fund caused by the charge made against it under the Act.

Temporary Incapacity

Allowances in cases of temporary incapacity are payable for a period not exceeding the veteran's period of service or twelve months, whichever is less. No such allowance may be paid for the first thirty days following his discharge, if he is eligible for a rehabilitation grant, or for any period of incapacity more than eighteen months after discharge.

Out-of-Work Benefit

An out-of-work allowance is payable to a veteran who is capable of and available for work and unable to obtain suitable employment. Such allowance is not payable: for the first nine days of unemployment whether continuous or not; for any period of unemployment more than eighteen months after discharge, unless the Minister extends this period in cases where the veteran was at any time during the eighteen months a patient in or receiving treatment from a hospital or health institution or receiving an allowance for temporary incapacity and for a period not exceeding such time; for a time of unemployment exceeding twelve months accumulated during the period prescribed in the preceding clause; to a veteran who would, if his application were a claim for benefit under the Unemployment Insurance Act, be disqualified for benefit by reason of having been discharged for miscon-

duct, leaving his employment voluntarily, participating in a labour dispute, refusing to accept suitable employment, being under 16 years of age, or being an inmate of a prison or other institution; except as prescribed by Regulation, to a veteran who is a married woman; or for the first thirty days immediately following his discharge if he has received or is eligible for a rehabilitation grant. A section of the Order in Council has been omitted from the Act with the result that the veteran will receive out-of-work benefit for the full period of his service up to one year without affecting his unemployment insurance benefits.

Allowances Pending Business Returns

An allowance while the veteran is awaiting returns from his own business or from agriculture may be paid for a period not exceeding the period of the veteran's service or twelve months, whichever is less. No such allowance is payable for the first thirty days following discharge if the veteran is eligible for a rehabilitation grant. Application for an allowance must be made within twelve months after the end of the war or the date of discharge, whichever is later, but where the veteran was receiving treatment from a hospital or health institution or was receiving an allowance for temporary incapacity, he is allowed the additional time involved. A new provision also allows additional time to a veteran who has been delayed in entering business because of licensing or rationing laws or a scarcity of commodities or equipment required for it.

Educational Allowances

Where a veteran takes a course of vocational or technical training to fit him for employment or to enable him to obtain better or more suitable employment, he may be paid an allowance while he is taking the course. Application for the allowance must be made within twelve months after the end of the war or the date of his discharge, whichever is later, but where at any time during the twelve months he was receiving treatment from a hospital or health institution or receiving an allowance for incapacity during that time the period may be extended by such time. The allowance is limited to twelve months except in special cases prescribed by regulation, but in no case longer than the period of service.

An allowance is also payable to a veteran who resumes or commences a course to qualify for admission to a university, a university course to which he is regularly admitted, or a post-graduate course, within a year and three months after discharge, or, in the case of a post-graduate course, as soon as possible after

completing an undergraduate course. In any of the above cases the Minister may delay resumption or commencement of the course beyond the prescribed period because of the veteran's ill-health or other cause satisfactory to the Minister. The allowance is payable for a period not exceeding the veteran's period of service, but the Minister may extend the period of payment in the case of an undergraduate course if the veteran's progress is such that it is in his interest and in the public interest that this should be done and in the case of a post-graduate course that the veteran's achievements are so outstanding that it is in the public interest that the allowance be continued.

The Minister may pay the cost of a correspondence course for an employed veteran where he considers that it is necessary for the full rehabilitation and is related to the veteran's employment, but the amount may not exceed what would have been paid if the veteran were taking a vocational training course for his period of service or twelve months, whichever is less.

A new provision allows the payment of the cost of a correspondence course to a veteran receiving hospital treatment if the Minister considers it necessary for the rehabilitation of the veteran.

Provision is made for payment of the fees and costs of courses of training in cases where a veteran is receiving an allowance in connection with technical, or university courses. New sections enable the Minister, where a veteran is in a hospital or similar institution under the Department of Veterans Affairs Act, to pay the cost of special tuition and training, for training of a technical or educational nature given for therapeutic and pre-vocational purposes or for the restoration of the physical or mental condition of the veteran or in the use by him of devices and appliances designed to compensate him for incapacity. The cost of a correspondence course and vocational training received in hospital or given to aid recovery is not to affect the right to benefit under this or any other Act.

WAR SERVICE GRANTS

Amendments in the War Service Grants Act embody, with some changes, the provisions of certain Orders in Council making regulations for administering the Act. New pro-

visions are: (1) that a Board of Review be established to deal with cases where a war service gratuity is withheld on account of disciplinary action taken against a member of the Forces during his period of service; (2) that receipt of a loan under the Veterans' Land Act on land owned and used by a veteran shall not debar him from receiving re-establishment credit under the War Service Grants Act; (3) that no re-establishment credit shall be available to a member of the Forces unless he resides in Canada and the grant is to be used for his re-establishment in Canada and for the purposes set out in the Act (this last provision does not apply to a member desiring to use the credit for payment of premiums under the Veterans' Insurance Act or the Returned Soldiers' Insurance Act, for the purchase of an annuity under the Government Annuities Act, or for any purposes prescribed by the Governor in Council); (4) that, instead of suspending the payment of a gratuity, the Minister may grant the entire amount of the war service gratuity or re-establishment credit of a veteran who re-enlists or is reappointed to the Forces before he receives it in whole or in part; (5) that any purported assignment, charge or commutation of a gratuity or credit or other such transaction shall be void; and (6) that penalties may be imposed for unauthorized use of a re-establishment credit.

LAND SETTLEMENT

The Veterans' Land Act, 1942 (L.G. 1942, p. 921), which provides financial assistance to veterans in settling on the land was amended to incorporate certain provisions already adopted by Order in Council and to make a number of additions. The total cost to the Director of the Veterans' Land Act of the land, building materials, livestock and equipment sold to a veteran under a contract has been raised from \$4,800 to \$6,000.

Settlement may be made on Provincial or Dominion Crown lands, including land in National Parks and also on Indian Reserve land, thus enabling Indian veterans to settle on Indian lands. The contribution of the Dominion to settlers on Crown or Indian lands is a direct grant of not more than \$2,320 representing the maximum grant to a settler purchasing land and equipment under the Act.

Recent Regulations Under Dominion and Provincial Legislation

THE Merchant Seamen Special Bonus is now payable to some seamen who were formerly ineligible. Henceforth free medical treatment for merchant seamen under a 1943 Order in Council will be payable only for sickness or disability arising before January 1, 1946. The Orders in Council permitting deeper loading than normally permitted of ships during the war have been revoked. Orders and regulations under the War Measures Act have been continued in force under the National Emergency Transitional Powers Act.

In Alberta, the trade of a motor vehicle mechanic is now under the Apprenticeship Act. In British Columbia, the Control of Employment of Children Act now applies to the mercantile and transport industries, to shoe-shine stands and automobile service stations. Boxing Day, December 26, 1945, was declared a holiday by proclamation for the purposes of the Factories Act. The annual supplementary minimum wage orders and the hours of work order regulating overtime in the mercantile industry during the Christmas holidays were issued in November. In New Brunswick, the regulations concerning boilers and pressure vessels have been amended and certificates to boiler inspector candidates will

no longer be issued. In Ontario, time credit will be given to operating engineers who have been in the Armed Forces when they apply for a higher grade of certificate, and ex-servicemen who have completed a six months' course in stationary engineering at a training and re-establishment institute or who have had six months' operating experience may now write the examination for a fourth class stationary engineer's certificate. In Quebec, an apprenticeship commission for the building and engineering construction trades of Chicoutimi and district has been incorporated under the Apprenticeship Assistance Act. A new minimum wage order for teachers employed by the Verdun Catholic School Board has been issued, and a number of orders have been renewed until January 1, 1947. In Saskatchewan, a syllabus of training has been issued for apprentices in the motor-vehicle repair, carpentry, bricklaying and masonry, plastering, sheet-metal, and plumbing and steamfitting trades. The Minimum Wage Act has been extended to apply to employees of the Public Service, government commissions, and municipal corporations, and to domestic servants who are employed in private dwellings where more than five beds are set apart for the use of boarders or lodgers.

Dominion

Merchant Seamen

Medical Care

An Order in Council (P.C. 7479) of December 28, 1945, gazetted on January 7, stipulates that the free medical treatment for merchant seamen for non-pensionable liabilities incurred while serving on ships operating in war zones which was authorized by the Order in Council (P.C. 164/6991) of September 4, 1943 (L.G. 1943, p. 1417) will now be given only for sickness or disability arising before January 1, 1946. The Merchant Seamen Compensation Regulations, 1945 (L.G. 1945, p. 1347), require workmen's compensation to be paid by the employer in case of death or injury to a seaman by accident in the course of employment.

Special Bonus Order

An Order (P.C. 3227), providing for certain seamen a special bonus of 10 per cent of their total earnings at the end of the war (L.G. 1945, p. 913), has been amended by an Order in Council (P.C. 18) of January 11, 1946, gazetted on January 21.

The qualification that a seaman, to be eligible for the bonus, must agree in writing before August 31, 1945, to serve at sea for the duration of the war has been changed by the addition of "or such other dates as may be determined by the Minister" [of Transport]. Seamen serving under Canadian Articles of Agreement on a ship owned in Canada but registered as a British ship elsewhere are made eligible for the bonus and the Bonus Order now applies to ships of British registry plying to or from Canadian ports through dangerous waters provided they engage and discharge their crews in Canada.

The allowance paid to a Canadian seaman for the period of his detention by the enemy is to be added, the amendment stipulates, to the seaman's earnings, for the purposes of calculating the special bonus. Seamen who joined the Armed Forces after serving at sea will be paid the bonus as soon as practicable after their discharge, rather than upon discharge. The bonus in respect of an eligible seaman who died before the coming into force of the Order, may, if the amount does not exceed \$500, be paid in a lump sum to his next-of-kin instead of his legal representatives.

Orders Under the War Measures Act

An Order in Council (P.C. 7414) of December 28, 1945, made under the National Emergency Transitional Powers Act, continues in full force all orders and regulations made under the War Measures Act which were in force on December 31, 1945.

Loading of Ships

An Order in Council (P.C. 7314) of December 11, gazetted on December 17, 1945, revoked four Orders in Council (P.C. 2243 of March 23, 1942; P.C. 7991 of September 5, 1942; P.C. 4357 of May 27, 1943; and P.C. 4817 of June 14, 1943) which permitted deeper loading than

normally permitted of ships during the war emergency (L.G. 1943, p. 1031).

Other Orders

The following Orders in Council are summarized elsewhere in this issue: P.C. 16 authorizing the Dominion Government to contribute towards the cost of replacing machinery used in war emergency training; P.C. 115 revoking P.C. 5531 which provided for the appointment of a Controller of the business of the American Can Co. Ltd., Vancouver, B.C.; P.C. 348 amending the Wartime Wages Control Order; and P.C. 349 amending the Wartime Salaries Order.

Provincial

Alberta Apprenticeship Act

The trade of a mechanic engaged in the repair and construction of motor vehicles was designated as a trade under the above Act by an Order in Council of January 2, 1946, gazetted on January 15.

British Columbia Control of Employment of Children Act

The application of this Act which prohibits the employment of boys and girls under 15 years of age without written permission from the Minister of Labour was extended by an Order in Council of January 10, 1946, gazetted January 17, to the mercantile industry (all establishments operated for the purpose of wholesale or retail trade), shoe-shine stands, automobile service stations, and the transport industry, not including transport by rail, water, or air, or transport of property owned by the carrier. As a consequential amendment, the clause is struck out of the Schedule which brought within the Act those shops or stands for the sale of fresh fruits, vegetables, soft drinks, cut flowers and dairy produce which are exempt from the Shops Regulation and Weekly Half Holiday Act.

The Control of Employment of Children Act applies to factories, including shipyards and electric power works, logging, construction, catering and places of amusement.

British Columbia Factories Act

Boxing Day, December 26, 1945, was declared a holiday for the purposes of the above Act by a proclamation of November 26, gazetted December 13. A similar proclamation in October declared November 12, 1945, Armistice Day, a holiday (L.G. 1945, p. 1844).

British Columbia Minimum Wage Acts and Hours of Work Act

The annual Supplementary Orders 24 and 59 under the Female and Male Minimum Wage

Acts, respectively, and the temporary order under the Hours of Work Act, permitting overtime and requiring punitive payments in the mercantile industry during the Christmas season were issued on November 27, and gazetted on November 29.

The hours Order permitted workers in retail stores in Vancouver and district, Victoria, Esquimalt, Oak Bay and Saanich to work two hours overtime on December 22 and 24. Three hours overtime on December 22 and two hours on December 24 could be worked by such employees in other parts of British Columbia.

For time worked beyond eight daily on December 22 and 24, or over 48 hours during the week ending December 22, the minimum wage Orders required time and one-half the regular rates, but no special overtime payment was required for Saturday, December 22, for shops outside the above-mentioned cities. The weekly rate for experienced employees was to be paid to all girls and women temporarily employed 40 hours or more weekly between November 29 and December 31, inclusive, and both male and female temporary part-time workers were to receive during this period at least 35 cents an hour whatever their age or experience. The regular daily guarantees of \$1.40 for females over 18, \$1 for those under 18, and four hours' pay for males, however, were removed during this time.

Another female minimum wage Order, 52T, of November 26, gazetted November 29, which applies to the hotel and catering industry and became effective January 2, 1946, repeals a previous Order (52Q), which was never put into effect and two Orders (52R and 52S) which postponed the effective date of Order 52Q. The first Order, 52Q, had purported to forbid the employment of a female between midnight and 6 a.m. unless she worked continuously during that time, and to prohibit the beginning or ending of a shift on which women were employed between those hours. Women, however, during this period, could be

given time off for meals or rest periods on the employer's premises (L.G. 1945, p. 1698). The new Order, 52T, prohibits the employment of women in hotels and in the catering industry between 1.30 a.m. and 6 a.m., but exempts from this provision workers in the catering departments of hospitals, sanatoria and nursing homes who reside on the premises, those exempted in writing by the Board of Industrial Relations and all employees in the industry on Christmas Day, New Year's Day, and on any other days specified by the Board.

New Brunswick Steam Boiler and Pressure Vessel Act

Regulations issued under this Act in January, 1945 (L.G. 1945, p. 1532) were amended by an Order in Council of December 20, 1945, gazetted on January 2, 1946. A definition of "pressure vessel" has been added, it being defined as any tank, vessel, refrigeration plant or accessories thereto containing gas, air or liquid under a pressure greater than 15 lbs. per square inch, but not including a boiler or a pressure vessel on a locomotive operated by a railway company, one in a private residence, or a vessel used for agricultural purposes only.

The earlier regulations set out the qualifications of candidates for stationary engineers' certificates of a first-, second- or third-class and for boiler inspectors' certificates. All references to boiler inspectors are now struck out. New sections list the fees for the inspection of boilers and pressure vessels and stipulate that no person shall use a pressure vessel unless it is insured, and the user has a certificate of inspection and approval signed by an Inspector of Boilers. The inspector must attach to the vessel an identification card showing the date of inspection and the allowable working pressure.

Ontario Operating Engineers Act

An amendment by an Order in Council of November 8, gazetted December 1, to the regulations under this Act (L.G. 1937, p. 1207) widens the scope of an amendment of July 28, 1945, to permit an ex-serviceman who has completed a six months' course in stationary engineering at any training and re-establishment institute to write the examination for a fourth-class certificate as stationary engineer. The earlier amendment had limited this provision to ex-servicemen who had completed the six months' course at the Ontario Rehabilitation Training Institute or who had six months' operating experience and had provided for time credit for operating engineers who

have been in the Armed Forces when they apply for a higher grade of certificate.

Quebec Minimum Wage Act

TEACHERS IN VERDUN

A new minimum wage Order covering teachers employed by the Catholic School Board of the City of Verdun was approved by an Order in Council of January 3, 1946, which was gazetted on January 26. This new Order 9 will be in force from February 1, 1946, to January 1, 1948, and replaces Order 9 of the Fair Wage Board which has been in force since July 1, 1938 (L.G. 1938, p. 626).

The new rates are higher than the former ones. For women, the former range of \$625 to \$1,000 with an annual increase of \$75, is replaced by a range of \$1,000 to \$2,000 for teachers in the first seven grades, the annual increment for experience being \$50 for the first four years and \$100 thereafter. For teachers of the 8th or 9th grade the maximum is \$2,200, the annual increment for experience being \$100; for those teaching the 10th, 11th or 12th grade and for assistant principals for classes lower than those of the 8th grade, \$2,400; for assistant principals of schools of the 8th and 9th grades, \$2,500; for assistant principals of schools including the 10th, 11th, or 12th grade and principals of schools with classes lower than those of the 8th grade, \$2,700; for principals of schools containing classes lower than the 10th grade, \$2,800; for principals of the 10th, 11th and 12th grades, \$3,000.

For men, the equivalent rates are a range of \$1,200 to \$2,900 for single men and \$1,500 to \$2,900 for married teachers of the first seven grades, the annual increment for experience being \$125. The former range was from \$900 to \$2,500 for unmarried men and from \$1,200 to \$2,500 for married men. For those teaching 8th or 9th grade, the maximum is \$3,200; \$3,500 for those teaching the 10th, 11th or 12th grade or for assistant principals with grades below the 8th; \$3,600 for assistant principals for classes including 8th or 9th grade; \$3,800 for assistant principals of classes including the 10th, 11th or 12th grade; \$3,700 for principals of schools comprising classes lower than the 8th grade; \$3,800 for principals of schools with classes lower than the 10th grade, and \$4,000 for principals of schools with classes of the 10th, 11th or 12th grade.

Men and women teachers who are not employed full-time, but who give special courses regularly must be paid at least \$2 and \$1.75 per hour respectively; those replacing, temporarily, regular teachers are to be paid \$8 per day in the case of males and \$6 in the case of females.

MISCELLANEOUS

The following Ordinances have been renewed until January 1, 1947, by an Order in Council of November 22, 1945, gazetted December 1: Ordinance No. 6, governing stationary engineers and firemen in the Montreal district; No. 8, cotton textile industry; No. 11, charitable institutions, hospitals and homes; No. 22, manufacture of bricks and building blocks; No. 23, taverns in the Montreal district; No. 25, waste materials industry; No. 26A, taxicabs and automobiles for hire in the Montreal district; No. 27, canning industry; No. 31, tailors and dressmakers of Quebec City; No. 32, the mattress and upholstering industry in Quebec, Quebec West and Levis; No. 33, wholesale foodstuffs in the Quebec City district; No. 34, the ice industry and ice-trading in Quebec and district; No. 36, foundries in Hull; No. 39, forest operations; and No. 45, glaziers.

Quebec Apprenticeship Assistance Act

The Apprenticeship Commission of the Building and Engineering Construction Trades of Chicoutimi has been incorporated under the above Act (L.G. 1945, p. 1351) by an Order in Council of January 17, 1946, gazetted on January 26. The Act was passed in 1945 to promote apprenticeship, including training for the rehabilitation of disabled workers and war veterans. The Act provides for the incorporation of regional or local apprenticeship committees for various trades.

Saskatchewan Minimum Wage Act

This Act has been extended by Order "O", approved by an Order in Council of December 14, 1945, gazetted December 31 and effective January 2, 1946, to apply to persons employed by the Public Service, departments of the Government, boards and commissions set up by the legislature, and by municipal corporations, and to domestic servants who are employed in private dwellings where more than five beds are set apart for the use of boarders or lodgers.

The new Order rescinds Order K (L.G. 1944, p. 1413), which exempted these employees from the Act in addition to those in agriculture and domestic service. The Act, therefore, applies

now to all workers in municipalities of 500 or more people (L.G. 1945, p. 1699), except domestic servants and workers in agriculture.

Saskatchewan Apprenticeship Act

A syllabus of training for a 13-week course in the motor-vehicle repair, carpentry, brick-laying and masonry, plastering, sheet-metal, and plumbing and steamfitting trades was issued in an Order in Council under this Act (L.G. 1945, p. 1844) on December 18, 1945, and gazetted on December 31.

Motor-vehicle repair trade subjects are shop mathematics, elementary drafting and blueprint reading, tools and equipment and their care and use, engines, chassis, clutch, transmissions, differential, brakes and wheel alignment, automotive electricity, tune-up, fuel and lubrication, and bench fitting and welding.

Carpentry apprentices will study shop mathematics, elementary drafting and plan reading, the care and use of tools, materials, operation and care of woodwork machines, bench work and finishing, fastenings, form work, framing, trimming, interior fixtures, estimating, and building regulations.

The bricklaying and masonry course will include applied mathematics, architectural drawing, plan reading, designing and estimating, the study of materials, the use of transit, practice in laying bricks, openings (sills and heads), the study of arches, scaffolding and hoisting, fire-places and chimneys, building by-laws and accident prevention.

Plastering apprentices will study applied mathematics and drawing, materials, plain interior and ornamental interior and exterior plastering on panels, plain interior cement work—stucco, and repairing surfaces, interior and exterior.

Sheet-metal apprentices will learn shop mathematics, drafting and elementary blueprint reading, the care and use of tools and equipment, about materials, layout work, construction (joints, seams, fittings, etc.), heating principles and designing, ventilation and air-conditioning, soldering, brazing and riveting, roofing, welding and estimating.

The plumbing and steamfitting subjects are mathematics, blueprint reading, draining and ventilation, water supply, soldering and lead work, finishing, gas fitting, and maintenance and repair.

Employment, Hours and Earnings

Summary

REPORTS received in the Department of Labour during the past month gave the following information concerning employment and unemployment in Canada.

Employment and payrolls at the beginning of December, 1945.—Widely-distributed advances in industrial employment were shown in reports received by the Dominion Bureau of Statistics.

The index number of employment, calculated on the 1926 average as 100, rose from 171.2 at November 1 to 172.9 at December 1, compared to 185.7 at December 1, 1944.

The greatest increase took place in logging, with smaller but nevertheless considerable improvement shown in mining, communications, transportation, construction and services. Manufacturing continued to decline, however. This decline as a whole was in accordance with the usual seasonal movement in the pre-war period; although the number released was substantially above-average, the percentage reduction approximated the usual period drop at December 1.

Reports from 15,577 employers in eight leading industries, recorded an increase of 17,895 persons or one per cent in their staffs.

Weekly per capita earnings showed a seasonal falling off. The average was \$31.64 as compared with \$31.95 at November 1, 1945 and \$31.61, \$30.67 and \$27.32 on December 1, 1943, 1942, 1941 respectively.

Unemployment as reported by the Unemployment Insurance Commission.—Claims for Unemployment Insurance benefit during December numbered 57,612, an increase of 4,287 over the preceding month.

Report on Employment Conditions, January, 1946.—For the first time in several months, the number of unfilled vacancies reported by National Employment Service offices showed a slight increase during January, while the number of unplaced applicants continued to rise sharply. At January 24, the available labour supply as indicated by the number of unplaced applicants registered at employment offices, totalled 220,459 as compared with 185,274 at December 21, five weeks earlier. Manpower requirements of Canadian industries, exclusive of

agriculture, increased by 3,180 during the five weeks to total 82,721 (52,717 men and 30,004 women) at January 24. This rise was due to the increased demand for both skilled and unskilled female workers which more than offset the continued slackening in male requirements.

Man-Hours and Hourly Earnings, December 31, 1945.—Average hours per week worked by hourly-rated wage-earners employed in manufacturing were 44.8 at the beginning of December, as reported by employers. Average hourly earnings were 67 cents.

Applications for employment; vacancies and placements, December, 1945.—Reports received from the National Employment Service Offices of the Unemployment Insurance Commission during the four weeks November 30 to December 27, 1945, showed sharp declines in business transacted both when compared with the preceding four weeks ending November 29, and with the four-week period December 1 to December 28, 1944. All industrial groups showed losses under the first comparison, the most pronounced being in manufacturing, forestry and logging, construction, trade and services. In comparison with the four weeks December 1 to December 28, 1944, apart from minor increases in construction, mining, agriculture and fishing, hunting and trapping, all industrial divisions recorded losses, the most pronounced being in manufacturing, forestry and logging, services and trade. Vacancies during the four weeks ending December 27, 1945, numbered 110,275, applications 166,070 and placements in regular and casual employment 70,547.

Unemployment in trade unions at the close of the quarter ending December 31, 1945, and for the year 1945.—Unemployment in trade unions rose to 3.0 per cent at the end of the December quarter; an increase of more than twice 1.4 per cent recorded for September 30, 1945. This is the highest average since April, 1942.

Average unemployment for 1945 was 1.4 per cent, as compared with 0.5 recorded for 1944. It is the highest yearly average since 1942, when 2.2 per cent was registered.

Survey of Civilian Labour Force.—The first of a series of surveys of the civilian labour force to be undertaken quarterly by the Dominion Bureau of Statistics indicates

that in the week November 11-17, 1945, there were 4,364,000 persons employed, and 167,000 unemployed, making a total labour force of 4,531,000.

Employment and Payrolls at the Beginning of December, 1945

INDUSTRIAL employment at the beginning of December showed widely-distributed advances; these were not so large as those indicated at November 1, 1945, being also smaller than the gain at December 1 in any of the three years immediately preceding. Prior to 1941, however, the trend at December 1 had almost invariably been downward. The Dominion Bureau of Statistics in its latest survey tabulated data from 15,577 employers in the eight leading industries, whose working forces totalled 1,768,635, as compared with 1,750,740 at November 1. This increase of 17,895 persons, or one per cent, was accompanied by that of 0.1 per cent in the aggregate weekly salaries and wages disbursed by the co-operating establishments.

The general index number of employment at December 1, 1945, stood at 172.9, as compared with 171.2 in the preceding month, and 185.7 at December 1, 1944. The 1926 average equals 100 in calculating these indexes. Since the expansion at the date under review was contrary to the seasonal tendency in pre-war years, the seasonally-adjusted index showed a further rise, standing at 168.8, as compared with 163.8 in the preceding report. Employment generally was lower by 6.9 per cent than at the beginning of December in 1944, since when the index number of payrolls has fallen by 8.4 per cent.

The greatest increase at December 1, 1945, was in logging, which provided work for an additional 13,892 persons, and in trade, in which the advance of 10,567 was also above the average at December 1. There was smaller but nevertheless considerable improvement in employment as compared with November 1 in mining, communications, transportation, construction and services. On the other hand, activity in manufacturing continued to decline; this was partly due to seasonal causes, but more important factors in the contraction were industrial disputes, (which seriously affected the situation both directly and indirectly), cancellation and completion of war contracts, and slackening of operations during reconversion to peace-time production. The largest reductions were in iron and steel plants, from which nearly 11,400 men and women were laid off; lumber, vegetable food, pulp and paper, beverage, chemical, non-ferrous metal and miscellaneous

manufactured product factories also released employees. The decline in manufacturing as a whole was in accordance with the usual seasonal movement in the pre-war period; although the number of persons released was substantially above-average, the percentage loss approximated that indicated, on the average, at December 1 in the period since 1920.

It is interesting to note that due to continued recessions in manufacturing and growing activity in the non-manufacturing divisions, the distribution of employment between these two broad groups is becoming much closer to the normal than was the case during recently preceding years. Thus at December 1, 1945, 54.7 per cent of the total persons in recorded employment in the eight leading industries were on the payrolls of manufacturers, the non-manufacturing classes accounting for 45.3 per cent of the total of 1,768,635. Those proportions do not greatly differ from those of 52.3 per cent in the manufacturing and 47.6 per cent in the non-manufacturing divisions as indicated at December 1, 1939, but show considerable variation from the distribution at December 1, 1943, when industrial activity was at an all-time record for that date; 63 per cent of the total working force was then reported by manufacturers, only 37 per cent being reported in the remaining industrial divisions taken as a unit.

Payrolls

The aggregate payroll of \$55,962,031 disbursed in weekly salaries and wages at December 1 by the co-operating employers was 0.1 per cent higher than the sum of \$55,931,943 paid at the beginning of November. The weekly per capita earnings showed a seasonal falling-off at the date under review, when the average was \$31.64, as compared with \$31.95 at November 1; at the beginning of December, 1944, the mean had been \$32.19, while in 1943, 1942 and 1941, the December 1 averages were \$31.61, \$30.06 and \$27.32, respectively.

Including the data received from financial institutions, the latest survey of employment and payrolls shows that the number of persons in recorded employment was 1,838,554, as compared with 1,820,472 at the beginning of

November. The amounts received in weekly earnings by these persons were stated as \$58,348,568 paid on or about December 1, and \$58,312,504 paid on or about November 1. The average weekly earnings in the nine main industries, including finance, were \$31.74, as compared with \$32.03 at the beginning of November, 1945, \$32.20 at December 1, 1944, \$31.61 at December 1, 1943, and \$30.08 at December 1, 1942.

Table II summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas and the 20 leading industrial cities, and gives comparisons as at November 1, 1945, and December 1 in 1944 and 1943. In Table I appears a monthly record for the eight leading industries as a whole, and for manufacturing, showing the movements of employment and payrolls from 1941.

The index number of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100. The table shows that in the period for which data are available, there has been an increase of 13.2 per cent in the number of persons in recorded employment in the eight leading industrial groups, while the aggregate weekly payrolls of these employees have risen by 39.3 per cent.

Including finance, the gain in employment from June 1, 1941, to December 1, 1945, amounted to 13.4 per cent, and that in payrolls, to 39.3 per cent. The reasons previously given for the much greater rise in the salaries and wages than in employment may again be stated: (1) the greater-than-normal concentration of workers still existing in the heavy manufacturing industries where rates of pay are above the average and, in addition, there has been a considerable amount of overtime work, although this is of diminishing importance; (2) the payment of cost-of-living allowances to the majority of workers; the rates at which these allowances were calculated were increased on more than one occasion before their incorporation in the basic wage-rates as from February 15, 1944; (3) the progressive up-grading of employees as they gained experience in their work and (4) the granting of higher wage rates in numerous cases.

Until recently, the increase in employment and payrolls in manufacturing in the period of observation has greatly exceeded that in the non-manufacturing industries taken as a whole, but at November 1 and December 1, the reverse was the case; thus, the index of employment in manufacturing at the date under review was higher by 9.5 per cent than at June 1, 1941, and that of payrolls, by 36.7 per cent, while in the non-manufacturing divisions taken as a unit the gain in the same

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

comparison amounted to 18 per cent in the case of the employment, and to 42·7 per cent in the case of payrolls. In the last 4½ years, the weekly earnings of the typical individual engaged in factory work have increased by 26·9 per cent, while the average in the non-manufacturing industries taken as a unit has risen by 23·1.

In regard to the marked variation shown in the average earnings of workers in the different industrial classes, it must be borne in mind that the sex distribution of such persons

is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in different industries is obviously an exceedingly important factor.

¹ The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

Man-Hours and Hourly Earnings, December 1, 1945

A CONTINUED decline in average hourly earnings of wage-earners in manufacturing was reported by the Dominion Bureau of Statistics. At December 1, 1945, the average was 67 cents an hour, a decline of half a cent from the previous month and of 3½ cents from December 1, 1944.

Average hours worked remained fairly stable, at 44·8 per week.

The latest reduction in average hourly earnings in manufacturing was the seventh consecutively reported. As in preceding periods of observation, the more important factors contributing to the decline were significant changes in the number and in the industrial distribution of wage-earners during the period of conversion from wartime to peacetime production, and industrial disputes, which continued directly and indirectly to affect the situation to a considerable degree. Further reductions in overtime work were also indicated, although this was a factor of diminishing weight; the Ontario Hours of Work and Vacations With Pay Act, which came into effect at the first of November, tended to reduce the hours worked in some industries.

Statistics were tabulated from 6,111 employers having 708,346 hourly-rated wage-earners at the date under review, as compared with 718,876 at November 1. The latest indicated total of hours worked was 31,726,261, for which the remuneration amounted to \$21,241,170; the hourly-rated personnel employed by the same firms at November 1 had worked a total of 32,292,443 hours, for which they were paid the sum of \$21,798,373. There was thus a reduction of 1·5 per cent in the number of wage-earners,

accompanied by that of 1·8 per cent in the aggregate hours worked and of 2·6 per cent in the hourly wages.

The statistics of average hours per week and average hourly earnings in manufacturing during the period for which such information is available are given below; the latest figures are subject to revision.

Average Hours Worked.—The falling-off in the average hours worked in the Dominion in manufacturing as a whole in the week ending December 1 as compared with a month earlier was slight. There were moderate gains in this comparison in all provinces except Ontario, Alberta and British Columbia. While the average reported at December 1 for the week preceding was fractionally lower than at the beginning of November, it exceeded the means indicated during the summer months, which had reflected holiday conditions. It was however, considerably lower than the average at December 1, 1944. Plants producing durable manufactured goods reported hours averaging 45 per employee in the week ending December 1, one-fifth of an hour less than in the week ending November 1, and some two hours less than in the same week in 1944. There were declines in both comparisons in the iron and steel, non-ferrous metal, electrical apparatus and other groups coming within this category, in which the aggregate hours fell in the month by 3·9 per cent. The accompanying loss in the number of hourly-rated wage-earners amounted to 3·3 per cent.

In the light manufactured goods industries, there was an increase of 0·3 per cent in the total hours reported as having been worked in the week preceding December 1, while the

¹ The averages at January 1 and April 1, 1945, were affected by the time lost during the year-end and the Easter holidays, respectively.

gain in the number of hourly-rated wage-earners was also 0.3 per cent. The average per employee was, therefore, unchanged at 44.6; this figure was lower by more than half an hour than that indicated at December 1, 1944.

Average Hourly Earnings.—The hourly earnings in manufacturing in the week ending December 1 averaged 67 cents, as compared with 67.5 in the week of November 1, 1945, and 70.5 in the week of December 1, 1944. Further important declines in the numbers engaged in the vehicle and other high-paid industries, contributed to the lower rate; the existence of industrial disputes in the automotive division continued a factor in the situation. In the last 21 months, the average hourly rate in manufacturing as a whole has fallen by nearly five per cent, due in part to curtailment of overtime and in part to far-reaching changes in the industrial distribution of wage-earners; the effect of these factors was heightened by losses due, directly and indirectly, to strikes.

Average Weekly Wages.—Column 3 of the accompanying table shows the weekly earnings of hourly-rated personnel in factories at the first of each of the months since October, 1944. The effect of reductions in the time worked and of changes in the industrial distribution in the last 12 months is reflected in the loss of some \$2.60 in the average weekly earnings of hourly-rated wage-earners in manufacturing as a whole; it should be noted, however, that relatively few of the industries within the manufacturing group show declines of this size.

There was a reduction of 23 cents in the average of salaries and wages paid at December 1 as compared with November 1; the loss in weekly earnings in the case of hourly-rated workers was 29 cents. In the heavy manufactured goods industries, in which industrial disputes continue seriously to affect the situation, the decrease for salaried personnel and wage-earners (hourly-rated and otherwise) was 43 cents, and that among hourly-rated workers was 62 cents. In the case of the light manufactured goods industries, an insignificant gain of one cent in the weekly earnings of all the employees reported by the co-operating establishments was accompanied by that of four cents in those of the hourly-rated staff.

In the last 12 months, the weekly earnings of all those in recorded employment in manufacturing have fallen by approximately 97 cents, while those of hourly-rated wage-

earners have declined by some \$2.60. As already stated, the most important factors contributing to these losses are reductions in the numbers employed, accompanied by important changes in their industrial distribution, diminution in the hours worked, and industrial disputes, the last-named affecting the situation directly and indirectly. In the case of the durable manufactured goods industries, the falling-off in the year amounted to \$1.66 in the combined salaries and wages, and to \$3.28 in the earnings of hourly-rated personnel. Firms classified in the light manufacturing industries showed an increase of about 62 cents in the combined salaries-and-wages figure, while the average weekly earnings of hourly-rated wage-earners have declined by 41 cents in the year. Also in this period, the average hours worked by hourly-rated personnel in the heavy manufactured goods industries have fallen by almost two hours, a loss which was accompanied by that of four cents in the hourly rate; in the case of the light manufacturing industries, the average time worked decreased by less than one hour, and the rate has risen by three-tenths of a cent per hour.

Non-Manufacturing Industries

Many of the non-manufacturing industries employ comparatively few of their workers at hourly rates, with the result that accurate records of hours worked are not available. The representation of the non-manufacturing industries in the monthly statistics of man-hours and hourly earnings is accordingly much smaller than that in manufacturing. At a later date, however, it is hoped that the representation in several important industries will be extended, permitting the publication of monthly figures for such groups.

The hours worked in mining in the week of December 1 showed a small increase as compared with the week of November 1, averaging 44.3, as compared with 44 in the preceding period of observation. The average hourly earnings rose fractionally to 85.3 cents at the first of December, as compared with 84.8 cents at November 1. In building construction, the hours worked slightly declined, while there was no general change in the hourly rate. The hours worked, on the average, in the highway group were lower, the mean being 33.7 hours in the week ending December 1, as compared with 36.2 in that of November 1. The hourly rate also slightly declined, falling from 63.4 in the last report, to 63.1 in the present survey.

Report on Employment Conditions, January, 1946

The following report covering the employment situation for the past month has been prepared by the Research and Statistics Branch, Department of Labour, in co-operation with the Employment Service, Unemployment Insurance Commission. The first section of the report deals with the Canadian labour market by occupational groups, while the second section gives a more detailed analysis of employment conditions by regions.

THE steadily downward trend in the number of unfilled vacancies¹ reported during the past few months reversed during January while the number of unplaced applicants² continued to increase. The rise in demand during January was due primarily to the additional orders for female workers in the Ontario Region. Manpower requirements, however, remain at a low level due to shortages of skilled labour and basic materials as well as to the normal seasonal slackening in industry needs. For the most part, demand represents vacancies resulting from labour turnover rather than from employment expansion. The supply of available labour increased substantially during the month as the backlog of discharges and temporarily employed Christmas workers registered for work at the local offices. The number of vacancies reported in Canadian industries, exclusive of agriculture, totalled 82,721 while unplaced applicants at that time numbered 220,459. This presents a decidedly different picture from the labour situation at the comparative date in 1945 when 122,486 vacancies were reported and the number of applicants totalled 81,783. Table I shows labour demand and supply by main occupational groups and by sex, as at January 24, 1946. Table II presents a monthly comparison of total labour demand and supply. In Table III unfilled vacancies are classified by main industry group and by sex, as at January 24, 1946, with absolute and percentage

Male

The number of male applicants seeking employment rose substantially during January, as temporarily employed holiday workers and discharges who had postponed job-hunting

until the new year entered the labour market. changes in total demand during the past month.

At January 24, the number of unplaced male applicants totalled 177,519 as compared with 150,583 five weeks earlier. Demand for male workers, however, remained at a low level, totalling 52,717 at January 24. The slight increase in the need for male workers which was evident during the first part of January was more than offset by the sharp decline in demand during the last week of the period under review. The reduced demands of the logging camps accounted for most of this decrease.

Skilled and Semi-skilled Workers

Since V-J Day there has been a steady decline in the vacancies reported for skilled and semi-skilled workers while the number of applicants seeking this type of work has increased substantially. Many of those classified as skilled and semi-skilled, however, are not fully qualified and, therefore, cannot meet the high standards which employers are now requesting. At January 24, demand for skilled workers totalled 36,204 while applicants registered in local offices numbered 67,959; 63 per cent of the labour requirements were for skilled loggers but experienced woods workers were in short supply.

The ideal weather conditions for logging operations throughout the Dominion, have resulted in a renewed campaign for additional labour for the logging camps. Although advertising has been extensive and transportation costs are now authorized, the recruiting of workers has been disappointing. In some places, applicants are reluctant to accept work in the logging camps so late in the season as they wish to be available for construction work in the early spring. The number of experienced loggers needed across Canada at January 24 totalled 22,711; every region was in need of additional woodsmen, but demand was particularly acute in Quebec, where 14,278 skilled loggers were required.

Although the shortage of experienced miners has been considerably relieved by the re-instatement of discharged service personnel, there were still 1,618 skilled miners required at January 24. The number of skilled miners available, however, was limited; at the January date the supply was only one-third of the demand. The lack of suitable housing accommodation has seriously hampered placements in the mining industry, but this situation will be remedied in some areas when summer living quarters can be used. Approxi-

¹ Unfilled Vacancies are the number of unfilled jobs on file in employment offices as at the date indicated.

² Unplaced Applicants are the number of Unreferred Applicants plus Unconfirmed Referrals. Unreferred Applicants are those who have not been referred to specific jobs as at the date indicated. Unconfirmed Referrals are applicants who have been referred but whose placement has not been confirmed.

mately two-thirds of the demand at January 24 was for experienced coal miners. The acute shortage of certificated coal miners in the Maritime and Prairie Regions continues to curtail the number of inexperienced workers who can be placed in the coal mines.

The seasonal low in building activity has resulted in a large surplus of construction workers. This situation is only temporary, however, as the extensive construction program

outlined for 1946 will greatly increase the demand for this type of worker. There were 13,706 construction workers seeking employment at January 24 but there were only 2,195 vacancies on file. Carpenters and painters, especially, were in generous supply, but many of these applicants were only qualified for general construction work. A shortage of bricklayers, however, still persists, particularly in the Quebec and Ontario Regions.

LABOUR DEMAND AND SUPPLY

(Excluding Agriculture)

UNFILLED VACANCIES AND UNPLACED APPLICANTS
CANADA 1945

All Scales in Thousands

Mass lay-offs from war industries have resulted in a large surplus of metalworkers who have mastered a routine skill but are not proficient in the general trade. At January 24, there were 16,734 metalworkers seeking employment but only 1,917 vacancies were recorded in the local offices throughout the Dominion. The largest surplus of metalworkers was in Quebec where only 6 vacancies were reported for every 100 applicants registered. Machinists, welders and flame cutters, particularly, were in excess supply. There remains, however, an urgent need for experienced moulders and coremakers; to insure a sufficient supply in the future, employers are hiring inexperienced workers for "on the job" training.

Unskilled Workers

Since the peak in demand for unskilled workers of approximately 60,000 at V-E Day, requirements have steadily declined and by January 24, only 9,340 workers were needed. The labour supply, however, has steadily increased; at January 24, there were 75,590 applicants registered as unskilled workers. Over half of these are classified as light labour, including many elderly or handicapped workers who had greatly aided the war effort but are not easily placed in peace-time industries. In the Quebec region, particularly, unskilled workers were in excess but this situation should be considerably relieved with the completion of many of the industrial projects now underway.

Female

Contrary to the downward trend in female labour requirements evident since V-E Day, unfilled vacancies increased considerably during the month to total 30,004 at January 24.

This rise was due mainly to the increase in the demand for experienced textile workers and general factory hands. The number of unplaced female applicants, totalling 42,940 at January 24, was 24 per cent higher than the number reported at December 21; the Prairie Region accounted for more than one-third of this increase.

Clerical and Sales Workers

Applicants seeking clerical work rose by approximately 33 per cent during January but only a slight increase was evident in the demand for these workers. At January 24, there were 8,884 applicants available while unfilled vacancies at that time totalled only 3,854. Employment offices are experiencing considerable difficulty in securing suitable applicants for the jobs available; many of the applicants lack the qualifications which employers are now requesting. Many sales workers who had secured temporary employment during the Christmas season have re-entered the labour market and by January 24, the supply was approximately five times the number of vacancies reported.

Service Workers

With the easier labour market, the long under-staffed service industries have gradually been relieved. At January 24, there were 6,226 workers to fill the 8,208 vacancies listed; a surplus of service workers was evident in the Pacific Region but this was offset by a considerable shortage in Ontario. Available supply is approximately equal to the demand in all the service trades with the exception of domestic service. At January 24, the demand for domestic servants accounted for over 40 per cent of the female service workers required; applicants, however, are still reluctant to accept this type of work. The

institution of Home Aide courses in many of the larger centres has relieved this situation to some extent.

Skilled and Semi-skilled Workers

The downward trend in the demand for female skilled and semi-skilled workers apparent since the cessation of hostilities has

been reversed during the past two months. During January, demand increased by approximately one-quarter to total 9,377 at January 24. The number of female applicants registering as skilled or semi-skilled workers also increased and at January 24 totalled 8,188. At January 24, more than 70 per cent of the demand in this group was for experienced

textile workers but less than one-third of the applicants were seeking this type of employment. Sewing machine operators were particularly in short supply. In spite of the fact that local offices have persuaded many women released from war plants to enter the textile mills or one of the service groups, there remains a considerable surplus of metalworkers. Laundry workers were urgently needed throughout Canada but few qualified applicants were available.

Unskilled Workers

At January 24, approximately 30 per cent of the female applicants were unskilled. Although vacancies for this type of work increased during January, demand was little more than half the available supply. In Ontario, particularly, there was an excess supply, but this should be greatly relieved during the spring with the increase of industrial activity.

Regional Analysis

The Regional analysis which follows is based on semi-monthly reports received from Local Employment Offices across Canada. The report covers employment conditions during the month ended January 22, 1946.

Maritime Region

Woods Operations.—There are 1,500 woodsmen needed in the Maritimes, mostly for the New Brunswick pulpwood camps. However, experienced loggers can be easily placed in any part of Nova Scotia and New Brunswick, as well as a limited number of inexperienced men in some areas.

Contractors are taking advantage of favourable weather conditions for maximum production of pitwood (for export and local trade), pulpwood, long lumber and fuelwood. An unusually long yarding season has prolonged pulpwood cutting in the Minto area, and local farmers are meeting the demand for loggers. About 140 skilled woodworkers can still be placed in the Moncton section, and the demand in the Fredericton district continues.

The Liverpool office cannot find enough local applicants to meet orders for about 150 bushmen, and the Amherst office has placed orders for 70 woodworkers in first zone clearance.

Coal Mining.—Production is expected to increase gradually as ex-coal miners return from the armed forces. Reinstatements in the Sydney collieries have reduced vacancies for certificated miners to 350, and a further reduction is expected within the next several months as ex-miners continue to return.

Almost all regular miners of the Minto area now are working in the coal fields, and shaft production is as high as can be expected until more certificated men are available, or new applicants qualify for certificates. One hundred skilled men are still needed in the Chipman and Minto areas.

Manufacturing.—Lay-offs are still in progress in some Maritime factories. The Maritime Pant Manufacturing Company of Amherst laid off 140 employees temporarily, pending receipt

of cloth to complete an overseas order, and 30 men were released when the Fundy Bay Manufacturing Company closed for three months, for reconversion. The woollen mills at New Glasgow have changed hands, but the new owners will continue yarn manufacture.

There is little demand for unskilled labour in Halifax, but positions are open for trained workmen. The shipyards have sufficient repair orders on hand to keep their staff busy for some time to come but are having difficulty in finding enough skilled men to finish rush jobs. Shipbuilding at Liverpool is hampered by a shortage of steel workers; about 20 have been placed recently, but another 30 must be hired before other tradesmen can be placed.

The opening of the dehydration plant at Summerside has reduced female unemployment in that area, but the number of idle men is mounting steadily. Clearance orders for 60 girls needed in the Truro textile mills have been filled, but another 60 are required. Applicants are also being referred on the clearance orders of Windsor textile plants, but the requirements of the cotton mill at Milltown cannot be met until suitable housing accommodation is available.

Construction.—Adverse weather and shortage of building materials have slowed construction programs throughout the region, and some projects have been postponed until spring. There is a surplus of applicants in all but the bricklaying and plastering trades. Although more than 1,000 men are seeking employment as carpenters, highly skilled men can still be placed.

Ex-servicemen.—Many members of the armed forces are returning to their peacetime employment in the collieries and numerous reinstatements are being made in other industries. There are, however, still many ex-servicemen for whom no suitable jobs are open.

Quebec Region

Woods Operations.—Most of the men who left the bush for the holidays have returned, and many camps are filled to capacity.

Many experienced loggers have responded to the intensive publicity campaign for bushworkers, conducted throughout the province, but the inexperienced applicants are hard to place.

The demand for bushworkers is still heavy, especially in the Lake St. John and La Tuque areas. Operators in the Dolbeau area could absorb an additional 1,000 loggers, and Port Alfred and Roberval could each utilize another 350. At least 2,400 bushmen can still be placed in the La Tuque area, and there is also a large demand at Mont Laurier and Campbell's Bay.

Every effort is being made to recruit bushworkers through the Montreal office, which reports an increase of applicants to about 150 weekly. Few men are available to meet requirements in the Matane area, where operators are unwilling to engage many applicants on a day-to-day basis.

Mining.—Some Quebec operations are still seriously handicapped by the shortage of experienced miners. The working strength of the industry is being gradually increased, but lack of housing accommodation is still a serious handicap. One Rouyn company, which has bunkhouse facilities, has sent a recruiting representative to Montreal to canvass for miners.

Manufacturing.—The Christmas and New Year's slowdown affected both employment and production in all parts of the province, and disturbed labour conditions in the United States have also had a hampering effect. The American steel strike has reduced hiring in Montreal shipyards and car shops, and other employers of heavy labour are delaying until the dispute is settled.

A number of lay-offs occurred during the month. The Angus Shops of the C.P.R. laid off 100 labourers, because rolling stock which would normally be in the shops for repairs is being kept in use for troop transportation. The Quebec City arsenals have continued their staff reductions at a weekly rate of about 100 persons, of whom 75 are women. The Aluminum Company of Canada released 125 men from the Shawinigan Falls plant, but no further lay-offs are expected to follow. Staff reductions at the company's Arvida potrooms also are completed and 135 men have been hired for one potroom which is about to resume operations.

During the last few weeks several new projects have gone into production, while other established firms have completed their reconversion activities. As soon as materials and labour are available, there will be still greater activity in the province's primary

textile plants, clothing factories, and kindred industries.

Construction.—The customary seasonal lull, together with a serious shortage of building supplies, has created a surplus of construction labour of all types, except bricklayers and plasterers. Less urgent projects for which building permits have been issued are being postponed until the shortage of these skilled tradesmen and of materials can be overcome.

Work on the Chicoutimi-Laterriere-Quebec highway was resumed after the holidays and 200 workmen are back on the job.

Ex-Servicemen.—The number of unemployed is mounting, while the rate of placements remains stationary. However, about 200 special orders for ex-servicemen were listed during the first two weeks of the special campaign conducted by the Montreal Employers' Council. Most of these openings do not call for any particular skill. Some training-on-the-job opportunities for discharges have also been found.

Ontario Region

Woods Operations.—Mild weather and lack of snow prolonged the cutting, but hauling has recently begun. Another 2,700 bush workers are needed to finish the season satisfactorily. Operators have agreed to hire about 2,000 unskilled men, but the other 700 must be trained woodsmen of various types. An intensive advertising campaign is under way and payment of transportation from all Ontario points should stimulate recruiting.

The heaviest demand for bush labour comes from the Cochrane and Kapuskasing areas, where more than 800 men, skilled and unskilled, can be absorbed by the big companies, in addition to the demand of many other local contractors for more haulers. Cutters are less urgently needed at Timmins than earlier in the season, but teamsters and loaders are in great demand. The leading pulp producers in the district still call for more than 1,500 bushmen of all types.

Pulpwood operators are trying to find as many year-round cutters as possible, to meet the constantly increasing demand for raw pulp and for newsprint. The building of several large pulp and paper mills in Ontario during the coming year will add to this rising demand.

Hard Rock Mining.—Dearth of development during the war years is still affecting the mining field. Lack of materials and uncertainty as to the number of men to return from the armed forces have also hampered production, and no immediate increase is foreseen.

Experienced rock drillers are needed for the gold mines at Kirkland Lake, but there are no vacancies for beginners. No inexperienced

men are being hired in the Timmins area, and skilled applicants more than meet current requirements. Several hundred miners of the district are still to be discharged from the armed forces.

Neither surface nor underground labour is required for the nickel operations at Sudbury, where the Falconbridge Nickel Company is laying off about 200 employees.

Manufacturing—The employment picture varies greatly in different industrial centres. Plant expansion is proceeding rapidly in some cities, while in others, reconversion plans are seriously hampered by the current shortage of materials. The steel strike in the United States has been a further setback to production. To offset the loss of American steel, the Dominion Government has urged an intensive effort to increase output in Canadian plants.

Some mass lay-offs occurred during the last month. Although all employees affected by the dispute between the Ford Motor Company and Local 200 U.A.W.-C.I.O. of Windsor were recalled in late December, several hundred of these workers have since been laid off temporarily. Many others have been released for an indefinite time by Chrysler Corporation of Canada, Gar Wood Industries, and the Long Manufacturing Company, also of Windsor. Meantime, about 225 of the 500 employees released by Gotfredson's Company a few months ago have been reinstated.

The almost complete shutdown of the General Motors factory in Oshawa has created a serious unemployment situation in that area.

Although the output of cast-iron soil pipe is increasing materially, the Ontario foundries are all well staffed except in the Galt area, where there is still a shortage of labour. The demand for moulders is declining throughout the region, but the call for this type of workers still comprises 30 per cent of the total orders for metal working tradesmen. A campaign is under way to fill outstanding clearance orders for about 150 moulders, of whom 40 are needed by one Brantford company.

The textile industry in general has increased its labour demands at a rate which reflects the rapidity of reconversion. A slight upswing in placements has been accompanied by a rise in labour turnover, and the demand for women and girls is still strong. Textile plants in London, Toronto, Brampton, Goderich, Perth, and St. Thomas have many vacancies. One rubber company in Kitchener has recruited girls from the North Bay and Sudbury areas, and will hire more as soon as housing accommodation can be arranged. Another Kitchener firm is still calling for 100 female workers.

Construction—Weather conditions throughout the region—and favourable in western Ontario—have been favourable but the short-

age of materials is still delaying many projects. A few plasterers and tile-setters, as well as experienced plumbers, are still needed, but the most urgent call is for bricklayers. Progress on the Sunnybrook Hospital has been held up by the need for at least 20 of these tradesmen, and other building projects in the Toronto area require an additional 50. The demand is also heavy at Hamilton, St. Catharines, Marathon, and Kapuskasing. A special appeal made to all local unions throughout the province, and as far west as Winnipeg, has met with no response. Experienced trim carpenters are also in very short supply.

Ex-Servicemen—Discharges from the armed forces—especially from the Army—are again mounting, but to date the region is absorbing 50 per cent of the initial discharges. In the Greater Toronto area, there were more than 6,600 veterans of both World Wars unplaced at January 19, an increase of 500 over the week previous.

While employers are ready and willing to employ as many ex-servicemen as they can place, production is held up by lack of materials and by industrial disputes in the United States.

Prairie Region

Woods Operations—Hauling operations will soon be in full swing in northwestern Ontario, and there has been a marked increase in the demand for teamsters, loaders, and other hauling labour, as well as for cutters. About 480 pulp cutters are needed in the Port Arthur area, and more will be required as new camps open. While pulp hauling operations are fairly well manned, licensed scalers, blacksmiths, and cooks are still hard to find. The number of men entering the woods has increased in the last two weeks, and the offer of transportation expenses to suitable applicants should be a further attraction.

Small operators in the Fort Frances area are still calling for piece-makers, and unfilled orders of larger operators remain at the 400 level. Recently there has been a strong demand for dam builders, truck helpers, saw filers, tractor drivers, and blacksmiths.

While there has been little change in labour demand in Manitoba, many more bushmen are being placed. Saskatchewan offices report that logging labour requirements are light, except for a heavy demand in the Prince Albert area. Some progress has been made in reducing the number of vacancies in Alberta, where there was a drop of almost 500 orders between January 4 and January 17. Applicants in the Calgary area are being sent to the Pacific Coast on clearance orders. Orders on file in the Red Deer area have increased and operators are willing to take inexperienced men fit for heavy

outside work. The shortage persists at Edmonton, the few transfers-in falling far short of the demand.

Coal Mining—Certificated miners are still needed for most of the Prairie collieries, and until such skilled labour is found very few unskilled workers can be hired. Former coal miners from the armed forces are returning to Drumheller and other mining districts, relieving the shortage, but housing accommodation for men from outside points is still a major problem.

Hard Rock Mining—The seasonal lull in mining activity has lessened labour requirements of most operators, but skilled miners are still needed. The Port Arthur Office reports a shortage of experienced machine operators in the Geraldton area, and a demand for miners, muckers and bushmen from the Patricia district. In spite of continued prospecting activity in the Red Lake area, only experienced underground workers are needed at Kenora.

Manufacturing—There are few orders for general industrial labour and some lay-offs are still in progress. The termination of the seasonal rush in the packing plants has resulted in the release of many workers in Winnipeg, Regina, Edmonton, Calgary, and other western centres. Members of the armed forces on industrial leave, who were included in the lay-offs, have returned to their military districts. The sugar factories are also concluding their seasonal operations and releasing staff.

The Port Arthur Shipbuilding Company is still releasing small groups of employees from time to time, and its present labour needs are limited to a few skilled tradesmen. The United States steel strike is slowing production in the Port Arthur shipyard and the car shops at Fort William.

Construction—While unfavourable weather and shortage of materials have caused a drop in employment throughout the industry, there are still more men working on building projects in the region than in any winter before the war. Lay-offs of building tradesmen in Winnipeg are more frequent, but an occasional skilled worker is needed. At Lethbridge, too, skilled finishing carpenters and other qualified tradesmen are in demand. At Red Deer, however, workmen are being released, and the Calgary office has still about 200 men registered for employment.

The Regina office has orders on hand for 300 grain elevator construction and repair men, to be filled at the beginning of April.

Ex-Servicemen—Many ex-service personnel are being placed in skilled and semi-skilled

types of work, and some in labouring jobs, which are less popular owing to the temporary nature of the work. Reinstatements continue at a satisfactory rate, and many ex-servicemen who have not yet been taken back by their former employers will return when operations are resumed in the spring.

Pacific Region

Wood Operations—In spite of bad weather, activity has increased gradually since the end of the holiday season. Because of the deep snow, many camps on the Pacific Coast will not resume operations until the end of January, while some of the larger companies will not be in full production until the beginning of March. Few of the men applying for woodwork in Vancouver have sufficient experience for responsible positions, but many semi-skilled applicants are being referred to the logging camps. The Victoria office has very few orders for bush labour but applicants are mounting steadily.

Heavy snows are also hampering operations in many parts of the interior, and one pit-prop operator at Greenwood was forced to lay off 30 Japanese workers on this account. Local applicants are filling all orders for general labour in the Prince George area (also affected by snow conditions) but it is still difficult to find such skilled woodsmen as fallers and buckers.

Sawmills—Many of the mills which closed for the holidays and the seasonal overhaul are resuming operations. The increased supply of logs is speeding production. The 80 men laid off by the Mohawk Lumber Company of New Westminster early in December have returned to work. The biggest sawmill in the district has taken on numerous extra workers, and will increase its staff still further as soon as the existing shortage of construction millwrights and boommen has been overcome. Another operator has placed an order for 25 extra labourers.

The Victoria office has many applicants, but only skilled mill workers are needed. One large local company has resumed operations and most of its former employees have returned. Sawmills in the Duncan area, unaffected by bad weather, are all fully staffed, and all portable mills in the Prince George section are in full production.

Coal Mining—Certificated coal miners are still urgently needed in all but the Telkwa field, where one large collinery remains closed and others are well-manned. A few miners are coming into the province from outside points, and the over-all employment picture is improving.

Crow's Nest Pass collieries are calling for skilled men, but are fairly well supplied with underground labour. The Nanaimo office is finding it difficult to fill an order for 70 certificated men.

Hard Rock Mining.—The manpower situation in the base metal mines is improving steadily as development work permits an increase in production. The chief need of the gold mines is for experienced miners and timbermen, but present requirements are limited by the delay in development operations on most of the larger properties.

The Vancouver office has orders for experienced timbermen and underground trackmen, whose engagement will lead to the employment of many unskilled labourers. One mining company at Wells needs many more experienced miners and muckers before full production is possible.

Manufacturing.—There are few vacancies in the larger industrial centres; most of the openings listed are at outside points. The number of unrefereed applicants is mounting and vacancies are quickly filled. Fruit and vegetable processing plants are quiet and the salmon canneries and fish processing factories are just beginning their busy season.

The Vancouver and Victoria shipyards are quiet. Many men formerly engaged in ship-building are idle, and there are no vacancies at present for applicants with these wartime skills. Employment in the foundries remains at the usual level, and any vacancies occurring are easily filled.

Construction.—Building is retarded by adverse weather and the shortage of materials, but there is prospect of employment for many men when the industry is again active. In some sections the lack of housing accommodation is a major problem.

The Vancouver office is having difficulty in meeting demands for skilled workmen of all types, but has a surplus of semi-skilled workers and labourers. In Victoria there are few openings for the many carpenters and labourers seeking jobs.

Ex-Servicemen.—New applications for employment dropped from 8,550 to 6,970 during December, and there were 3,780 placements, as compared with 4,850 in the previous month. Except in Vancouver, Victoria and New Westminster, the employment picture is satisfactory for this season of year.

Applications for Employment; Vacancies and Placements, December, 1945

THE volume of business transacted by the National Employment Service Offices of the Unemployment Insurance Commission during the four weeks November 30 to December 27, 1945, showed losses in the average daily placements of 35 per cent and 34 per cent respectively when compared with the previous period November 2 to November 29, 1945, and with the four weeks December 1 to December 28, 1944. In comparison with the four weeks in November, all industrial groups recorded declines the most noteworthy being in manufacturing, forestry and logging, construction, trade and services. When compared with the four weeks in December, 1944, small gains were noted in construction, mining and agriculture and a negligible increase in fishing, hunting and trapping but all other industrial divisions registered losses, the greatest being in manufacturing, forestry and logging, services and trade.

The accompanying chart shows the trend of employment since January, 1942, as represented by the ratios of vacancies notified and of placements effected for each one hundred applications for work registered at

Employment Offices throughout Canada. It will be seen from the graph that the trends of the curves of both vacancies and placements in relation to applications followed downward courses, the ratio of vacancies to each one hundred applications being 66.4 during the four weeks November 30 to December 27, 1945, in contrast with 68.4 in the preceding four weeks and 95.4 during the four weeks ending December 28, 1944. The ratio of placements to each one hundred applications during the period under review was 42.4 compared with 46.8 for the previous four weeks and 68.1 during the four-week period in December, a year ago.

The average number of vacancies reported daily by employers to the offices throughout Canada during the four weeks November 30 to December 27, 1945, was 4,795, compared with 6,897 during the preceding four weeks and 6,506 during the four weeks ending December 28, 1944. The average number of applications for employment received daily by the offices during the four weeks in December, 1945, was 7,220, in comparison with 10,083 during the previous four weeks ending

November 29, and 6,823 in the corresponding period a year ago. The average number of placements made daily by the offices from November 30 to December 27, was 3,067, of which 2,901 were in regular employment and 166 in work of one week's duration or less, compared with a total daily average of 4,725 during the preceding four weeks. Placements during the four weeks December 1 to December 28, 1944, averaged 4,649 daily, consisting of 4,489 in regular and 160 in casual employment.

placements effected, while during the four weeks December 1 to December 28, 1944, there were recorded 149,643 vacancies, 156,930 applications for work and 106,916 placements in regular and casual employment.

During the year 1945, the offices throughout Canada reported 2,421,248 vacancies, 2,516,984 applications and 1,493,581 placements in regular and casual employment, a reduction in placements of 14.2 per cent compared with the year 1944.

During the four weeks ending December 27, 1945, the offices referred 87,368 persons to vacancies and effected a total of 70,547 placements; of these the placements in regular employment were 66,730, of which 54,411 were of males and 12,319 of females, while placements in casual work totalled 3,817. The number of vacancies reported by employers was 80,566 for males and 29,709 for females, a total of 110,275, while applications for work numbered 166,070, of which 135,928 were from males and 30,142 from females. Reports for the four-week period November 2 to November 29, 1945, showed 165,536 vacancies notified, 241,984 applications made and 113,390

The following table gives the placements effected by the offices, each year, from January, 1935, to date:—

YEAR	PLACEMENTS		
	Regular	Casual	Totals
1935.....	226,345	127,457	353,802
1936.....	217,931	113,519	331,450
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295
1939.....	242,962	141,920	384,882
1940.....	320,090	155,016	475,106
1941.....	316,168	191,595	507,763
1942.....	809,983	85,638	895,621
1943.....	1,890,408	53,618	1,944,026
1944.....	1,693,119	46,798	1,739,917
1945.....	1,445,692	47,889	1,493,581

Nova Scotia and Prince Edward Island

Opportunities for employment as reported by National Employment Service Offices in Nova Scotia and Prince Edward Island during the four weeks terminating December 27, 1945, numbered 214 daily compared with 267 in the previous period and 241 during the four weeks terminating December 28 a year ago. Placements registered a daily average of 139, in contrast with 192 in the preceding period and 179 during the four weeks December 1 to December 28, 1944. Moderate decreases in manufacturing, public utilities operation, trade, and forestry and logging were the only changes of importance in placement, from the corresponding period a year ago. Placements by industrial groups numbered: manufacturing 844; services 760; trade 524; construction 435; public utilities operation 317; forestry and logging 162, and mining 109. There were 2,297 men and 733 women placed in regular employment.

New Brunswick

The demand for workers on a daily average as indicated by orders listed at Employment Offices in New Brunswick during the period under review, was 166 compared with 242 in the preceding four weeks and 349 during the period ending December 28, 1944. There was a daily average of 106 placements in comparison with 148 during the four weeks ending November 29, and 149 in the corresponding period of 1944. When comparing placements by industrial divisions with the four weeks terminating December 28 a year ago, there were moderate declines in forestry and logging, trade, manufacturing, services, and a gain in public utilities operation. Placements by industries included: manufacturing 523; public utilities operation 481; services 471; trade 403; construction 268, and forestry and logging 187. Regular placements numbered 1,946 of men and 410 of women.

Quebec

Positions offered through Employment Offices in the Province of Quebec during the four weeks ending December 27, 1945, averaged 1,252 daily in comparison with 1,787 in the preceding period and 2,044 during the four weeks terminating December 28 a year ago. The average number of placements affected daily was 510 in contrast with 896 in the previous period and 1,412 during the four weeks December 1 to December 28, 1944. With the exception of a moderate increase in mining and a small gain in construction, placements were less numerous in all industrial groups than during the corresponding period ending December 28 a year ago. The most

marked reductions being reported in forestry and logging, and manufacturing, followed by substantial losses in services, public utilities operation and trade. Industrial divisions in which the majority of placements were effected were: manufacturing 3,897; construction 2,154; services 1,696; forestry and logging 1,410; trade 1,067; mining 711, and public utilities operation 654. Placements in regular employment numbered 9,595 of men and 1,914 of women.

Ontario

There was a decrease in the average number of positions available daily at Employment Offices in Ontario during the period terminating December 27, there being 1,915 compared with 2,900 in the four weeks November 2 to November 29, and 2,500 during the corresponding period of 1944. Placements, likewise, decreased under both comparisons, the daily average being 1,353 during the four weeks under review, in comparison with 2,107 in the previous period and 1,808 during the four weeks ending December 28 a year ago. A heavy reduction in manufacturing augmented by substantial declines in trade, forestry and logging, services, and a loss much smaller in volume in public utilities operation accounted for the decrease in placements from the period ending December 28, 1944. Of the remaining groups, a substantial improvement was noted in construction. Industries in which employment was secured for more than 500 workers included: manufacturing 11,263; services 5,920; trade 4,010; construction 3,513; forestry and logging 2,579; public utilities operation 2,304; mining 853, and finance and insurance 533. There were 24,936 men and 5,167 women placed in regular employment.

Manitoba

Orders listed at Employment Offices in Manitoba during the four weeks under review, called for a daily average of 233 workers, compared with 360 in the preceding period and 301 during the four weeks ending December 28 a year ago. Placements showed a daily average of 186 in contrast with 282 in the previous period and 219 during the four weeks terminating December 28, 1944. When comparing placements by industrial divisions with the period December 1 to December 28 a year ago, the most significant changes were moderate losses in manufacturing, services, trade and public utilities operation and a gain in construction. Placements by industries included: services 1,123; trade 1,097; manufacturing 834; construction 482, and public utilities operation 364. Regular placements numbered 2,327 of men and 1,157 of women.

Saskatchewan

Employment opportunities as indicated by orders received at Offices in Saskatchewan during the period November 30 to December 27, showed a daily average of 132 workers, in comparison with 195 in the preceding four weeks and 154 during the period ending December 28, 1944. The average number of placements recorded daily was 98, in contrast with 150 during the previous four weeks and 119 in the period ending December 28 a year ago. Except for small increases in construction and agriculture, all industrial groups recorded decreases in placements from the corresponding four weeks of 1944, the greatest reductions being in forestry and logging, services and trade. Placements by industrial divisions included: services 758; trade 470; manufacturing 413; public utilities operation 230; construction 127, and forestry and logging 102. There were 1,443 men and 442 women placed in regular employment.

Alberta

Orders received at Employment Offices in Alberta during the four weeks under review, called for an average of 293 workers daily compared with 356 in the period terminating November 29, and 324 during the corresponding four weeks of the previous year. There was a daily average of 219 placements in comparison with 308 in the preceding period and 253 during the four weeks ending December 28 a year ago. Reductions in placements from the period terminating December 28,

1944, took place in trade, services, and public utilities operation, and increases in forestry and logging, and agriculture all of which were moderate in volume. Placements by industries numbered: services 1,281; manufacturing 888; forestry and logging 686; trade 640; public utilities operation 475; construction 471; mining 331, and agriculture 200. There were 3,778 men and 798 women placed in regular employment.

British Columbia

During the period terminating December 27, 1945, the daily average of positions offered through Employment Offices in British Columbia was 589, compared with 790 in the previous four weeks and 594 during the period terminating December 28 a year ago. Placements showed a lower average during the four weeks under review, being 458 daily in contrast with 642 in the preceding period and 510 during the four weeks December 1 to December 28, 1944. Placements in manufacturing were considerably fewer than during the corresponding period a year ago, and smaller losses were reported in trade, services and public utilities operation. These declines were partly offset by improvement in all other industries, the highest of which was in construction. Industrial divisions in which most of the placements were effected were: services 2,513; manufacturing 2,199; trade 1,591; construction 1,528; forestry and logging 1,096; public utilities operation 976, and mining 376. Placements in regular employment numbered 8,089 of men and 1,698 of women.

*Quarterly Report of National Employment Service Offices,
September 28 to December 27, 1945*

EMPLOYMENT conditions as indicated by the work of National Employment Service Offices of Canada during the quarter September 28 to December 27, 1945, was considerably less in volume than in the corresponding quarter of 1944, there being reductions of 18 per cent in vacancies offered and 25.3 per cent in placements effected. Heavy losses in vacancies were recorded in manufacturing, trade, services, forestry and logging, and public utilities but appreciable gains in construction and mining. Placements in construction and mining were higher but greatly offset by losses in manufacturing, trade, forestry and logging and public utilities. All provinces except Prince Edward Island reported fewer vacancies and all recorded reductions in placements the most noteworthy declines in both vacancies and placements being in Quebec and Ontario.

The accompanying table gives the vacancies and placements of the National Employment Offices by industrial groups in the various provinces during the period September 28 to December 27, 1945.

From the chart appearing elsewhere in this issue, which accompanies the article on the work of the National Employment Service Offices during December, 1945, it will be noted that the curves of vacancies and placements in relation to applications took downward courses during the thirteen weeks.

During the period September 28 to December 27, 1945, there was a ratio of 74.3 vacancies and 47.9 placements for each

one hundred applications for employment, as compared with 97.6 vacancies and 69.1 during the same quarter of 1944.

The average number of positions offered daily during the quarter under review was 6,754, of applications registered 9,091, and of placements effected 4,357, in contrast with a daily average of 8,238 vacancies, 8,436 applications and 5,832 placements in regular and casual employment during the fourth quarter of 1944.

During the thirteen weeks September 28 to December 27, the offices reported they had referred 439,178 persons to positions and had effected a total of 331,134 placements, of which 317,819 were in regular and 13,315 in casual work. Of the placements in regular employment, 263,006 were of males and 54,813 of females, while casual work was found for 4,824 males and 8,491 females. A comparison with the corresponding period in 1944 showed that 443,214 placements were then effected of which 431,787 were in regular and 11,427 in casual work. Applications for employment during the period under review were received from 553,280 males and 137,651 females, a total of 690,931 in contrast with the registration of 641,159 persons during the same quarter of 1944. Employers notified the offices of 513,316 positions, of which 389,666 were for males and 123,650 for females, as compared with 626,124 opportunities for employment offered during the last quarter of 1944.

Unemployment in Trade Unions at the Close of the Quarter Ending December 31, 1945

UNEMPLOYMENT among trade union members in Canada stood at 3.0 per cent at the end of the December quarter, more than twice the 1.4 per cent for September 30, 1945. This is the highest percentage shown since April, 1942, when it stood at 3.3.

In the following report unemployment refers only to involuntary idleness due to economic causes. Persons who are without work because of illness, a strike or a lockout,

or who are engaged in work outside their own trades are not considered as unemployed. As returns from unions reporting vary from quarter to quarter with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that the figures refer only to the organizations reporting.

For the close of the quarter under review, returns from 2,460 local branches of unions

were tabulated. These reported 410,089 members of whom 12,116 (3.0 per cent) were unemployed. At the end of September, 1945, 2,307 local branches reported 377,495 members, including 5,398 (1.4 per cent) without work. For the corresponding month in the previous year the percentage of unemployment was 0.6. In December, 1939, it was 11.4.

The increase in the percentage of trade union unemployment at the end of December was due mainly to conditions reported by unions in the manufacture of iron products, mineral and wood products, mining, transportation, and in certain trades in building

and construction. As compared with the previous quarter slight improvements were recorded among those engaged in the manufacture of animal products, clay, glass and stone products, and men's and women's garments.

The percentages of unemployment, at certain dates, in each province are shown in Table I. Only Quebec showed an improvement at the end of December in comparison with the previous quarter; the percentage dropped from 2.4 to 1.8. New Brunswick, Ontario, and Nova Scotia showed the most marked upswings in trade union unemploy-

ment, percentages advancing respectively to 4.7, 4.0 and 4.6 from 0.5 for New Brunswick and Ontario, and 2.0 for Nova Scotia. Trade union unemployment in Manitoba and Saskatchewan increased from 0.4 per cent in each case to 1.2 and 1.3 per cent respectively. The percentage rose from 0.3 to 0.9 in Alberta and from 2.4 to 3.5 in British Columbia. Substantially lower employment levels were indicated in nearly all the provinces at the end of 1945 as compared with December, 1944.

A separate compilation is made each quarter of unemployment among trade union members in the largest city in each province, with the exception of Prince Edward Island. For the quarter under review, recessions in employment were recorded in all the principal cities. The percentages ranged from 0.5 per cent in Edmonton to 16.7 in Saint John where one union of boiler-makers and shipbuilders reported 327 to 450 members as unemployed. When compared with the previous quarter the percentage for Halifax rose from nil to 2.0; Montreal from 0.7 to 1.7; Toronto from 0.3 to 1.0; Winnipeg from 0.5 to 1.5; Regina from 0.1 to 1.1; and Vancouver from 2.2 per cent to 3.8.

A comparison with December, 1944 shows improvement only in Edmonton. In all the other cities increases in union unemployment were recorded. The most pronounced changes were in Montreal from 0.5 per cent to 1.7 and in Vancouver from 0.6 per cent to 3.8.

Returns were tabulated from 912 local union organizations in the manufacturing industries. These reported a combined membership of 192,352 of whom 7,555 (3.9 per cent) were recorded as unemployed. At the end of the previous quarter 4,286 (2.5 per cent) of 174,633 members reported by 823 locals were without work. In December, 1944, 0.4 per cent of 213,361 members reported by 847 unions were unemployed. Among union members engaged in the manufacture of electric current, textile products, men's and women's garments, and non-ferrous metal products, the employment situation was more favourable than at the end of September. Slight increases in unemployment were indicated by all the other groups of manufacturing industries. As compared with September, 1944, a decrease in unemployment was indicated only among those engaged in miscellaneous manufacturing and in the production of electric current. A substantial increase in the percentage of unemployment was recorded in iron and its products, non-ferrous metals and in wood products industries.

In the transportation industries, returns were received from 911 local unions with a combined membership of 98,933 of whom 1,347 (1.4 per cent) were without work on the reporting date. In comparison 0.4 per cent were unemployed at the end of the previous quarter and 0.5 per cent at the end of December, 1944. Unemployment among union workers in shipping increased to 2.8 per cent from 1.5 at the end of September and 2.7 in December of the previous year. The unemployment percentage of 0.2 recorded in local transportation was unchanged from the previous quarter but was a slight increase from the 0.1 at the end of December, 1944. The unemployment percentage in steam railway operations increased to 1.6 from 0.3 at the end of September, and 0.5 in the corresponding month in 1944.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Unemployment in the mining group rose from 0.4 to 4.0 per cent. At the end of December, 1944, the percentage of unemployment registered was 0.5. For the quarter under review 76 unions in mining reported a total of 31,518 members of whom 1,263 were unemployed at the reporting date. Unemployment in coal mining was recorded as 0.2 per cent; this is an increase from 0.1 in September and full employment in December, 1944. Trade union unemployment among metallic miners jumped from nil at the end of September to 10.0 per cent. Unions of non-metallic miners, other than coal miners, reported 5.0 per cent of 3,840 members unemployed; for the previous quarter this group reported an unemployment percentage of 2.8, and 4.9 for December, 1944.

The Department received reports from 202 locals in the building and construction trades. These reported a combined membership of 32,587 of whom 3.5 per cent were unemployed. In comparison 1.5 per cent were unemployed at the end of September and 2.8 at December in 1944. Marked seasonal recessions in employment were indicated among bricklayers, masons and plasterers, carpenters and joiners, and painters, decorators and paperhangers. Unemployment among bricklayers increased from 0.4 to 2.7 per cent, carpenters from 0.6 to 3.6, and painters from 0.1 to 5.0. An improvement was indicated as compared with the previous quarter for electrical workers and for plumbers and steamfitters. Recessions in

employment were indicated for other groups in this category.

Unemployment among trade union members in public and personal services increased to 0.8 per cent from 0.4 reported at the end of September, 1945, and December, 1944. Employment in the retail trades remained unchanged from the previous quarter, 0.3 per cent unemployment being again recorded.

The communications group showed an increase in unemployment from 0.1 to 3.2 per cent of 9,362 members. At the same date in the previous year, 0.5 per cent were unemployed.

Full employment was again reported in lumbering and logging. The same situation prevailed in September, 1945, and December, 1944. Although 25.1 per cent were reported as unemployed in the fishing group, this figure cannot be considered representative of general conditions in the industry as it is based on returns from only four unions with a total of 795 members.

The accompanying chart illustrates the trend of unemployment from January, 1939, to date. Table I shows by provinces the average percentage of union members who were unemployed each year from 1933 to 1945 inclusive. It also indicates the percentage of those without work for December of each year since 1932, and for each quarter of 1943, 1944, and 1945. Table II indicates the percentage of unemployment in the various groups of industries at certain dates since 1932.

Unemployment in Canada as Reported by Trade Unions for the Year 1945

AVERAGE unemployment in trade unions during 1945 was 1.4 per cent. This figure is an increase from 0.5 in 1944 and is the highest since the 2.2 per cent registered in 1942.

The yearly average was obtained from quarterly reports received by the Department of Labour from local trade union branches throughout the country. These reports show the number of members in good standing (those retired or in the armed forces are excluded) and the number of these members unemployed at the end of each quarter. A person is recorded as unemployed only when he is idle because of economic causes. The situation at the end of each quarter is summarized in the LABOUR GAZETTE, the preceding article being a review of the quarter ending December 31, 1945.

During 1945, quarterly reports were received from an average of 2,336 locals with an average combined membership of 405,878. In 1944, the average number of quarterly reports received was 2,308 with a combined membership of 424,713 of whom 0.5 per cent were unemployed. Union membership tends to increase during periods of high employment and to decline in periods of high unemployment.

The highest percentage of unemployment during 1945 was recorded in December. The percentage then was 3.0 in comparison with 1.4 at the end of September, and 0.5 per cent at the end of June. The increase may be ascribed to the termination of war contracts, reconversion, and the difficulty of obtaining materials in the building and construction industry.

The quarterly reports from trade unions in 1945 indicate that in manufacturing the average percentage of unemployment was 1.7. This is an increase from 0.2 per cent for 1944, and from 0.4 per cent for 1943; the average for 1939 was 12.0 per cent. A considerable increase in this group was noted in the third quarter when the percentage rose to 2.5 from 0.7 in the second quarter and 0.4 in the first; at the end of the year this percentage stood at 3.9. The same trend was noted in the iron and steel group where the percentage increased gradually from 0.2 in the first quarter to 8.3 at the end of December.

Employment in the printing and publishing trades was generally high throughout 1945, a slight recession being recorded only in the last quarter. Fluctuations in unemployment were recorded among workers in pulp and paper mills and animal products, but at the end of the year both indicated slightly higher unemployment than at the end of 1944. The non-ferrous metals group registered a higher percentage of unemployment during 1945 than in 1944. This may be due to reduced production in the aluminum industry.

In 1945 employment among woodworkers was generally more favourable than in the corresponding quarters of 1944, except at December, 1945, when the percentage was 3.8 as compared with 0.4 at the end of the preceding year. In the textile group employment conditions were favourable, the percentage of unemployed decreasing from 0.9 in March to 0.1 in December; this is, however, slightly higher than the almost full

employment noted at the end of the previous two years. The quarterly percentages are indicated in Table II in the preceding article on page 241 in this issue.

The level of unemployment among coal miners was low throughout the year, ranging from 0.3 per cent in the first quarter to full employment in the second; the yearly average was 0.1 per cent. The average in logging increased to 1.5 per cent from 0.2 for 1944. However, the rise was due entirely to the 400 reported unemployed in the first quarter. Full employment was noted for the rest of the year.

In the building and construction trades the average percentage of unemployment for the year declined to 1.9. This compares favourably with 2.3 per cent for 1944. The percentages in this group ranged from a low of 0.3 in June to a high of 3.5 in December. The corresponding figures in the previous year, were 0.9 in June and 2.8 in December.

In 1945 employment conditions for union members in the transportation industries declined to 0.7 per cent. In 1944 the corresponding average was 0.4, and in 1939 was 8.3. In 1944 the range was from 0.3 to 0.5 per cent, but in 1945 the low was 0.3 and the high, 1.4.

A slight improvement was again noted for communication employees. The average percentage of unemployment in this group was 1.2 in 1945, and 1.3 in 1944. A substantial increase in unemployment was indicated, however, at the end of the year.

Among the provinces, Alberta remained unchanged; the other provinces (Table I, page 240) experienced slight recessions in employment conditions.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED
BY TRADE UNIONS

Strikes and Lockouts in Canada During January, 1946

During January, 1946, strike activity in Canada declined sharply as compared with the previous month. Preliminary figures show 12 strikes in existence during January, 1946, involving 2,935 workers, with a time loss of 20,593 man-working days, as compared with 13 strikes in December, 1945, with 19,619 workers involved and a time loss of 261,619 days. In January, 1945, there were 16 strikes, involving 5,435 workers, with a time loss of 32,142 days.

Based on the number of non-agricultural wage and salary workers in Canada, the above figures show an estimated time loss of 0.28 days for January, 1946, for every 1,000 days of available working time, as compared with 3.61 for December, 1945, and 0.42 for January, 1945.

Of the 12 strikes recorded for January, 1946, two were settled in favour of the employers, two in favour of the workers,

STRIKES AND LOCKOUTS IN CANADA, JANUARY, 1946, JANUARY-DECEMBER, 1945

Date	Number of Strikes and Lockouts		Number of Workers Involved		Time Loss	
	Com-mencing During Month	In Existence	Com-mencing During Month	In Existence	In Man-Working Days	Per 1,000 Available Work Days
January, 1946*.....	12†	12	2,935†	2,935	20,593	0.28
December, 1945*.....	7	13	2,654	19,619	261,619	3.61
January, 1945*.....	16†	16	5,435†	5,435	32,142	0.42

* Preliminary figures. † Strikes un-terminated at the end of the previous year are included in these totals.

The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1946*

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars†
	Establish- ments	Workers		
Strikes and Lockouts in Progress Prior to January, 1946				
MANUFACTURING— <i>Vegetable Foods—</i> Bakery workers and driv- ers, Toronto, Ont.	1	500	6,000	Commenced November 25; for a union agree- ment providing for union shop, check-off ¹ etc.; terminated January 16; negotiations; compromise, check-off clause agreed to.
<i>Printing and Publishing—</i> Compositors, etc., Winnipeg, Man.	2	120	3,120	Commenced November 8; for a new agree- ment providing for increased wages and other conditions; un-terminated.
<i>Miscellaneous Wood Pro- ducts—</i> Shingle mill workers, New Westminster, B.C.	1	60	1,000	Commenced November 28; for a union agree- ment providing for increased wages, etc.; terminated January 22; negotiations; in favour of workers.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1946*—*Continued*

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars†
	Establish- ments	Workers		
Strikes and Lockouts in Progress During January, 1946				
MINING— Coal miners, Rothwell, N.B.	1	64	64	Commenced January 11; refusal of a blacksmith to join union; terminated January 11; negotiations; in favour of workers, blacksmith joined union.
Asbestos miners, Asbestos, P.Q.	1	150	75	Commenced January 14; protesting promotion of a certain worker to job of foreman; terminated January 14; negotiations and return of workers pending investigation; indefinite.
Coal miners, Nordegg, Alta.	1	369	738	Commenced January 25; protesting quality of meals served in company boarding house; terminated January 26; return of workers pending investigation; indefinite.
MANUFACTURING— <i>Vegetable Foods—</i> Flour mill workers, Seaforth, Ont.	1	35	300	Commenced January 22; for increased wages following reduction in hours from 10 to 8 per day; untermiated.
<i>Rubber and Its Products—</i> Rubber factory workers, St. Jerome, P.Q.	1	1,425	8,900	Commenced January 23; for increased wages for four workers; terminated January 29; conciliation, federal, and reference to arbitration; indefinite.
<i>Metal Products—</i> Steel mill workers, Sydney, N.S.	1	140††	150	Commenced January 10; protest against disciplining a worker; terminated January 11; return of workers; in favour of employer.
<i>Non-Metallic Minerals, Chemicals, etc.—</i> Concrete pipe factory workers, Chatham, Ont.	1	18	18	Commenced January 12; for increased wages and protesting appointment of a foreman who could not speak English, etc.; terminated January 12; negotiations; compromise, foreman replaced.
CONSTRUCTION— <i>Buildings and Structures—</i> Carpenters, Cornwall, Ont.	1	40**	200	Commenced January 19; for heat in building during extreme cold; terminated January 24; return of workers; in favour of employer.
TRADE— Milk drivers and processors, Weston, Ont.	1	14	28	Commenced January 15; alleged delay in negotiating a new agreement; terminated January 16; conciliation, provincial, and return of workers pending further negotiations; indefinite.

*Preliminary data based where possible on direct reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

† In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

†† 300 indirectly affected. ** 30 indirectly affected.

two were compromise settlements and four were indefinite in result, work being resumed pending final settlement. At the end of the month, therefore, two strikes were recorded as untermiated, namely: compositors at Winnipeg, Man., and flour mill workers at Seaforth, Ont.

The record does not include minor strikes such as are defined in another paragraph, nor does it include strikes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated.

Strikes and Lockouts in Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the March, 1945, issue in the review "Strikes and Lockouts in Canada and Other Countries". The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the various countries for which such figures are available but many countries are no longer reporting due to unsettled conditions following the war. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British Ministry of Labour Gazette publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in November, 1945, was 219, and 15 were still in progress from the previous month, making a total of 234 during the month.

There were 87,700 workers involved and a time loss of 233,000 working days was caused.

Of the 219 stoppages which began during November, 20 arose out of demands for advances in wages, 65 over other wage questions, eight on questions as to working hours, 27 on questions respecting the employment of particular classes or persons, 93 on other questions respecting working arrangements and six over questions of trade union principle.

British India

Preliminary figures for August, 1945, show 49 work stoppages, involving 54,629 workers, with a time loss of 275,247 man-days. For September, 1945, the figures are 56 work stoppages, involving 65,025 workers with a time loss of 342,507 days.

New Zealand

Figures for the first 9 months of 1945 show 125 strikes in which 28,832 workers were involved and a time loss of 46,112 days was caused.

Prices

Prices, Retail and Wholesale, in Canada, January, 1946

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THE official cost-of-living index was fractionally lower in January, 1946 as indicated by a drop of 0.2 to 119.9. An index for foods declined 1.5 points to 132.8 due to a further sharp seasonal reduction in eggs which overbalanced higher prices for butter and fresh vegetables. Among other groups the miscellaneous series index rose 1.3 points to 110.9, reflecting higher health maintenance costs as well as a moderate increase in certain life insurance rates. The clothing index advanced 0.1 to an index level of 122.6 while other groups were unchanged as follows: rentals 112.3, fuel and light 107.1 and homefurnishings and services 119.5.

Retail Prices

The accompanying table on retail prices of staple goods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada at the date under review.

The prices of the staple food items included in the table are all used in the calculation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They

* For the period 1913 to 1934 the former series on the base 1926=100 was converted to the base 1935-1939=100.

† Commodities in the cost-of-living index excluding rents and services.

are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices was not warranted although chain store prices are used in the calculation of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities

represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a \$4 spread centred around each city average.

Table III is designed to show the variation in the retail prices of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding

TABLE III.—DOMINION AVERAGE RETAIL PRICE RELATIVES FOR STAPLE FOODS, AUGUST, 1939—JANUARY, 1946, WITH DOMINION AVERAGES OF ACTUAL RETAIL PRICES FOR JANUARY, 1946.

(a) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

(a) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

rents and services. This index is now being included in Table I.

The accompanying chart shows the trend of the cost of living and wholesale prices since the beginning of the present war compared with the trend in the period of 1914-1922.

Explanatory Note as to Cost-of-living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between \$600 and \$2,800 in 1938. The average expenditure was \$1,413.90, divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.50; clothing (11.7 per cent), \$165.80; home-furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index brought the total family living expenditure to \$1,453.80.

A description of the cost-of-living index, how it is calculated, and the complete list of items included in each of the principal groups, food, fuel, rent, clothing, home-furnishings, etc., with their weight, was published in the LABOUR GAZETTE for July, 1943, page 1057.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527, became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, 1941, except under the regulations of the Wartime Prices and Trade Board. The activities of the Board in the operation of the price control policy are summarized from time to time in the LABOUR GAZETTE.

Wholesale Prices, December, 1945

The general wholesale price index of the Dominion Bureau of Statistics rose 0.2 points to 103.3 in December; this index was 0.8 points above that for December, 1944. Vegetable products advanced from 96.6 to 97.0 during December reflecting higher prices for potatoes, onions, raw leaf tobacco, oranges

(a) First of month. (b) Middle of month. (c) Last week of month. (d) Quarterly. (e) New wartime price series on base December 1942 = 1000, computed quarterly beginning March, 1943. (f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised.

and hay, and these overbalanced weakness in rye. Non-metallic minerals were up from 101.4 to 101.7, supported by slightly higher prices for imported bituminous coal, gravel and crushed stone. The usual seasonal increase in freight rates for steel sheets moved the iron and steel group up from 115.1 to 115.2. Declines were noted in two groups. Animal products fell from 109.8 to 108.9 after a sharp reaction in egg quotations, which outweighed gains in live stock, poultry and silver fox skins. Chemicals and allied

products moved down from 98.9 to 98.8 due to decreases in sodium bicarbonate, copper sulphate, formaldehyde, and carbon black.

Canadian farm product prices rose 0.2 points to 106.3 in December, and had gained 3.0 points for the year. Main strength came from field products, in which an increase of 0.4 points to 94.9 reflected higher prices for potatoes, onions, raw leaf tobacco and hay. In the animal products section lower egg prices were mainly responsible for a decrease of 0.1 to 125.4.

Construction Industry in Canada, 1944

The Construction Branch of the Dominion Bureau of Statistics has published a statistical report on the activity of the construction industry during 1944.

The value of work performed by the Canadian construction industry in 1944 amounted to \$449,838,059 as compared with \$572,426,551 in the preceding year, a decrease of 21.4 per cent, according to returns received by the Dominion Bureau of Statistics from general, trade and subcontractors, municipalities, the Harbours Board, and Dominion and Provincial Government Departments. These figures cover alterations, maintenance and repairs, as well as new construction.

The value of building construction fell from \$301,884,888 in 1943 to \$220,299,940 in 1944. The construction of industrial buildings showed a sharp decline from \$140,396,554 to \$71,131,759, while the construction of armouries, barracks, hangars, etc., was reduced from \$58,216,173 to \$15,001,136. On the other hand, the value of residential building advanced from \$63,684,367 to \$83,927,360, institutional from \$13,148,233 to \$21,005,720, and commercial from \$26,439,561

to \$29,233,965. Construction work involving engineering, harbours, rivers, etc., declined from \$203,527,830 in 1943 to \$153,123,802.

In the industry as a whole, employment was provided for a total of 123,892 persons in 1944, recording a decrease of 31,408 from the total for the preceding year, while the aggregate of salaries and wages at \$197,703,984 was \$53,729,809 lower. The cost of materials used in 1944 was \$200,801,042, a decline in expenditure for this purpose of \$78,087,342. Reports received in 1944 totalled 16,121, an increase of 3,521 over the number received in 1943.

The influence of the war on the nature of building operations is shown in Table 1 which reveals the changes in the type of construction work undertaken during the war years.

General, trade and subcontractors were responsible for \$381,216,381 or 84.7 per cent of the value of work reported during 1944, Provincial Government Departments for \$36,520,088, Municipalities, \$23,782,546, Dominion Government Departments, \$7,014,450 and the Harbours Board, \$1,304,594.

TABLE 1—TYPE OF CONSTRUCTION 1939-1944

Type of Construction	1939	1940	1941	1942	1943	1944

New construction.....	\$	84,034,603	57,851,459	- 26,233,144
Alterations, maintenance and repairs.....	\$	13,715,404	16,362,890	+ 2,647,486

"From the figures published in this report, it is impossible to get the total value of public construction, as general, trade, and subcontractors do not give a breakdown of their operations into public and private construction."

New construction was undertaken to the extent of \$265,819,003, which was a decrease of \$156,604,648 or 37.1 per cent, while alterations, maintenance and repairs, \$184,019,056, represented an increase of \$34,016,156 or 22.7 per cent. New residential construction (under which is included dwellings, single, semi-detached or double, duplexes and apartment houses) totalled \$67,480,008, an increase of \$15,107,951 or 28.8 per cent.

The 97,125 persons reported as wage-earners showed a decrease in number as com-

pared with the previous year, wages paid, \$153,418,845, were \$54,288,671 or 26.1 per cent lower. General, trade and subcontractors reported the employment of 70,910 wage-earners, Provincial Government Departments, 14,959, Municipalities, 8,583, Dominion Government Departments, 2,185 and the Harbours Board, 488. As might be expected, the number of wage-earners varied considerably during the year. August with 122,606 was the month of maximum employment and February with 72,321 the minimum.

The provinces of Ontario and Quebec dominated the construction picture. Together they reported 65.9 per cent of the value of work performed, 64.6 per cent of the employment given and 66.4 per cent of the salaries and wages paid.

Fatal Industrial Accidents in Canada During the Fourth Quarter of 1945

There were 319 fatal industrial accidents in the last quarter of 1945, according to the latest reports received by the Department of Labour. In the previous quarter there were 361, including 46 in a supplementary list.

These totals are compiled from reports received from provincial Workmen's Compensation Boards, the Board of Transport Commissioners, certain other official sources, and LABOUR GAZETTE correspondents. Newspaper reports are also used to supplement these data.

In the transportation and public utilities group 60 deaths were recorded. Of these 26 were in steam railways, 17 in water transportation, and 13 in local and highway transportation. In the previous quarter 96 deaths occurred in the transportation group, including 31 fatalities in steam railways, 12 in water

transportation, and 25 in local and highway transportation. There was no disaster (five or more deaths) similar to the elevator explosion at Port Arthur which caused 22 deaths in the previous quarter.

Industrial fatalities in manufacturing decreased to 60 from 67 in the previous quarter. There were 18 in iron, steel and products, and 11 in pulp, paper, and paper products. The remainder of the fatalities in the manufacturing group were divided in smaller numbers among the other manufacturing sub-groups.

Fatalities in the construction trades decreased to 33 from 46 in the previous quarter. Fatal accidents were fewer in highway and bridge construction, railway, and miscellaneous construction industries. Deaths in the construction of buildings and structures dropped to 24 from 27.

Of the 36 mining accidents, 21 were in metalliferous mining, nine in coal mining, and six in non-metallic mineral mining and quarrying. In the previous quarter 38 deaths were recorded in mining; 23 of them in metalliferous mining.

In trade, fatalities increased to 20 from six in the previous quarter. Four deaths resulted from hold-ups.

Agricultural fatalities went down from 42 to 30. However, logging accidents increased sharply to 46—a rise of 20 over the previous quarter. There were four unclassified industrial deaths.

Ontario (see Table II) registered the highest number of industrial fatalities with 130. There were 32 in manufacturing and 28 in transportation. Quebec had 65 industrial deaths, including 15 in manufacturing and 11 in transportation. Sixty accidents occurred in British Columbia, 26 of which were in logging. Six of the 18 industrial fatalities occurring in Alberta were in agriculture.

Of the total of 319 deaths, 118 occurred in October, 107 in November, and 94 in December.

Meeting of officers of war labour boards

War Labour Board.

The meeting discussed and considered the effect of Order in Council P.C. 348 passed on January 31, 1946, which amends the Wartime Wages Control Order, 1943 (L.G., Feb., 1946, p. 140) and to discuss the administration of wage control in the light of the amendments.

The conference was addressed by the Honourable Humphrey Mitchell, Minister of Labour, the Right Hon. J. L. Ilsley, Minister of Finance, and Mr. Donald Gordon, Chairman of the Wartime Prices and Trade Board.

The Honourable Mr. Justice M. G. Archibald, chairman of the National Board, presided at the meetings.

Annual summary of strikes and lockouts

Elsewhere in this issue (p. 365) appears the annual summary of strikes and lockouts in Canada and other countries. Revised figures show that there were two less strikes in Canada during 1945 than in 1944, but that the number of workers who took part in strikes was somewhat larger, and that the time loss was approximately three times as great.

A single strike, at the Ford Motor Company, Windsor, accounted for 915,000 of the

total of 1,457,420 working days lost through industrial disputes during 1945. In 1944 the total time loss was 490,139 days.

Of the 197 strikes and lockouts taking place during the year, 50 were over wage disputes, and 60 were over other matters affecting wages and working conditions. Union questions caused 39 strikes, of which 10, including the Ford strike, were for union security. There were only three small strikes for union recognition, which had been a major cause of labour disputes prior to the introduction of the Wartime Labour Relations Regulations in 1944.

Farmers urged to make use of National Employment Service

the shortage of farm workers during the war years and predicted that with the probable expansion of peacetime activities in other industries it will still be difficult to secure experienced help this season.

"Because of this possibility we would urge you to employ labour that may be available now," the letter states. "Not only will increased winter work help to reduce your labour requirements during the busy spring and summer months, but you will be more likely to have efficient and steady help familiar with your operations at those times when you need it most." With the letter an order form

In a message sent out to farmers in February, the Honourable Humphrey Mitchell, Minister of Labour, and Mr. Arthur MacNamara, Deputy Minister of Labour referred to

is provided which farmers are urged to complete and take or send to the nearest local office of the National Employment Service or the nearest Agricultural Service indicating particulars of their labour requirements.

Commenting on the farm labour situation for 1946, Mr. MacNamara said: "We are prepared to do everything possible through the Dominion-Provincial Farm Labour Program and the National Employment Service to see that labour is available where and when it is needed for the 1946 crop. Between 350,000 and 400,000 agricultural workers were taken off farms during the war years, and no doubt a good many of these workers will be going back. Farm wages are much higher now than they were before the war, and some workers have been figuring out after their experience as city dwellers that, given a reasonable standard of farm wages, they would be better off on the farm from a monetary point of view than at work now available to them in industrial centres. What appeals to this group of people is of course year round farm activity with good accommodation and we are appealing to farmers to let us know where these opportunities exist.

"For the peak periods we plan to make full use of all the possible sources of help to farmers," Mr. MacNamara continued. "The year 1946 may become a milestone in the history of civilization in that this year for the first time there is a combined world effort to produce and distribute food on the basis of world need. Helping to produce food this year will be a chance for Canadians to fight the war against famine, and we are confident of the fullest public support of any measures that may have to be taken to meet emergency farm labour situations as they develop at different times and different places. Last year men from the military establishments in Canada filled in many of the gaps particularly in the harvest period. Urban dwellers worked in their vacation periods in camps especially in the fruit picking districts, and some help was obtained from the Indian Reserves. Harvest excursions brought men from the west to the east for haying and again from the east to the west for the later western harvest. The co-operative effort of the Provincial Agricultural Services and the Dominion Department of Labour was an effective piece of team work. Our intention is to try all these methods, and any others that the present situation may suggest, as they become necessary. In the meantime farmers will help us considerably by letting their local agency handling farm labour know their requirements."

Employment and industrial statistics

The table on the opposite page gives the latest statistics available reflecting industrial activity in Canada.

The index of industrial employment, published by the Dominion Bureau of Statistics, declined to 167.9 at the beginning of January, 1946, from 173.2 at the beginning of December, 1945. The monthly index of wholesale prices increased fractionally to 103.9, while the Bureau's cost-of-living index remained unchanged at 119.9. An increase of 2.4 points was noted in the index of the physical volume of business (195.4 at January 1). Although industrial production, manufacturing and exports, among the components of this index, indicated a lowered volume of production, gains were noted in all the others.

Employment and earnings.—Industrial employment generally at the beginning of January in each year since 1920 has shown a recession, resulting from curtailment of construction work, shutdowns during the holiday season, for inventory, and various other factors. The contraction at January 1, 1946 involved the release of about 54,200 men and women; the latest reduction was greater than at January 1 in any earlier winter since 1940, although the percentage decline was below the average in the last 25 years. The index of industrial employment at January 1 during the war years increased from 108.1 in 1939 to 180.4 in 1945.

The decrease in the employment index was due mainly to seasonal contractions in manufacturing, mining, local and water transportation, construction and maintenance, and services. The largest reductions were 22,400 in manufacturing and 30,900 in construction as a whole.

A total working force of 1,717,888 at January 1 was reported by 15,590 reporting employers. The aggregate weekly payroll decreased by 8.5 per cent from the previous month to a total of \$51,281,598 at the date under review. At the same time, per capita weekly earnings dropped to \$29.85 in comparison with \$31.63 at the beginning of the previous month, and \$30.10 at January 1, 1945. The average was \$29.69 in 1944, \$27.92 in 1943, and \$26.13 in 1942.

Prices.—The general index of wholesale prices (base 1926 = 100) rose slightly to 103.9 in January, 1946, from 103.3 in the preceding month and 102.8 in January, 1945.

The Bureau's cost-of-living index (base 1935-39 = 100) remained unchanged at 119.9 for February 1, 1946. A further small decrease in the food section, due to seasonal influences, was balanced by small increases in home furnishings and clothing. The decline in foods

STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

Note.—Official statistics except where noted. Much of the statistical data in this table, with an analysis, are included in the *Monthly Review of Business Statistics* issued by the Dominion Bureau of Statistics.

² Daily averages.

³ Base June, 1941=100.

⁴ Base 1935-1939=100.

⁵ Adjusted, where

necessary, for seasonal variation. ⁶ Notes in the hands of the public at the end of the month. ⁷ Figures for four weeks ended February 23, 1946, and corresponding previous periods.

from 132.8 for January to 132.5 for February was due mainly to lower prices for eggs and citrus fruits, with fresh vegetables advancing moderately. The home furnishings and services group index increased from 119.5 to 120.1, and the clothing group index moved from 122.6 to 122.7. Groups remaining unchanged were: rentals at 112.3, fuel and light at 107.1, and miscellaneous items at 110.9. The wartime increase in the cost-of-living was 18.9 per cent.

Physical volume of business.—An advance in the index of the physical volume of business from 193.0 in December to 195.4 in January was a continuation of an improvement noted in December, which reversed the downward trend of the previous two years. The general index of distribution, covering railway traffic, commodity distribution, and external trade, rose to 198.7 from 189.8 in December. The index of imports rose from 170.0 to 203.9; exports, however, declined from 232.8 to 227.9. Increases were shown in the production of electric power and in new business obtained by the construction industry. The index of manufacturing recorded a decline, however, with the result that the index of industrial production decreased slightly from 194.5 in December, 1945, to 193.9 in January, 1946. Productive operations, due to the marked reduction in the output of war supplies, were at a lower level in 1945 than in 1944. The index of the physical volume of business declined 10.3 per cent. It still indicated, however, a higher level of production than in any other year except 1943 and 1944.

The index of industrial production declined 14.3 per cent, and mineral production, 30.5 per cent. The value of contracts awarded and building permits increased by 40.1 per cent and 41.7 per cent respectively. A decrease of 35.2 per cent in hog slaughterings was offset by an increase of 29.1 per cent in cattle slaughterings. Factory cheese production increased by 1.4 per cent, while butter production declined 1.7 per cent. Declines of 6.2 and 9.2 per cent respectively were indicated in the value of exports and imports.

Canadian Congress of Labour issues statement on wage policy In a statement on wage policy, issued on February 14 following a meeting of its Executive Council, the Canadian Congress of Labour declared that it will support to the utmost of its ability the efforts of its constituent unions to reach the following objectives:—

1. a general increase in wages, in order to provide an adequate wage income to ensure every worker a higher standard of living;

2. a reduction in working hours to forty hours or less per week, with the same or higher "take home" pay;
3. the increase in production of consumer goods to the utmost possible extent, with a view to preventing increases in prices;
4. the maintenance of a policy of price-control and subsidy of agricultural products and other necessities of life, in the belief that if Canadian industry is properly organized and co-ordinated, no general increases in prices are necessary to meet increased wage-rates.

The Congress also declared that "the failure of the Government to replace the present National War Labour Board, in which the workers have completely lost confidence, with a fully representative Board which would have power to determine wage-rates upon a basis of what it considered fair and reasonable, as repeatedly recommended by the Congress, and the relaxation of price-levels at the request of industry, leaves the Congress no alternative but to demand the abolition of the Wartime Wages Control Order and the restoration of freedom to determine wage-rates by the process of collective bargaining."

Agreement signed at Ford Motor Company

Following publication of the arbitration award of Mr. Justice I. C. Rand on the issue of union security in the dispute between the Ford Motor Company of Canada and its employees, members of the International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, an agreement was signed by the company and the union embodying the terms of the award.

A summary of this agreement appears elsewhere in this issue, on page 315. The text of the arbitration award was published in the January issue of the LABOUR GAZETTE (p. 123), and reprints are available upon application to the Department.

Royal Commission to-examine salaries of senior civil servants

A Royal Commission has been appointed to examine and make recommendations on the salaries, classifications and working conditions of senior administrative personnel in the Civil Service.

The Commission will consider:

1. Scales of pay, classifications and working conditions of senior administrative officers including deputy heads, in all departments and agencies of the Government;

2. Relationship of salaries and working conditions as between senior personnel in the various branches of the Civil Service;

3. The number of administrative officers required for efficient operation of the Government staff;

4. Opportunities for promotion and transfer of senior officials and the procedure by which all four points may be kept under review.

In announcing the appointment of the Commission, the Prime Minister, Rt. Hon. W. L. Mackenzie King, declared: "It is essential that the administration of public affairs be carried out with the highest competence and efficiency. For many years there has been a steady growth in the range and complexity of Government responsibilities. Against the background of a terrible war, we are now in the midst of carrying out the urgent responsibilities of postwar reconstruction. The tasks of Government during this transition, and in the maintenance of prosperity and peace in the future, will be both intricate and difficult.

"In recent years the Government has encountered serious and increasing difficulties in attracting adequately-trained personnel for the senior administrative positions in the public service. At the same time, many have been lost to private industry and to the professions, where substantially better opportunities have existed.

"All this makes it desirable that there should be authoritative and independent review of the position of senior administrative personnel in the Civil Service with the purpose of achieving a high standard of efficiency in the conduct of public business."

The three Commissioners are: Mr. Walter L. Gordon, C.A., Toronto, chairman; Major General Edouard deB. Panet, C.M.G., D.S.O., Montreal; and Sir Thomas Gardner, G.B.E., K.C.M.

New labour legislation forecast in provinces

Legislation of interest to labour has been forecast by the Government in three of the Provinces in which the Legislature is in session, Ontario, Saskatchewan and Quebec.

The Speech from the Throne in Ontario referred to a new Minimum Wage Act for men and amendments in the present Minimum Wage Act for women workers to bring the provisions into line with the Hours of Work and Vacations with Pay Act and present-day needs. Also planned is the introduction into all industry of the system which was adopted by regulation last year for the building trades for calculating the holiday pay at two per cent of earnings. Amendments with respect to mothers' allowances and workmen's compensation are also contemplated.

In Saskatchewan, minor changes are to be made in the Trade Union Act and the Workmen's Compensation Act is to be extended. Speeches in the House indicate that the Act will be applied to hotels and restaurants and to shops. A new Child Welfare Bill will also be introduced.

Quebec proposes to set up a ministry to deal with social welfare and all problems concerning youth. Further legislation for the protection of labour is also forecast in Quebec.

Proposals for labour legislation in British Columbia

On January 18 a delegation representing unions of the Trades and Labour Congress and the Canadian Congress of Labour, met with the British Columbia cabinet and presented a program of proposed labour legislation for the next session of the legislature.

Proposals for a 40 hour week, a minimum wage rate of 60 cents an hour, two weeks' annual holiday with pay and the establishment of an overtime scale based upon an eight hour day, were contained in the brief.

The delegates urged the Provincial Government to continue to press for enactment of a federal labour code with provincial administration. They also advocated the immediate preparation of a provincial labour code to replace federal Order in Council P.C. 1003, in the event of its removal by the Federal Government.

The Workmen's Compensation Act of the Province was in urgent need of revision, the delegates declared. Their suggested improvements included substantial increases in benefit payments and a more comprehensive coverage for workers.

The brief also favoured a National Health Insurance Act, which would provide full medical, surgical and hospital services; and a minimum old age pension of \$50 a month based upon an age level reduced to 60 years of age.

Credit unions show consistent growth in Canada

Thirty years ago there were 91 credit unions in Canada, with 23,000 members and \$2,000,000 in assets. By 1944, the number had risen to 2,006, and the number of members had increased to 474,841. Assets had grown to \$92,574,440.

According to a report in the February issue of *The Economic Analyst*, published by the Federal Department of Agriculture, the number of credit unions had increased by twelve per cent over 1943, membership increased by 27 per cent and actual loans granted during 1944 increased by 125 per cent. It is pointed out that the credit unions are evidently keeping their funds in circulation and are fulfilling

their functions as providers of funds for "provident and productive purposes". During 1944, credit unions made available credit of \$36,000-000 to nearly 500,000 Canadians.

The credit union movement took its rise in Quebec and that province still leads the others by a wide margin in every phase of credit union activity. Nevertheless, unions have become well established in all of the provinces. Perhaps the most notable development during 1945, was the establishment of a Canadian Federation of Credit Unions in November. At present, the Federation consists of representatives of each provincial league.

Reference was made in the January issue of the LABOUR GAZETTE (p. 55) to the report of the Royal Commission on the taxation of co-operatives, in which it was recommended that tax exemption on the income of credit unions be continued and that the provisions of the Income War Tax Act with respect thereto be clarified.

Handbook on union agreements

The Research Department of the Canadian Congress of Labour has published *A Handbook on Union Agreements*. Its purpose

is to assist local chartered unions in drawing up agreements for negotiation with employers. It contains clauses covering subjects usually contained in collective agreements and in many cases provides more than one clause for each subject dealt with in order to meet varying conditions.

The order of presentation follows the sequence usually adhered to in actual agreements. The subjects and order of appearance are listed below:—

Opening Phrase, Preamble and Purpose, Mutual Obligations or Relationship, Union Recognition, Management Rights, Strikes and Lockouts, Union Security, Check-off, Hours of Work, Grievance Procedure, Arbitration, Meetings between Company and Union, Discharge Cases, Seniority, Lay-Offs, Leave of Absence, Vacations with Pay, Minimum Recompense, Admission of Union Representative to Company Property, Miscellaneous Wage Provisions, Sick Leave, Health and Safety, Labour - Management Committees, Bulletin Boards, Dues Collection Other Than by Check-off, Miscellaneous Provisions and Duration of Agreement.

English trade union makes inquiry into industrial health and welfare

The Amalgamated Engineering Union has been conducting an inquiry into health, welfare, and safety conditions as they affect its members, according to a statement in the

November 1945, Monthly Journal of the union. A questionnaire was circulated to

shop stewards and active workers covering temperature, ventilation, dust, fumes, dampness, overcrowding, lighting, seats for workers, cloakrooms, washing facilities, lavatories, and sanitary arrangements generally. The returns related to 988 firms with 1,253 establishments covering 1,300,000 workers. The size of the establishments ranged from shops employing 25 to 50 workers to plants with 10,000 or more. Thus were brought out the variations in conditions in different sizes of establishments, type of product and ownership.

Ventilation and temperature, it was found, were consistently better in smaller plants with from 25 to 250 workers; and Government establishments showed a better record than private firms. It is pointed out that bad ventilation, black-out and unsatisfactory temperatures took their toll in headaches, eyestrain, listlessness, digestive troubles and fatigue, and that in many plants the problem of ventilation is dealt with in such a way as to result in colds, because of draughts through open doors and windows.

Inadequate washing facilities and cloakrooms, the lack of provision for drying wet clothing, poor sanitary arrangements and unsatisfactory lighting are the cause of numerous complaints; overcrowding was complained of in 15 per cent of the plants. Many of these conditions obtained to a much greater extent as a result of wartime crowding and the scarcity of labour and materials. Some requirements of the Factories Act, 1937, it has been impossible to carry out under the wartime and still existing shortage of equipment.

Government establishments were significantly better than the average with respect to work hazards, according to the report, and shipyards and railway shops were worse. Serious risks of accident exist in 28 per cent of the railway shops investigated, and in 33 per cent of the shipyards. The report notes that it is in the shipyards that workers have the lowest proportion of representation on works safety committees. Another finding is that 77 per cent of the shops with generally poor conditions had no safety committees.

The report concludes by emphasizing the need and value of closer co-operation between the trade unions and the Factory Department of the Ministry of Labour and National Service.

Training of teachers in United Kingdom

The United Kingdom Ministry of Education has announced the inception of new teachers' training regulations designed to open up the widest possible field of recruitment to the teaching profession by eliminating the cost of learning to members of low income families.

Students in training colleges will receive free tuition and pay no boarding fees if their parents' income is less than £300. Parents with incomes above £300 will contribute fees proportionate to their income. The full charge, payable only by parents in the upper income groups, will not usually exceed a hundred pounds a year. All costs are to be met from public funds.

The intention of the regulations is to remove the inaccessibility of teacher training to suitable students because of inability to pay the necessary fees, and to assist training colleges to expand their facilities. It is proposed to meet the immediate housing situation by renting houses as hostels, or adding accommodation to colleges by temporary or light construction.

Broadly similar arrangements have been made for students at university training departments. Special maintenance grants are to be given to recognized day students at training colleges and university training departments. Hitherto, it was necessary for parents to meet substantial charges if they were unsuccessful in receiving loans or grants from local authorities or other special funds. As it will no longer be necessary for local authorities to advance assistance to needy students, all expenditures on maintaining training colleges will be pooled and divided amongst these authorities to equalize expenses throughout the country.

Australian conference on silicosis

A conference of representatives of the Australian Commonwealth and State Governments to discuss the problem of silicosis was held in Sydney, New South Wales, in October, 1945, at the invitation of the Premier of that State, according to the October issue of the *New South Wales Industrial Gazette*. Among the representatives were medical officers, officials of Labour and Mines departments, and the chairman of the Silicosis Schemes in South Australia. The purpose of the conference was to learn what each State was doing to meet the problem with a view to assisting each other. The agenda included preventive measures, periodical examination, the degree of pulmonary fibrosis which causes incapacity, uniform compensation payments, and rehabilitation.

An initial medical and radiological examination for workers entering an industry with a silicosis risk, followed by clinical and radiological examinations at least every two years, the workers to be informed of the results, was an important recommendation. Legislation by the States requiring "facing" or "parting" powders to be correctly described

or labelled and prohibiting a free silica content greater than two per cent in these powders, was also recommended.

Uniform publicity throughout Australia to make employers and workers conscious of hazards from uncontrolled dust was advised. Encouraging employers to install dust prevention devices by merit rating, where the risk is insured, and higher levies on employers who contribute to a silicosis fund but do not take adequate steps to minimize risks, was also urged. Another recommendation was the use of the Foundry Code proposed by the Commonwealth Department of Labour and National Service. The conference also proposed that where employees are exposed to dust containing free silica, average concentrations should not exceed 500 particles, less than 10 microns in size, per cubic centimetre of air if the free silica content is less than 50 per cent, or 200 particles per cubic centimetre of air if the silica content exceeds 50 per cent.

Other suggestions were that a third International Conference on Silicosis should be called by the Governing Body of the International Labour Organization, that the provisions of Workmen's Compensation Acts in Great Britain, the U.S.A. and Canada, in relation to dust diseases, should be studied, that the visit to America of the Medical Officer in charge at Broken Hill, should be made as soon as possible, and that the Conference meet again when investigations are completed.

Fact-finding boards in United States

On December 3, President Truman asked the United States Congress to pass legislation providing for 3-man fact-finding boards to investigate important nation-wide disputes in cases where collective bargaining had broken down and the Labour Department's Conciliation Service had failed to effect an agreement.

A board would be composed of three or more "outstanding citizens", and would be directed to "make a thorough investigation of all facts which it deems relevant in the controversy." The fact-finding board would have the right to subpoena any witness or records which it believed pertinent, and would be authorized to make its report in twenty days. Strikes or lockouts would be forbidden from the time the Secretary of Labour certified the case to the President until five days after the fact-finding board made its report. The report would not be binding on the parties to the dispute but would be expected to influence public opinion to the extent that it usually would be accepted as a basis for settlement.

The procedure proposed by the President is modelled on the provisions of the Railway Labour Act. It bears a resemblance also to the Canadian provision for Boards of Conciliation under the Wartime Labour Relations Regulations and previously under the Industrial Disputes Investigation Act.

Draft legislation to implement the President's proposal was subsequently introduced in Congress.

Without waiting for Congressional authorization, the President by executive order appointed fact-finding boards to investigate a number of disputes, including those at General Motors and the United States Steel Corporation. (L. G., Feb., 1946, p. 138).

Curbs on "wildcat" strikes in recent collective agreements in U.S.A.

Contracts signed in the United States recently by the United Automobile Workers (C.I.O.) and three employers in the automobile industry have contained clauses aimed at curbing strikes not authorized by the union, and thus establishing a form of so-called "company security".

The agreement reached with the Ford Motor Company provides that employees guilty for the first time of instigating or promoting such "wildcat" strikes may be suspended for a two-week period and those guilty for a second time may be discharged. Such cases will not be subject to the regular grievance procedure unless the union can prove an employee was unjustly accused. In preliminary negotiations both parties had suggested that the company be given the right to impose financial penalties against participants in unauthorized strikes, but the agreement in its final form includes no such penalties. (In Canada the agreement recently signed between the Ford Company and the U.A.W. in accordance with the terms of the Rand arbitration award provides for a fine of \$3 a day and loss of seniority for a worker participating in a "wildcat" strike.)

The new contract continues in effect the union shop and check-off. It also gives the company the right to dismiss an employee who continually fails to produce on the basis of the established production standards, but before the employee can be discharged the union may have a study made of the applicable standards. Another clause provides for an impartial study of production standards if union representatives hold them to be excessive, such investigation to be made by an independent time study engineer selected by both sides, whose decision would be binding on both.

The agreement reached with the Chrysler Corporation contains a clause which reads: "The union agrees that it will not oppose the discharge or discipline of anyone who instructs, leads or induces another employee to take part in any unauthorized strike."

The contract between the Kaiser-Frazer Corporation and the U.A.W. contains a unique form of "company security". It provides for a "security trust fund" which will be built up by a company payment of \$5 for each car produced. At the end of the year the fund pays a production bonus to employees who have worked at least ninety days before the termination of the plan, provided they have worked a set percentage of the scheduled hours and have not been involved in any unlawful strike action. Thus, the fund in effect penalizes employees for absenteeism and participation in strikes or stoppages.

The fund is handled beyond control of the company by three trustees, one named by the union, one by the company and a third person acceptable to both. An umpire whose salary and expenses are shared equally by union and company will make final decision as to any disqualification of a worker.

The contract also provides for union shop and check-off.

Settlement of dispute in U.S. steel industry

The strike of the United Steelworkers (C.I.O.) against a number of United States steel companies (L.G., Feb., 1946, p. 138) ended in mid-February on the basis of a wage increase of 18½ cents per hour. This was counterbalanced by a price advance of \$5 a ton for steel allowed the companies by the Government. Some 750,000 workers had been involved in the dispute, which began on January 20.

United Mine Workers of America rejoin A.F.L.

The United Mine Workers of America rejoined the American Federation of Labour late in January. The President of the Mine Workers, Mr. John L. Lewis, was given a seat on the executive council of the A.F.L., as 13th vice-president. Mr. Lewis broke with the A.F.L. in 1935, to become leader of the Committee for Industrial Organization, which was formed by a group of international unions to promote union organization, particularly in mass production industries, on an industrial rather than a craft basis, following the refusal of the 1935 convention of the A.F.L. to sponsor such action.

When the Congress of Industrial Organizations was established in 1938 Mr. Lewis became president, an office which he retained

until 1940 when he was succeeded by Mr. Philip Murray. Subsequently the Mine Workers withdrew from the C.I.O.

In returning to the A.F.L., Mr. Lewis presented dues for the month of January of \$9,000 representing 600,000 members.

Labour Education Committee set up in U.S.A. A Labour Education Advisory Committee, representing equally the American Federation of Labour and the Congress of Industrial Organizations,

was appointed on February 24 by the United States Department of Labour, as a means of helping to improve labour-management relations.

The new committee is the outgrowth of experimental work by the Department on standards and approaches to the problem of labour education, including techniques of steward training which, according to the Secretary of Labour, Mr. Lewis B. Schwellenbach, "have definitely contributed to the speedier settlement of plant grievances."

The Secretary declared: "An intelligent program of labour education, directed both toward the training of capable union leadership and a membership well informed in the rights and responsibilities of unionism, can do a great deal to forestall labour disputes and promote better labour-management relations."

Labour affiliation with United Nations Economic and Social Council The World Federation of Trade Unions and the American Federation of Labour have been granted consultative status with the United Nations Social and Economic Council.

The International Co-operative Alliance has also been given the right to participate in the Council in an advisory capacity.

Forthcoming I.L.O. meetings The next full conference of the International Labour Organization will be held in Seattle, Washington, from June 6 to

June 29. It will be the 28th conference of the I.L.O. since the Organization was established in 1919, and will be devoted exclusively to the consideration of minimum international standards governing the working conditions of seamen.

The agenda of the Seattle conference will comprise nine items, one of which will be a report by the Acting Director, Mr. E. J. Phelan. The others are social security for seamen; crew accommodation; food and catering for crews; entry, training and promotion; holidays with pay; continuous employment; recognition of seamen's organizations; and wages, hours and manning.

The conference will have before it nine draft conventions, two draft recommendations and three resolutions covering the various questions on the agenda. These were framed at a preparatory technical maritime meeting at Copenhagen in November. If they are approved by the conference, they will go to the Governments of the member countries of the I.L.O. for possible ratification.

The conference will be attended by tripartite delegations from all countries with merchant marines, and probably from several others. Each member country of the I.L.O. is entitled to participate. The delegations will be composed of two government members, one representative of the seamen, and one of the shipowners. Each of the delegates may be accompanied by two advisers for each of the items on the agenda.

The 29th session of the conference, which will deal with more general questions, including the amendment of the Organization's constitution, will be held in Montreal beginning September 19.

Other I.L.O. meetings to be held in the near future include a regional conference of American member states of the I.L.O. This will be the third American regional conference, the previous two having been held in Chile in 1936, and in Cuba in 1939. It will take place in Mexico City beginning April 1, and will bring together delegations from the eighteen North, Central and South American States which are members of the Organization. El Salvador, Honduras, Nicaragua, and Paraguay, the only American countries that are not I.L.O. members, have been invited to send observers. The delegations will be tripartite, comprising two government members, one representative of management and one of labour, together with their advisers.

The agenda of the conference will cover four items: labour inspection; vocational training; industrial relations; and a director's report on the social and economic problems of the Americas.

The Governing Body of the I.L.O. will hold its 98th session in Montreal beginning May 14. Two industrial committees will meet in Cleveland, the steel committee beginning April 23, and the metal trades committee beginning May 2.

The United Kingdom Ministry of Labour and National Service has recently set up a personnel management section within its Factory Department. The section will furnish advice to employers with respect to the organization, development and improvement of personnel departments in factories and other establishments, and will also be available to advise other branches of the Ministry on various aspects of personnel management.

Union Status in Collective Agreements in the Manufacture of Non-Ferrous Metal Products, Non-Metallic Mineral Products and Chemical Products, Canada, 1945

A file of collective agreements has been maintained in the Department of Labour for many years and summaries of representative agreements have been published each month in the *LABOUR GAZETTE*. The Research and Statistics Branch has undertaken to make analytical studies of current agreements on file, by industry and by topic. The first, covering the Pulp and Paper Industry, was published in the *LABOUR GAZETTE* for April, 1945 (p. 539) and the second on *Union Status in the Manufacture of Iron and Steel and their Products* in the issue of October, 1945 (p. 1426) with revisions in the November issue (p. 1613). The third, covering union status in agreements in three additional manufacturing groups, is given below.†

Summary

An analysis has been made of collective agreements on file in the Department of Labour and in effect at the end of December, 1945, in the following three industries: the manufacture of non-ferrous metal products, non-metallic mineral products, and chemical and allied products. The agreements were obtained from employers and unions.

Manufacture of Non-Ferrous Metal Products

The number of workers covered by collective agreements in the manufacture of non-ferrous metal products at the end of December, 1945, was 48,440. The agreements covered 119 establishments.

Information is not available as to the number of plants and the total number of workers in this industry for the year 1945 but it is probable that they do not differ materially from the figures for 1944, when according to preliminary statistics issued by the Dominion Bureau of Statistics there were 614 plants and a total average of 104,056 employees.

Of the workers under agreement, 76 per cent are represented by national or international unions.

Agreements with no requirements as to union membership* are effective for 94.9 per cent of the workers under agreement; agreements with maintenance of union membership* with no compulsion as to joining the union are effective for 3.8 per cent; agreements providing for union shop* conditions

for 1.0 per cent; and agreements providing for closed shop* for 0.3 per cent of the workers.

The check-off* is provided by agreements covering 21.8 per cent of the workers under agreement.

Manufacture of Non-Metallic Mineral Products

Collective agreements affecting 106 establishments and 13,212 workers in the manufacture of non-metallic mineral products were on file in the department and in effect at the end of December, 1945. Figures issued by the Dominion Bureau of Statistics indicate that in 1944 there were 747 plants in the industry and a total average of 31,234 employees.

Of the workers under agreement, 54 per cent are represented by national or international unions.

Agreements with no requirements as to union membership are effective for 81.2 per cent of the workers; agreements with maintenance of union membership for 5.2 per cent; agreements providing for union shop for 13.3 per cent; agreements providing for closed shop for 0.3 per cent. Agreements providing for preferential hiring of union members are in effect for 4.7 per cent of the workers under agreement.

The check-off is in effect for 18.9 per cent of the workers under agreement.

Manufacture of Chemicals and Allied Products

Collective agreements affecting 54 establishments and 9,268 workers in the manufacture of chemicals and allied products were in effect and on file in the Department at the end of December, 1945. Total employment in this

†Reprints of each of these three articles are available on request.

*Definitions of these terms are given in the Introduction.

industry in 1944 averaged 81,895, and there were 955 plants, according to the Dominion Bureau of Statistics.

National and international unions represent 53 per cent of the employees under agreement.

Agreements with no requirements as to union membership are effective for 82.2 per

cent of the workers; agreements with maintenance of union membership for 5.2 per cent; and agreements providing for union shop for 12.6 per cent. There are no closed shop agreements.

The check-off is in effect for 18.5 per cent of the workers under agreement.

NUMBER OF ESTABLISHMENTS AND NUMBER OF WORKERS UNDER AGREEMENTS IN THE MANUFACTURE OF NON-FERROUS METAL PRODUCTS, NON-METALLIC MINERAL PRODUCTS AND CHEMICAL PRODUCTS AND THE NUMBERS UNDER AGREEMENTS WITH NO REQUIREMENTS AS TO UNION MEMBERSHIP, MAINTENANCE OF MEMBERSHIP, UNION SHOP, CLOSED SHOP AND CHECK OFF PROVISIONS, 1945

Introduction

The majority of agreements on file in the Department of Labour are agreements between one or more employers and one or more unions, which unions are affiliated with one of the central international or national labour organizations. The rest are those between an employer and an independent union, a committee of employees, or an association of the employees of a single firm. This latter type of agreement sometimes provides that employees are free to join any labour organization of their choice.

The degrees of union security which agreements provide vary from those with no requirements as to union membership, with simple recognition of the union or other workers' organization, to the closed shop agreement.

Under agreements with *no requirements as to union membership* the union is recognized but there is no obligation as to union membership as a condition of hiring or continued employment. This recognition may in some cases extend only to the recognition of the union as the bargaining agency for its own members,

but the usual practice is to recognize the union as the bargaining agency for all employees who are eligible to be covered by the conditions of the agreement. Various qualifications to the agreements with no requirements as to union membership occur, such as the guarantee of freedom of employees to join or not to join the union which is the party to the agreement, or the guarantee of freedom to join any union. Many agreements with no requirements as to union membership as well as those providing greater union security, provide that no discrimination or coercion be exercised by the employer because of an employee's union membership or union activities. Similarly, in many agreements the union members undertake to refrain from coercing other employees to become union members. In some cases the employer agrees to encourage union membership and to co-operate with the union in obtaining members. Preference to union members when hiring new employees may be provided in agreements with no requirements as to union membership.

The *maintenance of union membership* clauses in agreements provide that employees who are or who later become union members must maintain their membership. In some cases employees who were members at the time the agreement was made are granted an "escape period" during which they may resign from the union. Union shop and closed shop agreements often have a special clause providing that the union membership must also be maintained. For the purpose of this study, however, maintenance of membership agreements are confined to those in which joining the union is not compulsory. Preference to union members when hiring new employees may be provided in the maintenance of union membership type of agreement also.

Union shop provisions require that all present employees who are not members as well as all new employees must join the union. In some cases present employees are exempted and the requirement applies only to new employees. The maintenance of this membership is sometimes implied and sometimes specifically stated in such agreements. Preference to union members when hiring new employees is sometimes present in connection with union shop provisions.

In the *closed shop*, as in the union shop, all employees must be union members, but under closed shop conditions new employees must be union members before they are hired. In case no union members are available, many agreements provide that non-union members may be employed either temporarily or per-

manently, but these must become union members.

A provision which is of assistance to the union in maintaining its paid-up membership under open shop or maintenance of membership agreements, is the check-off. In the case of the union shop or closed shop, since membership is compulsory, the check-off is simply a means convenient to the union for the collection of dues, etc. Check-off clauses may be included in agreements providing for any type of union security.

Under the *check-off* system, the employer deducts union dues and assessments from employees' wages and pays these over to the union. The voluntary check-off applies only to those employees who individually sign an authorization, which authorization may be for the duration of the agreement or until rescinded by the employee, this type of check-off may be part of any type of union security agreement, from simple recognition to the closed shop. The automatic check-off applies to all employees covered by the agreement and can therefore be part only of union shop or closed shop agreements.

Note re Statistics

The number of establishments is recorded rather than the number of agreements. In the great majority of cases an agreement covers only one plant or establishment. In the few cases in which one agreement covers more than one establishment, the number of establishments is counted. Where a number of individual unions each has a separate agreement with one establishment, the establishment is considered as the unit. The number of workers affected is known for all except three small plants. The figures in most cases were obtained from the employers late in 1945, but where these were not available the 1944 figure was used. The figures as to the number of plants and the average number of employees in the industries mentioned above in the Summary are those published by the Dominion Bureau of Statistics' Census of Industry for the year 1944.

This study differs from the previous one on union status in the iron and steel industry in that the agreements have not been analysed as to recognition of union and union committees, union activities, consultation between employers and unions, union label.

In the text which follows, union status provisions are shown for three manufacturing groups, with sample clauses quoted in smaller size print.

Non-Ferrous Metal Smelting and Manufacture of Non-Ferrous Metal Products

This manufacturing group is divided for the purpose of this study into four sub-groups: non-ferrous metal smelting and refining, the manufacture of brass and copper products, manufacture of electrical products, and the manufacture of other non-ferrous metal products.

Non-Ferrous Metal Smelting

Agreements are on file covering 13 smelters and refineries and 8,922 workers (Aluminum smelting is not included in this group but under "Other Non-ferrous Metal Products"). Except in two plants with 614 workers, the workers are represented by unions affiliated with national or international unions. About 85 per cent of the workers under agreement are represented by The International Mine, Mill and Smelter Workers' Union. In other agreements, the workers are represented by various craft unions affiliated with the American Federation of Labor, by the United Steelworkers of America and by a union directly affiliated with the Canadian Congress of Labour and by associations of employees.

In none of the agreements in this industry is there any requirement on employees either to join or to maintain membership in the union.

The check-off is provided for in agreements for eight plants, affecting 4,915 workers, in all of which the special authorization of each individual employee desiring the check-off is required.

In all of these plants, the authorization once given by the employee is irrevocable for the duration of the current agreement. The following is a sample clause:—

On receipt of a voluntary written authorization from an employee stating the amount of monthly dues to be paid, the company will deduct from the employee's pay on the second pay day of each month the said amount. The company will transmit to the authorized representative of the union the total deduction from the pay of all employees who have submitted written authorization on the following form:—

"I hereby authorize the Company to deduct from my pay on the second pay day of each month the sum of \$..... for union dues, this authority to continue for the life of the present collective bargaining agreement, but it is understood may be revoked by me in writing to the company at any time within 15 days of the signing of a new agreement or a renewal of the existing agreement.

"Signed
 "This authority can only be signed at the plant offices or the personnel office of Company and can only be revoked at the personnel office."

No preference is accorded to union officials in case of lay-offs nor to union members in hiring. In agreements covering 10 plants and 6,052 workers, the employers expressly retain exclusive rights as to hiring.

Agreements for four of the plants, covering 4,717 workers have a particular clause confirming the right of employees to join or to refrain from joining any union (or in one case the union party to the agreement).

It is agreed that the employees of the company are free to join any union or association of their choice, and are equally free not to join any union or association.

This privilege applies to the union which is party to the agreement, in the following example:—

An employee shall be free to join or not to join the union.

Agreements for 12 plants, affecting 8,572 workers, include clauses by which the employer agrees not to exercise discrimination against any employee because of his union membership or activities.

The company agrees that it will not use its functions to discriminate against any employee or jeopardize seniority standing or promotion or employment because of union activities or because of exercising any right provided herein or by law.

The agreements for the same 12 plants have clauses by which the union agrees to refrain from exercising coercion against any employee because of his non-membership in the union.

The union agrees that members of the union will not discriminate against or treat with hostility any employee, or jeopardize seniority standing or promotion or employment because of non-acceptance of union membership or because of exercising any right provided herein or by law, nor will the union or its members or anyone on its behalf coerce or threaten or intimidate employees not members of the union or solicit membership in the union on any other basis than free choice and voluntary inclination.

Brass and Copper Products

There are 24 plants covered by agreements in this industry, affecting 5,123 workers. Of these, 4,925 workers in 23 plants are represented by unions affiliated with international or national central organizations. These unions include the United Steelworkers of America, the International Moulders and Foundry Workers' Union of North America, the International Union of Mine, Mill and Smelter Workers, the International Association of Machinists, the International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, and others.

In this industry, there are agreements for three plants, affecting 584 workers, under which there are maintenance of membership provisions with no obligation on any employee to join the union; an agreement for one plant with 36 workers for union shop conditions; and for two plants with 72 workers for closed shop conditions. Eighteen plants and 4,431 workers are under agreements which have no requirements as to union membership.

Maintenance of union membership, with no obligation on any employee to join the union, is provided in agreements for three plants. In two of these, affecting 260 workers, no escape period is provided in which employees who are union members may resign from membership.

It is understood and agreed by the parties hereto that all employees who are members of the union at the time of the signing of this agreement and all employees who may join after the signing of the agreement shall remain members of the union during the life of the agreement.

In the third agreement, covering 324 workers, with maintenance of membership, an "escape period" is provided; that is, a short period after the signing of the agreement during which union members may resign their membership, if they wish.

Every present employee who is a member of the union shall be given a period of 15 days from the date upon which the agreement is posted as hereinafter provided, within which to elect in writing to be filed with the company, and the union committee, either to remain a union member, or to withdraw from the union. If he elects to retain his membership in the union, then the continuance of his membership during the life of the agreement shall be a condition precedent to his retaining his employment with the company.

Every employee, whether present or future, shall, once he becomes a member of the union, retain his membership in the union as a condition precedent to his continued employment with the company for the life of this contract.

This same agreement quoted above contains a limiting qualification which is occasionally added to maintenance of membership clauses.

The obligation of the company to discharge an employee for failure to retain his membership in the union, shall arise only if, in the opinion of the company, such an employee could be promptly replaced by an equally well-trained and competent employee; such decision of the company, if the union so desires, to be subject to appeal to the National Employment Service authorities.

Union shop conditions apply to only one establishment, with 36 workers, and in this case apply to both old and new employees.

Closed shop conditions are provided under agreements for two establishments affecting 72 workers.

The party of the first part agrees that only members of the in good standing will be employed. If the local union is unable to supply skilled mechanics or helpers, then the employer has the privilege of employing such help as required, conditional upon them becoming members of a union affiliated with the American Federation of Labor.

The check-off is provided in agreements for four plants affecting 1,583 workers, in all of which authorization by the individual employee is a prerequisite. In one of these plants, as in the case of all check-off agreements in the non-ferrous smelting industry, the authorization, once given, remains effective for the life of the agreement. In the other three plants concerned, the authorization of the employee for check-off may be withdrawn at any time. The following is an example of such revokable check-off provisions and it includes the specification of the amount which is to be deducted.

The company will, during the life of this agreement, if and to the extent authorized by each union employee, in the manner hereinafter set out, but not otherwise, deduct from the first pay cheque due to each such employee in each calendar month while such authority is in effect the sum of one dollar (\$1) and remit the same to the financial secretary of the union. Any such authority to the company shall be given in writing on the form set out in Schedule "A" hereto, and shall be signed in duplicate by the employee concerned and shall be witnessed. The original shall be left with the personnel officer of the company and the duplicate left with the financial secretary of the union. Any such authority shall take effect on the fifteenth day following its receipt by the company. Any such authority to the company shall be revokable at any time by an employee by notice in writing to the company. Any such notice of revocation shall be signed in duplicate by the employee concerned and shall be witnessed. The original notice of revocation shall be left with the personnel officer of the company and the duplicate left with the financial secretary of the union. Any such authority of revocation shall take effect on the fifteenth day following its receipt by the company.

In this manufacturing group, agreements for 16 plants, involving 3,523 workers, have the provision under which the employer retains exclusive rights to hire whom he wishes.

The management of the works and the direction of the working forces, including the right to hire, suspend or discharge for proper causes and the right to relieve employees from duty because of lack of work or for other legitimate reasons is vested exclusively in the employer, provided that this right will not be used for the purpose or purposes of discrimination against any member or non-member of the union.

Preference for continued employment for union officers, committeemen or stewards when lay-offs are being made is provided in agreements for four plants, affecting 908 workers.

Preference for union officers for work on the day shift is provided in one agreement, affecting 324 workers.

The chairman of the committee and president of the local union, if employed by the company, shall work on the day shift during their respective terms of office. In case of emergency, they may be transferred temporarily to other shifts.

In the agreement for one plant, affecting 119 workers, employees are guaranteed the right to join or refrain from joining any union, while for five plants, affecting 863 workers, this right refers only to the union party to the agreement.

By agreements for 15 plants, affecting 3,221 workers, the employer undertakes to exercise no discrimination against employees because of their union membership or union activities, while for 13 of these plants, with 2,836 workers, the union makes the same pledge with regard to non-union employees.

Electrical Products and Repair

A total of 35 plants and 19,010 workers are covered by agreements. Of these, 24 plants and 11,784 workers are covered by agreements in which the workers are represented by unions affiliated with international or national central organizations. In 18 of these 24 plants the workers are represented by the United Electrical, Radio and Machine Workers of America.

One plant with 425 workers is covered by an agreement for maintenance of membership, which provision is similar to the one with the "escape period" quoted above in the "Brass and Copper Products" section, the "escape period" in this case being 30 days. This clause, however, has two other qualifications, one of which gives the condition for forfeit of union membership.

No employee of the company who is a member of the union shall forfeit membership in the union except for non-payment of dues for a period of two months or more.

The other qualification to the maintenance of membership provision in this same agreement makes provision for cancellation of this condition if the union ceases to have a majority of the employees.

If the number of company employees, members of the union, should at any time become 50 per cent or less of the total number of employees eligible for such membership either by way of resignation within the thirty-day period herein above referred to and/or failure to become members of the union, then the obligation of the company

under this general provision for 'maintenance of membership' shall forthwith terminate.

Two agreements involving 239 workers have union shop provisions, in one case applying only to new employees, in the other to both present and new employees. In both cases the unions concerned are not affiliated with an international or national union.

The check-off is provided in agreements for ten plants, affecting 2,838 workers. In all cases it is effective only on authorization by the individual employee. In three of the ten agreements no stipulation is made as to whether the check-off may or may not be cancelled by the employee who has once authorized it. Under the other seven agreements, the employee may revoke his authorization if he wishes.

The employer retains exclusive rights as to hiring under agreements for 26 plants, affecting 15,644 workers.

Preference in continued employment to union officers, committeemen, and/or stewards when lay-offs are being made is provided in agreements for six plants, affecting 1,789 workers.

Agreements for 12 plants, affecting 6,949 workers, specially state that employees are free to join or refrain from joining the union party to the agreement. In one of these this is extended to any union.

Twenty-seven plants with 16,759 workers are covered by agreements in which the employer gives assurance that employees will not be discriminated against because of their union membership or activities. In 24 plants with 16,251 workers, the union gives a similar undertaking with regard to employees who are not union members.

Other Non-Ferrous Metal Products

This group includes the manufacture of jewellery, the smelting of aluminum and the manufacture of aluminum products, as well as miscellaneous non-ferrous metal products. There are 47 plants, affecting 15,385 workers, in this group, of which 44 plants and 11,987 workers are under agreements in which the workers are represented by international or national unions. There is a variety of unions representing these workers, including the International Jewellery Workers' Union, the Syndicat National des Employés de l'Aluminium; the International Union of Aluminum Workers of America, the United Electrical, Radio and Machine Workers of America, and the International Association of Machinists.

Maintenance of union membership provisions are found in agreements for four plants, affecting 833 workers; union shop provisions

for three plants, affecting 221 workers and closed shop provisions for six plants, affecting 52 workers.

The maintenance of union membership clauses provide in one plant for an escape period, while in the other three no such period is allowed. In one of these this maintenance of membership is dependent on a majority of employees signing for the check-off.

It shall be a condition of employment with the company that all members of the union as of, and all those who shall subsequently become members shall remain members of the union during the duration of this contract. The union is to supply the company with a list of the members every three months.

Check-off—upon receipt of properly witnessed authorization from individual members of the union, the company agrees to deduct union dues from the first pay in each month for the duration of this contract and remit same promptly to the proper union officers. This maintenance of membership and check-off, however, shall not become operative unless over 50 per cent of the union members sign authorization cards.

Union shop conditions apply in three plants, affecting 221 workers, in two of which only new employees are concerned.

It shall be a condition of employment for employees in category (a) and (b) that:

- (a) all employees who are members of the union on who have not tendered their resignation from the union on or before, as it is hereby agreed they may should they choose so to do.
- (b) all persons mentioned in definition category (a) who enter the employ of the company after date of present agreement.

shall retain their membership in the union and be and become members thereof, the union hereby agreeing to admit all such persons to membership upon their paying the requisite dues, and they shall maintain their membership therein. Throughout the term of the present agreement, it being expressly agreed that no employee in category (a) and (b) entering the company's service for the first time other than shall be required to be or become a member of the union until the expiry of three months from the date of his entering the employ of the company. In the case of a dispute as to whether an employee is or is not a union member, the union agrees to give the management proof, satisfactory to the management, that the employee is a union member.

The other union shop agreement applies to both new and old employees.

All employees covered by this agreement must be members and maintain membership in provided that no employee entering the company's service for the first time other than shall be required to become a member of the union until the expiration of a period of three (3) months from the date of such entrance. It is agreed

that a representative of the union, employed in the plant, shall have permission at any time to check up accordingly.

The check-off is used under the terms of agreements for five plants, affecting 1,244 workers, in four of which authorization is required from each employee desiring the check-off from his wages. In the fourth agreement it applies automatically to each union member.

The company agrees to deduct from the earnings of each employee, one dollar (\$1) per month for union dues, and to transmit by cheque regularly each month to the financial secretary of the union, the full amount of the dues so collected.

With regard to the amount of union dues to be deducted, some check-off clauses do not specify any amount but simply state "union dues"; others, as in the clause quoted in the previous paragraph, set the exact amount to be deducted; while still others, as in the clause quoted below, state the maximum amount which may be deducted.

The company recognizes the right of the union to levy initiation fees, dues and assessments in accordance with the constitution and by-laws of the union.

The company, where so authorized and directed by an individual employee in writing upon the card form supplied on the date of the execution of this agreement, will deduct union dues not exceeding \$1.50 per month from the wages of such employee and remit the same monthly to the union. Employees who have not directed the company to discontinue dues deductions within the 10-day period preceding the expiration of this agreement shall be considered as having authorized the company to continue such deductions for a further period of one year.

In agreements for 16 plants, affecting 10,522 workers, it is definitely stated that the employer has exclusive rights as to hiring. Union officers, committeemen and/or stewards are to be given preference over other employees in case of lay-offs, under the terms of agreements for five plants, affecting 2,000 employees.

Members of committees recognized or established by this agreement and stewards will be retained by the company in the event of a lay-off affecting their department, so long as there is work in their respective departments which they are qualified and willing to do, notwithstanding their position on the seniority list. Exceptions to this rule will be discussed and arranged with the grievance committee.

It is specifically stated in agreements for five plants, affecting 1,248 workers, that employees are free to join or refrain from joining the union party to the agreement; in three of these cases this extends to any union. Clauses guaranteeing that the employer will exercise no discrimination against any employees be-

cause of their union membership or activities are part of agreements for 36 plants, affecting 14,755 workers; while the similar guarantee

on the part of the unions affecting non-union members is part of agreements for 13 plants, affecting 8,738 workers.

Non-Metallic Mineral Products

This industry group includes the manufacture of glass and glass products, petroleum products and a number of smaller sub-groups which are included in this study as "other non-metallic mineral products."

Glass and Glass Products

There are on file agreements covering 17 plants, affecting 2,016 workers, in all of which the workers are represented by unions affiliated with international central organizations. These unions include the United Automobile, Aircraft and Agricultural Implement Workers of America, the Glass Bottle Blowers Association of United States and Canada, the Brotherhood of Painters, Decorators and Paperhangers of America, and others.

A maintenance of membership clause is found in agreements for eight plants, affecting 129 employees. An escape period during which present employees might withdraw from membership is included.

An agreement for one plant, with 550 employees affected, has provision for the union shop.

One plant also, having 127 employees affected, has the check-off provision, which is operative on authorization from the individual employee who may revoke his authorization at any time.

In six of the plants of this industry, affecting 1,785 workers, the employer retains the exclusive right of hiring his employees. In one case, however, preference in hiring is to be accorded to union members "providing they are competent and satisfactory in the opinion of the manager".

In one other plant, union committeemen are to receive preference in case of lay-offs.

In one plant, with 85 employees, a provision gives employees the right to join or refrain from joining the union party to the agreement. In six plants, with 1,785 workers, the agreements provide that the employer will exercise no discrimination against any employee because of his union membership or activities, while in five plants, with 1,262 workers affected, the union makes the same undertaking with regard to non-members of the union.

Petroleum Products

In this group there are agreements on file for 44 plants, affecting 6,492 workers. Only six of these plants, with 511 employees, have

agreements with unions affiliated with national or international unions. These unions include the United Oil Workers of Canada and other unions, all affiliated with the Canadian Congress of Labour. In almost all of the other agreements the workers are represented by employees' associations or joint industrial councils.

One plant, with 68 employees, has provision for union shop applying only to new employees, with present employees obliged to maintain their membership. This same plant has the check-off provision, if this is passed by the majority of the union members.

Deductions from wages, except those required by law, shall be made only on written consent of the employee . . . The company agrees to deduct union dues from the employees' pay cheques provided that the necessary resolution to this effect is passed by a majority of the union members at a regularly constituted meeting of the union. Such deductions shall be made from the first pay cheque in each month, and shall cover dues payable by the employee for the previous month.

No preference to union members in case of hiring or to union officials in case of lay-offs is provided in any agreements in this industry group. In agreements for four plants with 477 workers the employers expressly retain exclusive rights as to hiring.

One agreement has a clause guaranteeing employees the right to join or refrain from joining the union party to the agreement.

Under the terms of 41 agreements, affecting 6,073 employees, the employer agrees that there will be no discrimination against any employee because of his union membership. Under agreements for four plants, affecting 332 workers, the union agrees not to discriminate against any employee because of his non-membership in the union.

Other Non-Metallic Mineral Products

This section includes the manufacture of asbestos products, brick and tile, lime, plaster and cement, monumental and building stone, pottery and china, and other products. There are agreements on file for 45 plants, affecting 4,704 workers, of which the agreements for 43 plants, affecting 4,581 workers, have national or international unions as the bargaining agency. Among the unions representing the workers are Syndicat National Catholique de l'Amiante (National Catholic Union of

Asbestos Workers) for asbestos products; United Brick and Clay Workers of America and Clay Products Workers' Union for brick and tile manufacturing; United Cement, Lime and Gypsum Workers' International Union for lime, plaster and cement manufacturing; United Granite Workers' Union for building and monumental stone; National Brotherhood of Operative Potters for pottery and china; the International Chemical Workers' Union, and the International Mine, Mill and Smelter Workers' Union for miscellaneous non-metallic mineral products.

Maintenance of union membership is provided in agreements for three plants, affecting 554 workers, in two of which an escape period is mentioned. Union shop clauses are found in agreements for 13 plants, affecting 1,141 workers, of which the agreements for nine plants and 750 workers apply the union shop condition only to new employees. Some of these do not specifically state that such employees must also maintain their membership. A qualification to the union shop provision sometimes is found, limiting the initiation fees for new employees required to join.

The union agrees to grant membership in the union to any new employees as herein defined, at an initiation fee of five (\$5) dollars.

The closed shop provision is found in an agreement covering eight shops, with 37 employees affected.

The check-off is provided in agreements for 15 plants, affecting 2,303 workers. In three cases the check-off applies to all union members automatically.

As long as this agreement is in force the employees hereby authorize the company and the company agrees to check off and forward to the financial secretary of the said union the fees and dues owing by the employees to the said union, which are established at this time as follows:—

Initiation fees
Local union dues

One of the agreements for automatic check-off is qualified by giving members who do not wish the check-off an opportunity to be exempted.

During the term of this agreement the company agrees to deduct union dues on a monthly basis from the wages of all union members whose names appear on the certified union list and from the wages of those employees whose names may be added to the list from time to time by union certification. It is further understood by both parties that union members who do not wish their union dues deducted from their wages must so notify the company and the union in writing between May 31, 1945, and June 14, 1945, both dates inclusive. From time to time, when other employees are certified by the union as being members, they must within 15 days of the receipt of such certification notify the company and the union in writing if they do not want their dues deducted.

In the other 12 agreements the check-off is operative only on authorization from the individual employees, and in four cases the authorization may definitely be revoked if the employee wishes.

In agreements for six plants, affecting 1,367 workers, the employer retains the exclusive right as to hiring. One agreement, affecting 70 employees, affords preference in hiring to union members.

When engaging men, the management will give preference to union members, if such are available and are capable of doing the work efficiently.

An agreement for one plant, with 385 employees affected, gives preference to union officials and committeemen in case of lay-offs.

Officers and the negotiating committee of the union shall, during their term of office in the union, head the seniority list. This will not apply to the filling of vacancies or promotions.

Under the agreement for one plant, with 385 employees affected, the employees are definitely given the right to join or refrain from joining the union party to the agreement. Under agreements for 23 plants, with 3,405 employees, the employers guarantee that no discrimination will be shown against any employee because of his union membership. Similarly, the union agrees to refrain from discrimination or coercion against employees because of their non-membership in agreements for 17 plants affecting 2,717 workers.

Chemical and Allied Products

This industry includes the manufacture of drugs and medicines, explosives and ammunition, paints and varnishes, soaps and toilet preparations, and other chemical products. There are agreements on file covering 54 plants and 9,268 workers. Of these, the workers are represented by unions affiliated with national or international central organizations in 29 plants, affecting 4,882 workers. Among

the unions representing the workers in this industry are the Canadian Pharmaceutical and Chemical Employees Union; federal unions affiliated with the American Federation of Labor; the Association of Employees of the Paint Industry (an organization representing employees in the paint industry in the Province of Quebec, and which is not affiliated with any central labour organization); the

International Chemical Workers' Union; the United Automobile, Aircraft and Agricultural Workers Union of America, and others.

Maintenance of union membership clauses are found in agreements covering three plants, affecting 487 workers, of which two such clauses provide an escape period. In one of these, this escape period occurs annually.

Any member of the union shall have the right to withdraw from membership in the union at any time between the 10th and 26th days of October in any year that this agreement is in force, by notice in writing mailed to the union and the company, and said withdrawal from the union will not prejudice the employee concerned in any way in the continuance of his employment by the company, provided that no member shall enjoy the right to withdraw from the said union under the terms of this subparagraph unless he is a member in good standing at the time of his notice of withdrawal.

Union shop conditions apply to nine plants, affecting 1,166 workers, of which eight affect only new employees; one has an escape period. One of these agreements, which applies to new employees, specifically exempts employees returning for reinstatement from service in the armed forces.

It is also understood and agreed that all new employees, except service men returning for reinstatement, upon becoming permanent employees of the company, must as a condition of continued employment, become members of the union and maintain

such membership for the term of this agreement.

There are no closed shop agreements.

The check-off is provided in agreements for 12 plants, affecting 1,721 workers. In three of these plants with 74 workers it applies automatically to all union members, and in the others on authorization by the individual employee. This authorization may be revoked by the employee under the terms of agreements for seven plants, with 1,315 workers.

The employer retains exclusive rights as to hiring new employees under agreements for 21 plants, affecting 3,249 workers. While retaining this right, one employer agrees to give preference to union members where possible.

When lay-offs are being made, preference in continued employment is to be given to union officials, committeemen and/or stewards under the terms of agreements covering five plants and 618 workers.

Employees are afforded the right to join or refrain from joining any union under agreements covering four plants and 1,122 workers, while this condition applies to the union party to the agreement in another seven plants, with 1,202 workers. The employer agrees to show no discrimination against employees because of their union membership or activities under agreements for 19 plants, affecting 4,184 workers, and the union agrees to refrain from exercising discrimination or coercion against non-members in 17 plants, affecting 4,054 workers.

Employment Policy

Employment and Development Works Planning

Meeting of I.L.O. International Development Works Committee

MEETING in Montreal during the week of January 28, the International Development Works Committee of the International Labour Organization studied methods of exchanging information on public works programs, and made recommendations on public investment in relation to full employment.

The meeting was attended by representatives of ten countries, including Belgium, Brazil, Canada, Colombia, Dominican Republic, Netherlands, Sweden, Switzerland, United Kingdom and the United States.

The Canadian representative was Group Captain B. F. Wood, Assistant to the Deputy Minister, Department of Labour, who was accompanied by two technical advisers from the Department of Reconstruction, Mr. H. W. Lea, Co-ordinator of Public Projects, and Dr. O. J. Firestone, Assistant to the Director General of Economic Research. Mr. Percy Bengough, President of the Trades and Labour Congress of Canada, and Mr. H. W. Macdonnell, legal secretary of the Canadian Manufacturers' Association, were also in attendance as labour and employer members of the Governing Body. Mr. Bengough was elected as one of the vice-chairmen of the Committee.

Supply of Information

The Committee drew up a new uniform plan for the supply of information by governments to the International Labour Office. Each country is to be asked to state the action it has taken in regard to the I.L.O. Public Works (National Planning) Recommendations of 1937 and 1944, and to provide the following information:

- (1) The total expenditure in each country on development works, classified, if possible, according to the type of body responsible for the works (central, regional and local Governments and publicly-owned undertaking not elsewhere included);
- (a) for the most recent 12-monthly period for which information on actual expenditure is available;
- (b) for the next following 12-monthly period (estimates);
- (c) for the current 12-monthly period if not covered by (b) above (estimate); and
- (d) any longer period for which plans have been prepared (estimate).

(2) Such information as may be available on the number of man-hours of work which has resulted or is expected to result on the site of the works.

(3) Such information as may be available on the methods adopted for financing the works, and more particularly on that proportion of the money which is raised by taxation and by borrowing, respectively.

(4) Copies of the documents, such as annual reports, technical studies, forms, handbooks and any other material which would be of use in understanding the methods adopted for the planning of development works.

On the suggestion of the Canadian delegation the Committee adopted the following definition:

For the purpose of this plan the term "public works (or development works)" means new works undertaken, and new plant, equipment and supplies purchased, by central, regional or local governments and publicly-owned undertakings not otherwise included, and maintenance and repair work related thereto.

The Committee also made recommendations to facilitate the flow of information concerning development works planning to countries which suffered during the war from enemy occupation.

Planning for Full Employment

The Committee decided to submit to the Governing Body the following list of points based, with modifications, on a report on public investment and full employment prepared by the International Labour Office:—

(1) In planning for full employment, Governments should aim at ensuring the maintenance of a high level of total expenditure, both private and public, and should in this connection plan public investment and its financing in such a way as to reduce industrial fluctuations as far as possible, as recommended by the Public Works (National Planning) Recommendations, 1937 and 1944, and to utilize resources with the utmost efficiency for the satisfaction of the needs of the people.

(2) (i) Government and other public authorities should time their public investment in such a way as to contribute to the maximum possible degree of stability in the major industries affected by it, such as, for example, the building and civil engineering industries and the mechanical engineering industry, in order to minimize the shifting of labour from industry to industry, and to permit continuous operation close to capacity. In selecting pro-

jects for inclusion in the public investment program, attention should be given to the various needs of different regions in each country concerned, both from the point of view of the development of the country and the maintenance of a high level of employment and income. Account should also be taken of the particular skills required for the carrying out of the public investment program to assure that the jobs provided match as far as possible the skills of the available labour supply.

(ii) As public services make a large contribution to national welfare and as it is desirable that public investment and public services be planned and budgeted on parallel lines, consideration should be given to the possibility (a) of regulating the timing and volume of variable public services such as, where appropriate, research and surveys, improvement of maps and records, handicraft projects, so as to conform to the timing of public investment; and (b) when unemployment threatens of enlarging the program of continuous public services, such as health and education, and of varying the methods of financing such services in a counter-cyclical manner.

3. In order to provide needed flexibility in the use of public investment as an instrument to maintain full employment, public investment programs should include an appropriate volume of projects that can be completed within a relatively short period as well as projects of longer duration.

4. In order to secure a clearer picture of their financial position, Governments should give careful consideration to the desirability of revising their accounting systems in such a way as to separate capital outlays from the current or operating budget, carrying over to the latter budget (a) interest and depreciation charges on capital items and (b) earnings of self-liquidating projects.

5. Agencies equipped with necessary legal and financial powers should be established at all levels of government to plan, execute and, when necessary, co-ordinate public investment projects in such a way as to make a maximum contribution to economic development and to the prevention of unemployment.

6. In order that plans may be put into operation with a minimum of delay when unemployment is increasing:

- (a) all stages of planning, including financial planning, completion of a five to ten year normal program, together with a reserve of additional useful projects, and preparation of working drawings and

specifications, should be undertaken in advance;

- (b) such plans and programs should be subject to continuous evaluation and revision in the light of changing conditions;
- (c) public authorities should be granted wide powers for the speedy acquisition of land at fair prices, including authority to acquire sites in advance;
- (d) the procedure for letting contracts should be simple and speedy.

7. Wherever adequate personnel for efficient advance planning is lacking, since such advance planning is essential to the whole policy of using development works to reduce unemployment, Governments should:

- (a) give every feasible encouragement to the acquisition of adequate staff by the government bodies concerned; and
- (b) make all possible use of professional services available on a consultant basis; and
- (c) where possible, to provide a pool of skilled personnel that can be made available to assist lower levels of government, with the preparation of plans and programs; and
- (d) provide assistance for the training of requisite technical staff.

8. Since a major portion of public investment is undertaken by regional and local governments, central governments should develop systems of grants in aid for the purposes of:

- (a) assisting regional and local governments with the advance preparation of plans and programs; and
- (b) encouraging regional and local governments to time their public investment in relation to the employment situation; and
- (c) providing financial aid to such of those governments as require assistance to undertake an adequate development works program.

9. To assist in the efficient planning of public investment, Governments should collect and process all relevant statistics such as the volume of on-site and off-site employment and, if possible, secondary employment, provided by projects of different sizes and types, distribution of total man-hours by months, labour and materials costs, etc., and should communicate the statistics to the International Labour Office. It would also be useful if Governments would, for the purpose of evaluation, submit the sources of the data and the methods of procedure adequate in compiling the data.

10. Particular importance is attached to the International co-ordination of National Public Investment policies.

Employment Policy in the United States

THE United States Congress has adopted an Act establishing a national employment policy, under the terms of which the Federal Government accepts responsibility for promoting "maximum employment, production and purchasing power."

The Act declares that it is "the continuing policy and responsibility" of the Federal Government

to co-ordinate and utilize all its plans, functions, and resources for the purpose of creat-

ing and maintaining, in a manner calculated to foster and promote free competitive enterprise and the general welfare, conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work, and to promote maximum employment, production, and purchasing power.

The Act requires the President to transmit to Congress annually an economic report setting forth the levels of employment, production

and purchasing power in the United States, comparing these levels with those needed to carry out the national policy, predicting trends, and outlining a program to effectuate the policy. The President may also submit supplementary reports from time to time.

The President is to be assisted by a three-man Council of Economic Advisers, whose function will be to study the economic situation, appraise the various programs and activities of the Federal Government in the light of their contribution or lack of contribution to the maintenance of employment, and

to develop and recommend to the President national economic policies to foster and promote free competitive enterprise, to avoid economic fluctuations or to diminish the effects thereof, and to maintain employment, production, and purchasing power.

The Council may set up advisory committees and consult with representatives of industry, agriculture, labour, consumers, and state and local governments.

The Act also provides for a joint committee of both Houses of Congress, which will consider

the President's report and make recommendations with respect to its provisions. The Committee will also make a continuing study of economic matters.

The Employment Act as passed differs considerably in phraseology from the bill which had originally been introduced by Senator James Murray (L.G., Feb. 1945, p. 179). The original bill had referred to "full" rather than to "maximum" employment, and had asserted the "right" of "all Americans able to work and seeking work" to "useful, remunerative, regular, and full-time employment." This section was deleted by Congress, as was also a provision specifically requiring an increase in federal expenditure whenever spending by private enterprise fell short of the level required to maintain full production and full employment.

However, the sponsor of the legislation, Senator Murray, speaking in the Senate on February 8, asserted that the bill as amended contained "all the essentials of a full employment bill," and that the original program was implicit in the language of the revised bill.

National Employment Service in New Zealand

LEGISLATION to create a National Employment Service was enacted in New Zealand in November, 1945.

The Employment Act states that the principal function of the Service "shall be to promote and maintain full employment at all times."

In particular, the new organization is required

- (a) to operate as a voluntary placement service, with emphasis on assisting people to find suitable employment, assisting persons who require occupational readjustment or training, and helping employers to secure labour or to provide jobs,
- (b) to make surveys and forecasts of employment trends and opportunities over all sections of work, and
- (c) "generally to do all things deemed necessary or expedient for the purpose of promoting and maintaining full employment, whether by facilitating the better location or availability of employment in relation to the labour available or otherwise howsoever."

The National Employment Service is to operate as a department of government, headed by a Minister of Employment, and administratively by a Director of Employment.

It replaces the National Service Department New Zealand's manpower during the war

years, and which in turn replaced the pre-war Placement Service.

An official statement outlining the purposes of the Act states that during the period of return from wartime to peacetime conditions almost 100,000 persons will have to be reabsorbed into industry. This problem is complicated by the presence of five successive annual waves of school leavers who have entered industry and by the fact that some 180,000 compulsory employment directions were issued during wartime while large numbers of other persons voluntarily changed their normal occupations. New Zealand's population, according to the census of 1941, was 1,631,414.

As against this, a number of industries need to build up their manpower, though some are dependent upon the resumption of supplies of materials.

An important requirement in New Zealand is for more skilled workers. "Full employment cannot be achieved by merely providing unskilled employment—in fact, the employment of unskilled labour is largely dependent upon the availability and wise utilization of skilled men, technicians, scientific and other specialist personnel. The availability of these men, which exercised compulsory powers over in turn depends upon forecast opportunities, training facilities and some organized means of securing appropriate appointments.

"With knowledge of employment trends and forecasts a national employment service is

placed in the position of being able, by various voluntary means, to ensure that the inflow of skilled and higher qualified personnel is neither excessive nor insufficient; to secure the diversion or retraining of men in accord with industrial needs; to encourage the location of new industry to best advantage and the suspension or release of work projects in accordance with the availability of labour. Where necessary it should be in a position to stimulate the provision of employment. Further, such a service should be in a position to facilitate the re-entry into full employment of persons who, because of disablement or other reasons can no longer follow their usual employment. It should also be able to assist persons in the process of attaining adult status in industry and in this respect must be closely linked with vocational guidance services. Finally it should

be in a position, if necessary, to actually provide labour on a voluntary basis to meet any special community requirements which cannot otherwise be adequately met."

In addition to its main functions, the Department is empowered under the Act to establish and operate hostels and other establishments for workers.

Further, it may "provide a home-aid service, by making the services of workers employed in the Department available for domestic and other work in cases of emergency and in other special circumstances."

New Zealand's program for providing employment is complemented by its social security legislation, reference to which was made in the January issue of the *LABOUR GAZETTE* (p. 20).

Postwar Employment Trends in Britain

WITH the end of the war in Europe, modifications in Great Britain's manpower policy were put into effect. First, the practice of withdrawing men and women from industry for the Armed Forces and auxiliary services was relaxed at once. Secondly, demobilization was commenced; and thirdly, plans for the conversion of wartime to peacetime production were set in motion and accelerated as much as possible.

It is pointed out in *The Ministry of Labour Gazette* for January, that "the first two developments naturally tended to increase the number of men and women available for employment in industry," although this was delayed in some measure by the extension of demobilization leave. The effect of the third development was to release large numbers of munitions workers and others employed in wartime production. This made necessary a shifting of workers to industries and services which had suffered reductions during the war, although a considerable proportion remained in their existing employment for the production of goods for export and for civilian consumption. Others, especially women in wartime employment, retired from industrial activities. The net effect up to the end of November (1945), was to reduce the numbers in industrial employment by about 539,000, the number of men showing a net increase of 78,000 and the number of women a net decrease of 617,000.

At the beginning of 1945, the total estimated manpower in industrial employment was about 1½ million. Of that number, roughly 10,055,000 were men between the ages of 14 and 64 and 6,445,000 were women in

the age group 14 to 59. By the end of May the number of men had decreased by 80,000 and the number of women by 120,000. The number of men remained substantially the same during the succeeding three months, but in October and November there was a net increase of about 153,000, bringing the total at the end of the latter month to 10,133,000. Among women, the rate of decrease was fairly rapid in October, but there was some slackening in November, but the decrease in the six months beginning with the end of May was 497,000, about 100,000 fewer than had been expected.

Where Employment Shifts Occurred

The reduction in employment naturally occurred in the manufacturing industries, especially the metals and chemicals groups, including shipbuilding and repairing, engineering, aircraft, motors and vehicles, and explosives. During the first eleven months of 1945 the numbers in the munitions group decreased by 1,052,000. In the same period other manufacturing industries engaged in the production of goods for civilian needs increased the number of their workers by about 176,000.

In the basic industries, such as agriculture and mining and in Government services, public utilities and transport, there was a slight increase of about 19,000. Building, civil engineering, the distributive trades, professional services, catering, entertainment, and laundries showed a combined increase of about 318,000.

Records of Employment Exchanges

During the years prior to the outbreak of war the average numbers of insured persons registered at Employment Exchanges in the United Kingdom as unemployed ranged from 1½ millions in 1937 and 1939 to over 2½ millions in 1931 and 1932. From 1940 onwards the number fell rapidly to an average of less than 80,000 in 1944.

In the early part of 1945 the number of persons registered as unemployed remained at a low level and consisted almost entirely

of persons who were either changing from one job to another, or owing to age, physical disability, or other reasons, were suitable only for light work. There were too, some married women or others not available for transfer to employment in other districts. The vast re-distribution of manpower, however, which followed the cessation of the war in Europe in May necessarily resulted in some increase in unemployment. By the middle of December there were 285,000 insured persons registered as unemployed.

Canadian Arsenal Limited

THE Honourable C. D. Howe, Minister of Reconstruction, recently announced the formation of a Crown Company, Canadian Arsenal Limited, for the purpose of providing rapid mobilization of Canada's industrial capacity should the nation be called upon to supply armed forces by the Security Council of the United Nations Organization.

Working under the direction of the Department of Reconstruction and Supply the company will be an equal adjunct to the three armed services, and integrate its defence preparations with theirs. Its primary task will be to keep the weapons of the "hand-picked skeleton forces of the armed services of Canada", in top-notch condition and maintain Government and private factories and key personnel in a state of readiness.

Mr. Howe stated that by constant liaison with civilian plants producing automobiles, refrigerators, ships, aircraft, railway equipment, clothing and a host of other items necessary in modern warfare, Canadian Arsenal Limited will facilitate a much swifter conversion to war production than was possible in the early days of the past war.

In addition, it is the intention of Canadian Arsenal Limited to maintain plants producing defence items such as explosives, guns, small arms, etc., which are of no value to civilian consumers.

As a "fourth service", Canadian Arsenal Limited will keep abreast of the latest military equipment; and proceed to develop certain weapons of its own design although, owing to the relatively small armed forces to be main-

tained in Canada, the major portion of war equipment must necessarily conform to designs of the United Nations Organization. It will be equipped to produce pilot models of any Canadian-designed weapons and to prepare manufacturing specifications.

The formation of Canadian Arsenal Limited, was the result of over a year's intensive investigation by the Joint Arsenal Planning Board. It was established in September, 1945, and its president is Colonel Malcolm P. Jolly, who during the war headed Small Arms Limited, the Crown Company which produced large quantities of rifles and other small arms. The other directors and officers of the company are Brigadier A. Theriault, vice-president, R. M. P. Hamilton, J. G. Notman, N. P. Peterson, E. T. Sterne, and R. Flavelle, secretary-treasurer.

The Company's head office is situated in Ottawa. It embodies the gun plant at Longueuil, the Small Arms Limited plant at Long Branch, Ontario, the Dominion Arsenal at Quebec City, the Lindsay Arsenal at Lindsay, Ontario, the Cherrier shell-filling plant of Defence Industries Limited, St. Paul l'Ermite, Quebec, and a portion of the Research Enterprises Limited plant at Leaside, Ontario. A number of chemical and explosives plants built and operated during the war will be maintained by the company in a standby condition. Similarly, a supply of machine-tools and dies will be maintained in an inventory reserve.

The Minister stated that title in the Crown Company is vested in the people of Canada, through its ownership by the Crown.

Wage-Price Policy in the United States

A REVISED wage-price policy was announced by the President of the United States on February 14.

The policy laid down after V-J day had been to maintain the price level, with certain minor exceptions, but to return the determination of wage rates to free collective bargaining within the framework of the price level (L.G., Nov., 1945, p. 1624). Employers were authorized to grant such wage increases as did not affect prices without obtaining approval from the National War Labour Board.

In announcing the policy, President Truman had asserted his belief that wage adjustments were necessary in order to cushion the decline in take-home pay resulting from loss of overtime and other factors, and that industry could afford substantial wage increases without price increases. Industry, however, would not be asked to take unreasonable chances, and if after six months an industry which had granted a wage increase was unable to operate at a fair profit, the Office of Price Administration would take the wage increase into consideration in passing on an application for a price increase.

In announcing the changes in this policy, the President declared that he had hoped that as a result of free collective bargaining on wage questions the reconversion program would proceed vigorously and in an orderly manner. However collective bargaining had broken down in many important situations, several major strikes were in progress, and vitally needed production was lagging.

"It is imperative," he declared, "that production in great volume be accomplished. We face real difficulties. Many workers have found their weekly pay greatly reduced. Many companies, squeezed between costs and prices, are not in a position to wait through a six months' period as heretofore required before seeking price adjustments. This is especially true in some instances where there is a complete change from war production to civilian production.

"It is likewise true in the case of small companies which lack the ample reserves of many large corporations. Many small businesses were at a disadvantage during the war. They must not be so in peace."

Revised Policy

The object of the revised policy, which is put into effect by executive order, is "to permit wage increases within certain limits and to permit any industry placed in a hardship position by an approved increase to seek price adjustments without waiting until the end of a six months' test period as previously required."

The National Wage Stabilization Board (which has replaced the National War Labour Board) is authorized to approve any wage increases which it finds to be consistent with the "general pattern" established in the industry or local labour market since August 18, 1945. Where there is no such general pattern, provision is made for the approval of increases found necessary to eliminate gross inequities as between related industries, plants, or job classifications, or to correct disparities between the increase in wage or salary rates since January, 1941, and the increase in the cost of living between that date and September, 1945.

(According to *The New York Times*, the "general pattern" of wage increases since V-J day will be taken to mean increases of 15 to 20 per cent, although the President did not mention figures.)

The making of a wage increase without the prior approval of the Board is permitted, but constitutes a waiver of any right of the employer to use such an increase as a basis for seeking a price increase. The Stabilization Director will determine certain classes of cases, however, in which a wage increase may be granted without prior approval of the Board and without any waiver of right to ask for price relief. These cases will include all those in which the increase will clearly not have an unstabilizing effect.

An industry is defined as "in hardship," and thus eligible to ask for immediate price relief, if, after taking the entire amount of a wage or salary increase into consideration, a Price Administrator finds that the industry's current ceiling prices will leave it in an overall loss position. The price relief to be granted will be enough to enable it to operate at the same rate of profit as in the peacetime base period applicable to the industry—in most cases 1936-1939.

To support his program, the President urged Congress to extend the stabilization statutes without amendment and with all possible speed, "so that there may be no question in anyone's mind concerning the determination of the Congress to see the fight against inflation through to the finish." He also asked Congress to extend the subsidy program for another year, and to adopt legislation establishing price controls over housing.

In conclusion he urged the American people to support the national program against inflation, and called upon both management and labour to proceed with production. "Production," he said, "is our salvation. Production is the basis of high wages and profits and high standards of living for us all. Production will do away with the necessity for Government controls."

Index Numbers of Wage Rates in Canada, 1939 to 1944

THE accompanying table contains index numbers showing the changes in wage rates in various industries for the period 1939 to 1944. It is a continuation of the new series first published in Report No. 26 on "Wages and Hours of Labour in Canada" issued by the Department as a supplement to the LABOUR GAZETTE for June, 1945.

The table contains figures showing the changes in wage rates by individual industries as well as for the main groups of industries for the period 1939 to 1944. A table showing the index for the main groups only for the period 1901 to 1944 was published in the LABOUR GAZETTE for October, 1945 (p. 1424).

Under the Wartime Wages Control Order, 1943, effective February 15, 1944, the cost of living bonus was incorporated into basic wage rates in the data reported by employers to the Department in 1944. The bonus was also included in the wage rates from which the indexes for the previous years were calculated.

A revision has been made in the index for steam railways for the years 1939 to 1944. For the years 1941 to 1943 this index was calculated from average hourly earnings by occupations as published by the Dominion Bureau of Statistics in the Reports on Statistics of Steam Railways. These averages included overtime earnings. The revision was made in order to have this index on the same basis as those for other industries, that is, to reflect changes in wage rates in this industry in place of changes in earnings.

The general index covering all industries was 137.5 in 1944 compared with 132.8 in 1943, an average increase of 3.5 per cent. This compares with an increase of between 8 and 9 per cent in each of the last three preceding years and of 3.9 per cent in 1940 over 1939. The wartime increase in wage rates from 1939 to 1944 was 37.5 per cent.

Report No. 27 covering the year 1944 is expected to be available in a few weeks' time.

INDEX NUMBERS OF WAGE RATES IN CANADA, BY INDUSTRY, 1940-1944

(Rates in 1939=100)

Labour Management Production Committees Plan to Combat Absenteeism

A PROGRAM to be used by labour management production committees in combating absenteeism has been outlined by the Industrial Production Co-operation Board in a recent issue of its news bulletin.

The bulletin states that "the way to tackle the absentee problem is to track down the basic causes and apply remedies, in preventable cases, at the source."

The program is outlined below:—

1. DEFINE ABSENTEEISM

Absenteeism is defined as the failure of workers to report on the job when they are scheduled to work. An employee is to be considered scheduled to work when the employer has work available and the employee is aware of it, and when the employer has no reason to expect, well in advance, that the employee will not be available at the specified time.

2. DETERMINE POLICY

More satisfactory results can be expected if labour and management view absenteeism as a common problem and if labour, through the labour-management production committees, participates in the formulation and application of the rules for dealing with absentees. Together, labour and management may determine excusable absences, procedures for obtaining leave of absence, and rules for reporting back to work when leave is not granted.

3. KEEP PROPER RECORDS

Adequate records are essential to locate and control absenteeism, the bulletin continues. They should provide a continuing record of absence rates, broken down into significant classifications; reveal causes of absence and help control it.

4. EMPHASIZE ATTENDANCE INCENTIVES

Sound industrial relations policies emphasize the positive rather than the negative approach. The publishing of penalties, such as posting names of absentees causes resentment. Awards for regular attendance stimulate co-operation and boost morale.

5. APPRAISE MANAGEMENT'S RESPONSIBILITY

Management must evaluate its personnel policies and techniques to determine to what extent they contribute, if at all, to employee discontent.

6. SEARCH FOR CAUSES AND CURES

Committee action can discover the real causes of absenteeism and can often suggest practical and effective remedies. Some of the fields in which this committee action has proven helpful have been in production plan-

ning, hours of work, industrial accidents and diseases, nutrition, and in remedying factory conditions that result in indifference, boredom and fatigue.

Factory conditions should impress workers that their attendance is important. Insufficient and irregular work, particularly without explanation, may cause workers to feel their absence is not serious. Where there are real or fancied grievances, and bad feeling results, workers will sometimes deliberately come late or stay away. Some committees use "gripe boxes" where unsigned notes may be left calling attention to unsatisfactory conditions.

It has been shown that rest periods, nutritious snacks, and music reduce fatigue. Committees have found that recreational activities contribute toward better morale and health and greater interest in the job. Perhaps the most effective way to stimulate interest is to tell the worker about the importance of his job and to show him how his job is related to the final product.

Physical discomfort and cases of "nerves" often interfere with regular attendance. Consideration should be given to preventing as far as practical excessive fatigue, monotony, and tension in very noisy plants. Quite often the workers can pass on to the committee practical suggestions that would improve or remove unsatisfactory conditions. There may be simple, inexpensive improvements that everyone else has overlooked. Study of absentee records show that more people are away from work on Mondays and Saturdays, also the day after pay day or after a holiday. Committee action can reduce such absences by explaining to the workers the purpose of production schedules and the importance of regular attendance.

Production schedules are best explained through the labour-management production committee because workers are naturally more receptive to explanations given by fellow workers. If the employees recognize the importance of regular attendance, group pressure may be brought to bear on those who violate what has become accepted as the "social code of behaviour" for the working group.

Labour management production committees have co-operated with local agencies and services in order to help remove conditions that contribute to lost time. They have arranged for improved transportation service and been instrumental in arranging hours for shopping, visiting the doctor and dentist that are more convenient for the employees.

Social Insurance in Great Britain

National Scheme of Protection Against Loss of Income

A National Insurance Bill was introduced in the British House of Commons on January 24, and passed second reading on February 11. Aimed at establishing freedom from want by providing for a unified and comprehensive scheme of social insurance, the Bill embodies with certain modifications the proposals of the White Paper, *Social Insurance*, issued in September, 1944 (L.G., 1944, p. 1313), which in turn were based on the Report of Sir William Beveridge (L.G., 1943, p. 46).

The following benefits are to be provided:—

Sickness benefit;

Unemployment benefit;

Maternity benefits (maternity grant, maternity allowance, and attendance allowance);

Widows' benefits (widow's allowance, widowed mother's allowance, and widow's pension);

Guardian's allowance (to be paid in respect of orphans);

Retirement pension;

Death grant.

In addition to these benefits, provision has already been made for family allowances (L.G., 1945, p. 812), and is being made under a separate bill for industrial accident insurance. National Assistance will be paid under a separate scheme to those who are ineligible for benefits and are in need; and there will also be a scheme of health services.

The main benefit and contribution rates, which are somewhat higher than those proposed in the White Paper, are set out in tables 1 and 2.

The Bill establishes a minimum income of 42s. for a couple living together, and 26s. for a single adult. These rates cover the fundamental risks of unemployment, sickness, old age, and widowhood. For an adult dependent the rate is 16s. and for the first child in a family, 7s. 6d. (Provision is made for the first child only, since the Family Allowances Act provides for subsequent children. The family allowance rate is 5s. a week for each child except the first.)

Contributions

Title to benefits will depend on payment of prescribed numbers of weekly contributions. Contributions will be credited for weeks of unemployment and sickness, and

in certain other contingencies. There will be power to except from liability to pay contributions persons who are— (a) unemployed or incapable of work, or (b) drawing pensions or other benefits, or (c) under full-time education or unpaid apprenticeship, and to credit such persons with contributions. Persons whose total income is less than £75 a year will also be able to claim exemption from paying contributions, but this will involve loss of benefit rights.

Generally, contributions will be paid by means of stamps on an insurance card. Responsibility for paying contributions will be primarily on the employer, who will deduct the worker's share of the contribution from the worker's wage.

Sickness and Unemployment Benefit

An employed person will have a waiting period of three days at the beginning of a spell of sickness or unemployment, but he will be paid benefit for these three days if he is sick or unemployed on 12 days during a period of 13 weeks. On a subsequent claim for benefit, he will not have to serve a new waiting period, unless more than 13 weeks have elapsed since the end of his last spell of sickness or unemployment. Odd days of sickness or unemployment may count for benefit, but only where two or more of them fall within a group of six consecutive days.

A self-employed person will receive no benefit for the first 24 days of sickness.

There is no time limit on sickness benefit. Unemployment benefit may be drawn for 180 days, together with additional days of benefit assessed on the worker's record of contributions and benefit. In limiting the duration of benefit, the Government took the view that only short-term unemployment should be borne by the Insurance Fund, and that the responsibility for long-term unemployment should be a direct state responsibility under the National Assistance scheme.

Maternity Benefits

For a confinement, a woman will receive a maternity grant of £4, on her husband's insurance or on her own.

For a woman who ordinarily follows a gainful occupation, there will be in addition a maternity allowance of 36s. a week for 13

weeks beginning about six weeks before her confinement is expected, provided that she abstains from work. For other women there will be instead an attendance allowance of £1 a week for four weeks in addition to the maternity grant.

Widows' Benefits

A widow will receive an allowance of 36s. a week for 13 weeks. If she has been left

with a child of school age she will thereafter receive a widowed mother's allowance at the rate of 33s. 6d. If she is over 40 when this allowance ceases, and 10 years have then elapsed since the date of her marriage, she will qualify for a widow's pension at the rate of 26s. a week. This pension will also be paid to a widow who has reached 50 when her husband dies, or to widows incapable of self-support.

TABLE 1—COMPARATIVE STATEMENT OF MAIN BENEFIT RATES

	New Proposals	White Paper Proposals	Present Scheme
<i>Weekly Rates—</i>			
Sickness.....	26s.	24s. (20s. after 3 years)	18s. (10s. 6d. after 6 months).
Unemployment.....	26s.	24s.	24s.
Retirement.....	26s.	20s.	10s. (Old Age Pensions).
The rates paid in columns 2 and 3 relate to single adults. Lower rates will in general be paid to married women. In column 4 the sickness and unemployment rates are those for a single man; there are separate rates for married and single women.			
<i>Increases for Dependents—</i>			
Wife or other adult.....	16s.	16s.	None on sickness benefit. 16s. on unemployment benefit. 10s. O.A.P. for wife over 60.
(Wife only in the case of retirement pension.)			
First child.....	7s. 6d.	5s.	None on sickness benefit. 5s. on unemployment benefit. None on O.A.P.
<i>Widows and Orphans—</i>			
Widow's Allowance (first 13 weeks)...	36s.	36s.	Widow's pension of 10s. with allowance of 5s. for first child.
Widowed Mother's Allowance.....	33s. 6d.	29s.	
Widow's Pension.....	26s.	20s.	7s. 6d. (Orphan's Pension).
Guardian's Allowance.....	12s.	12s.	
<i>Maternity—</i>			
Maternity Allowance (for 13 weeks)....	36s.	36s.	None.
Attendance Allowance (for 4 weeks)....	20s.	20s.	None.
<i>Grants—</i>			
Maternity Grant.....	£4	£4	£2 (with a further £2 if a wife is also insured).
Death Grant (Adults).....	£20	£20	None.

TABLE 2—MAIN CONTRIBUTION RATES

	Employed Person	Employer of Employed Person	Self-employed Person	Non-employed Person
	s. d.	s. d.	s. d.	s. d.
Men over 18.....	4 7	3 10	5 9	4 8
Women over 18.....	3 7	3 0	4 10	3 8
Boys under 18.....	2 8	2 3	3 4	2 9
Girls under 18.....	2 2	1 9	2 11	2 3

These rates exclude contributions under the industrial injuries insurance scheme, but include contributions to the new health service.

Men aged 70 and over and women aged 65 and over will pay no contributions. Men aged 65 to 70 and women aged 60 to 65 will pay contributions only if they are working and have not retired from regular employment. These provisions will not affect the employer's liability to pay contributions.

Guardian's Allowances

Where the parents (including step-parents) of a child are dead, and one at least of them was insured under the new scheme, any one who has the child in his family will qualify for a guardian's allowance at the rate of 12s. a week.

Retirement Pensions

Retirement pension age will be 65 for a man and 60 for a woman. The rate will be 26s. a week for single persons and 42s. for married couples (except that if the wife is insured in her own right she may draw the full 26s. as well as her husband's).

If an insured person postpones retirement, his pension will be increased by 1s. for every 25 weekly contributions he pays in the five years after pension age.

At the age of 70 for men and 65 for women the pension will become payable whether the person continues to work or not. Where a man aged 65 to 70 or a woman aged 60 to 65 does any work after having qualified for a retirement pension, and earns over 20s. in any week, the pension will be reduced by 1s. for every 1s. the pensioner earns above 20s.

Death Grant

A death grant ranging from £6 for a child under 3 to £20 for an adult will be paid for the expenses connected with the death of an insured person or with the death of his wife, or child, or widow. Where the insured person is a woman, a grant will be paid for the death of her husband or child.

Married Women

A married woman who is a non-employed person will be excepted from insurance, unless, being already insured, she prefers to remain insured, e.g., in order to qualify for a pension in her own right.

A married woman who is employed or self-employed will be excepted from liability to pay contributions unless she prefers to pay, e.g., in order to maintain her right to sickness benefit.

Variation of Rates of Benefit and Contribution

An important provision in the Bill is that that Minister of National Insurance will review the benefit rates every five years with particular regard to any changes in the expenditure needed for the preservation of health and working capacity.

The Bill's estimates of the cost of unemployment insurance are based—like those in the Beveridge Report and the White Paper

—on an assumption that an average of 8½ per cent of employed persons will be out of work at any time. This will be another of the matters to be reviewed at the end of five years.

It is planned that contribution rates will be raised when employment in the country is high and lowered when unemployment increases. This is in accordance with the Government's policy for maintaining purchasing power and a high level of employment (L.G., 1944, p. 944).

Administration

The Act will be administered by the Ministry of National Insurance, which will have regional and local offices throughout the country. Provision is made for appeals from decisions of insurance officers to local tribunals and ultimately to a national insurance commissioner appointed by the Crown whose decision is final. There will be national and local advisory committees. Reciprocal arrangements may be made with the Dominions and other countries.

Application of Scheme

The Act is expected to come into full force in 1948.

In the meantime the existing schemes of unemployment and health insurance, old age pensions, family allowances, and assistance measures will be continued. The retirement scheme is to be brought into effect as soon as possible.

Cost of Scheme

The total cost of the insurance scheme for the first year of operation is estimated at £540,000,000. Speaking in the House of Commons on February 7, the Prime Minister, Rt. Hon. Clement R. Attlee, dealt with the question of whether the country could afford this expenditure as follows:—

"If the answer is 'No' it really means that the sum total of the goods produced and the services rendered by our people is not sufficient to provide for all our people at all times the very modest standard of life represented by the sums set out in the bill. I cannot believe that our national productivity is so low, our willingness to work so feeble, that we must admit to the world that the masses of our people must be condemned to penury. Where I do agree is that we can only afford it if we are prepared to utilize to the full our resources in labour and materials, our skill and scientific inventions, and our power of organization."

Safety for Dock Workers

“SAFETY in Dock Work” is the title of a monograph published by the International Labour Office to give effect to a Recommendation adopted by the Second Inter-Governmental Conference on Reciprocal Arrangements respecting Safety in the Loading and Unloading of Ships, which was held in London in July, 1935. The first draft of the technical part of the monograph was prepared before the war at the request of the Office, by Mr. C. Morzer Bruyns, Chief Port Labour Inspector of Rotterdam. Delay in publication was due to the outbreak of war, and the difficulties of translation and final revision under war conditions.

The study is divided into two parts, Part I dealing with the technical measures necessary to be taken to ensure safety in dock work and Part II containing the text of legislation for the prevention of accidents in dock work, which is in force in Australia, Chile, Germany, Great Britain, Portugal and Sweden. Included, too, is the text of two voluntary American Safety Codes, one prepared and recommended by the Maritime Association of the Port of New York and the other, the Pacific Coast Marine Safety Code, which was sponsored by the Accident Prevention Bureau of the Pacific Coast Marine Associations. Two International Labour Conventions designed to protect dockers are also given: No. 32 concerning the Protection against Accidents of Workers Employed in the Loading and Unloading of Ships, 1932, and No. 27 concerning the Marking of the Weight on Heavy Packages Transported by Vessels, 1929.

Both these Conventions are in force in Canada, the Weight-Marking Convention by the Canada Shipping Act, 1934, proclaimed in force on August 1, 1936. This Convention was ratified by the Government of Canada on June 30, 1938 (L.G. 1938, p. 972). The docks regulations were made on December 14, 1938, under the Canada Shipping Act, and amended on February 19, 1943. A resolution for approval of the Dockers' Convention was adopted by the Senate on December 10, 1945, and by the House of Commons on December 18, 1945 (L.G., 1946, p. 205). Formal ratification of this Convention is expected shortly.

Part I of the I.L.O. monograph contains chapters on (1) the general measure of protection for hoisting and transport machinery used in loading and unloading ships, including sections on the fencing of dangerous parts, safe means of access, protection against the

accidental descent of loads, and safety factors, (2) hoisting machines and gear on board; (3) cranes ashore and on pontoons and lighters; (4) slings; (5) masts and derricks; (6) derrick spans; (7) blocks; (8) chains, rings, hooks, shackles, swivels; (9) the influence of quality, lay, splices and number of strands on the strength of manila and steel wire ropes; (10) testing and examination of lifting machines and gear; (11) means of access to hold, to ship, to deck, to another ship; (12) hatches and hatchways, etc.; and (13) loading and unloading cargo.

Inspection and supervision are dealt with in another chapter. It is suggested that the port inspection service should be organized under the department responsible for the protection of industrial workers throughout the country; that it should be responsible for the protection of all workers employed on ships in so far as their work is not connected with the fitting out or navigation of the vessel; that it should be autonomous and entitled to consult and call on the services of shipping registration companies, technical associations, semi-official institutions, committees and so on; that

in the larger ports the inspectorate should be under the orders of an official with a sufficient technical and scientific training to enable him to deal with any problem that may arise. He must have a thorough knowledge of all the national and foreign laws and treaties affecting his work and must himself be competent to draft legislation and orders. He must be tactful in his dealings with employers and workers, whether individually or through their associations, and he must have a thorough knowledge of working conditions in his own district and elsewhere.

He must be fully acquainted with the economic problems with which the inspection service is increasingly being brought into contact. He must be able to speak for the service on technical subjects, labour questions, etc., at committee meetings and to represent his country at international conferences. He must be able to maintain the necessary relations with foreign authorities and other parties concerned.

In addition to his native language, he should have a sound knowledge of the languages chiefly used in international dealings.

The chief inspector in a large seaport must have at his disposal not only the necessary administrative staff but also a sufficient number of inspectors to ensure efficiency.

Some of these inspectors must be capable of calculating, in so far as this is possible without complicated mathematics, the strength and stresses of hoisting gear and other appliances on land and on board ship. They must be able to judge sketch plans—a very important matter in the case of new structures—

and must have a wide knowledge of materials. In short, their scientific training must be sufficient to enable them to carry out all the duties entrusted to them and to submit detailed reports on their work, labour conditions and any special subjects on which they are consulted . . .

The remaining inspectors must have sufficient technical knowledge to understand all the problems connected with the loading and unloading of ships and must, like the others, be able to get on with the workers and their foremen. They should be specially responsible for supervising hours of work and must be able to draft simple reports . . .

When small ports are situated near larger ones, the former can be supervised by the inspection service of the latter. Otherwise, or when this arrangement is considered undesirable, the inspection duties in the small port, which will occupy only a very few hours daily, may be carried out by an official of some other service who is resident there and is acquainted with shipping matters. This can be considered a subsidiary appoint-

ment for which some slight extra remuneration may be paid. In this capacity the official will be attached to the inspection service of a larger seaport . . .

Another interesting chapter discusses briefly the diseases and toxic and other harmful substances to which dock workers are exposed. The diseases include anthrax from handling hides, wool, hair, etc.; diseases of the respiratory organs usually caused by dust from ore, fertilizers, etc.; inflammation of the membranes of nose and throat from dust; skin burns and eye diseases from handling pitch and similar substances; skin injuries, eye burns from corrosives such as soda ash, acetic acid, some fertilizers, etc. The toxic and harmful substances include phosphoretted hydrogen, carbon monoxide, carbon dioxide, gasoline and benzol vapours, paint, certain vegetable products, and lead.

Security for Seafarers

“SOCIAL Security for Seafarers” is the title of a publication issued by the International Labour Office in the interest of reaching international agreement on minimum standards for seafarers with respect to workmen's compensation, unemployment insurance, old-age pensions, etc., of equality of treatment for national and foreign seafarers residing in the country of the ship on which they sail, and of more effective protection for non-resident seafarers.

The study contains a comparative analysis of the law concerning such matters in Australia, Belgium, Chile, France, Netherlands, Norway, Sweden, the United Kingdom and in the United States, monographs on seafarers' social security services in those countries, a discussion of the need for a seafarers' social security charter, and a model scheme of seafarers' social security.

The model scheme has been drafted by the International Labour Office as a basis for further study by the maritime countries. Among the proposals is one for the establishment of a seafarers' insurance fund in each maritime country to be administered by a body which would include representatives of the shipowners' and seafarers' organizations, of the state's medical care services and its income security scheme, and another for the establishment of an international administrative organization.

The proposed code, if adhered to by all maritime countries, would entitle the seafarer,

wherever resident and of any nationality or race, both in and outside his country of residence, to medical care, compensation, maintenance and repatriation in case of illness, and his dependents to compensation in case of his death occurring during the voyage. All other risks would be covered by the social security schemes of his country of residence and his rights would be maintained during his service on a foreign ship by contributions levied by the seafarers' insurance fund of the ship's country and remitted to the social security funds of his country of residence. A seafarer left ashore outside his country of residence and outside the ship's country would be cared for by the country where he was landed at the expense of the seafarers' insurance fund of the ship's country. If no social security services existed in the country where he was left ashore, an agency of the international association would provide the necessary care.

A seafarer residing in a country not adhering to the seafarers' code and not having a social security scheme for its people would, if sailing on a ship of a country applying the code, receive medical care and be entitled to compensation, maintenance and repatriation in respect of illness, and his dependents compensation for death occurring during the voyage, wherever landed, both abroad and at home. He would not, however, be protected against other risks in his country of residence.

Rehabilitation

Procedure for Payment of Veterans' Out-of-Work Benefits Changed

UNDER an arrangement between the Department of Veterans Affairs and the Department of Labour, effective February 1, 1946, offices of the Unemployment Insurance Commission are authorized to pay out-of-work benefits to ex-service persons. The change in payment procedure, designed to speed up financial assistance to unemployed veterans, will allow persons who can qualify for out-of-work benefits under Order-in-Council P.C. 5210, to receive cash payment through the offices of the Commission.

Prior to this, payments of out-of-work benefits were made only through the Rehabilitation Centres of the Department of Veterans Affairs. Veterans living in centres where there were no offices or sub-offices of this department have been forwarding their applications by mail to the nearest Department of Veterans Affairs' office.

The procedure for payment under the new arrangement differs according to whether the veteran lives in a small or a large centre. In larger cities those qualifying for assistance are given a voucher which may be cashed on the premises. In smaller centres a warrant is issued which is negotiable at any chartered bank.

Applications for assistance will still be made to the District Rehabilitation Board of the Department of Veterans Affairs and approval must be obtained from the Board before payment can be made.

This new policy has been adopted in an attempt to cut down the time lag that has occurred between the date a veteran makes application and the date he receives payment. Under the former system it was necessary for D.V.A. to obtain, from the U.I.C. office concerned, information that employment was not available for veterans making application. In out-of-town cases further time was lost because cheques had to be mailed. By using the facilities of the Unemployment Insurance Commission it will be possible to make payments weekly instead of every two weeks.

The out-of-work benefits amount to \$50.00 a month for single men and \$70.00 for married men, with additional allowances for children.

Veterans registered with the National Employment Service as seeking employment and unable to find work become eligible for this assistance 39 days subsequent to discharge. They may receive assistance for a period equal to their length of service but not in any case to exceed 52 weeks. Application for out-of-work benefits must be made within 18 months of the date of discharge.

Veterans Awaiting Training and Education

It was announced recently by the Minister of Veterans Affairs, Hon. Ian A. Mackenzie, that veterans who have been required to postpone their vocational or university education due to lack of training facilities may now draw out-of-work allowances without reducing their periods of training assistance.

"Formerly, the period of waiting for training was so short that these veterans' interim income was not an urgent concern, but it is now estimated that the waiting period in many cases will extend to three or four months or longer," the Minister explained. "Previously, payment of out-of-work allowances to such veterans would have resulted in diminishing the allowance for training available to them under the Veterans' Rehabilitation Act and so defeating the rehabilitation purposes of the Act."

Order-in-Council P.C. 254, dated February 7, 1946, provides that any veteran who has applied and been approved for either vocational or university training in Canada under the Veterans' Rehabilitation Act, shall be entitled to receive, without affecting his training rights, an allowance for himself and his dependents equivalent to the out-of-work allowance. The out-of-work allowance amounts to \$50 monthly for a single veteran, with corresponding increases for dependents. A married man with two children receives \$94 monthly.

A heavy flow of applicants for vocational and university education has caused unprecedented congestion of training facilities. However, the delays, while unavoidable, will be adjusted as quickly as possible, the Minister asserted.

Trend of Veterans' Employment Preferences

It was announced recently by Hon. Ian Mackenzie, Minister of Veterans Affairs, that pre-discharge interviews of 33,153 service men and 1,769 service women at release centres across Canada during December, showed that 33 per cent of the men and 15 per cent of the women expect reinstatement in their pre-war civilian jobs.

Four per cent of the men and 15 per cent of the women planned to return to their own businesses—but the latter figure includes married women taking their places as homemakers.

Reinstatement of Ex-Service Personnel

Canadian employers are continuing to give full co-operation in reinstating ex-service personnel who wish to return to their employ, it was stated recently by Hon. Humphrey Mitchell, Minister of Labour.

"Evidence reaching the Department through reinstatement officers of the National Employment Service indicates that employers in a great many cases are exceeding the compulsory requirements of the 'Reinstatement in Civil Employment Act,'" the Minister said. "Many employers are doing much better for their employees who are veterans, than just giving back the old job."

The Labour Minister said that since August 1, 1945, an effort has been made to secure comprehensive statistics on the reinstatement in former employment of discharged members of the Forces. Between August 1 and November 30, the National Employment Service has followed through on 51,469 cases of discharges regarded as eligible for reinstatement at the time of discharge. Out of this number, 47,968—or 93 per cent—were reinstated with pre-enlistment employers. "These figures indicate," Mr. Mitchell pointed out, "the high percentage of men and women from the Armed Services who are anxious to return to their old employment."

Another 61,960 persons discharged during this period were also considered eligible for reinstatement, but facts are not yet available on them. This is because most of these were discharged in October and November, and the three months' legal period in which to apply for reinstatement had not elapsed when the

Twenty-one per cent of the men and 18 per cent of the women were reported as having told counsellors that they would be seeking employment, and 14 per cent of the men and 15 per cent of the women stated that new jobs were available for them.

Eleven per cent of the men and 18 per cent of the women intended to apply for vocational training, while seven and ten per cent respectively, desired university training. Smaller numbers had in mind Veterans' Land Act assistance for full-time farming, or on small holdings.

figures were made up. Reinstatement officers believe, however, that when the figures are available they will show a similar trend of return to the old job.

Of the 51,469 referred to as finally dealt with, 2,469 did not apply for reinstatement. These would include discharges who have undertaken training or education, as well as those who have decided to take up new work instead of going back to previous employment. Out of the same total only 1,032 applied and were not reinstated. On investigation by the Employment Service it was found that these actually had no claim under the Act. To insure that no man entitled to reinstatement is denied his job, the Employment Service investigates carefully every complaint received, whether through non-reinstatement or complaints over conditions under which a veteran has returned to a job arising over misunderstanding on the part of the employer or employee in connection with the provisions of the Act, and in the great majority of cases a satisfactory solution has been found.

Out of a total of 267,472 persons discharged from the Forces between August 1 and November 30, the pre-discharge interviews indicated that probably 113,429 were eligible for reinstatement. This latter total would not include veterans who were working at the time of enlistment, but for any reason—chiefly either because of temporary employment or because they were replacing others eligible for reinstatement—are not entitled to return to their pre-enlistment employment.

Co-operation of National Employment Service with Rehabilitation Committees

Hon. Humphrey Mitchell, Minister of Labour, recently announced that steps have been taken to tie in more closely the relations of the National Employment Service with the Citizens' Rehabilitation Committees across Canada.

Following consultations with Hon. Ian Mackenzie, Minister of Veterans Affairs, direc-

tions were sent to the Rehabilitation Committees, informing them that the officials of the National Employment Service would be available at all times for the purpose of assisting the committees in their work, and that officers from the National Employment Service would be available to serve on the committees as members. In most cases local

office managers have now been named to committees, and where this course has not been followed a close liaison has been established.

"Both the Citizens' Rehabilitation Committees and the National Employment Offices are making strenuous efforts to assist ex-service men and women back to civilian employment," the Labour Minister said. "It is important that the activities of these two institutions should be co-ordinated as closely as possible. Through the addition of National Employment Office Managers to the committees a much closer tie-in of the efforts of those directly responsible for the employment placement of veterans will be accomplished."

The Minister of Labour has communicated with the Chairman of each of the 700 local committees across Canada expressing his appreciation of the fine work that the committees have been doing. He pointed out the importance of assisting veterans in every way possible in becoming re-established in civil life. He re-emphasized the need for the fullest co-operation between the Departments of Labour and Veterans Affairs and suggested that wherever possible, the manager of the local Employment offices be made a member of the local committee. In that way, he felt that both the work of the committees and the local Employment offices might be made still more efficient in the satisfactory placement of veterans.

Management of C.I.O. Unions

THE Congress of Industrial Organizations recently made public a comparative survey of the manner in which its thirty-six affiliated unions in the United States conduct their affairs and account for their finances.

It recorded top salaries of officers as being \$6,000 a year or less for twenty-five of the unions. Phillip Murray, who receives no remuneration as president of the C.I.O., receives the highest salary, \$20,000 a year, as president of the United Steel Workers. Three heads of large unions receive more than \$10,000; all others receive less.

The majority of C.I.O. members paid initiation fees of less than \$5.00, with the general range running between \$2.00 and \$10.00. Twenty-seven unions levied no special assessments and \$2.00 was the highest reported.

Monthly dues were reported to be \$1.00 to \$1.50 for most workers, of which about half is retained by the local and the remainder goes to the international union. It declared that every union accounts to its membership for all money spent and thirty-two publish detailed financial reports available to all interested public parties as well as to the members.

Certified public accountants audit the books regularly in 31 cases; officers or committees especially elected do the auditing in the remainder, the survey reported.

According to the report, all unions except one specifically prohibit membership discrimination because of race, colour, sex, or creed, and that one delegates authority on this question to its locals.

Supreme legislative authority is invested in the annual or biennial international convention, whose sessions are generally open to the public. Proceedings are published in full by 31 unions, and the remaining five publish summaries or condensations.

All C.I.O. unions have provisions which preclude arbitrary expulsion by extending the right to a hearing to every member. A further right of appeal to the international convention is provided by 31 unions before expulsion becomes final.

In summing up its findings the report states: "This study does not prove that all C.I.O. unions are perfect,.....but the survey does demonstrate that C.I.O. unions have provided a democratic framework, in a constitution which insures basic democratic rights for all members."

Decisions of National War Labour Board

DURING the month of February the National War Labour Board issued decisions in the following cases:—

Beattie Cadillac Chevrolet Oldsmobile Limited, Toronto, Ont.

Lever Brothers Limited, Winnipeg, Man.

Lever Brothers Limited, Vancouver, B.C.

Metropolitan-Goulet Company, Limited, Montreal, P.Q., and Maurice Bourassa.

Lord Nelson Hotel Company, Limited and Hotel and Restaurant Employees' International Alliance and Bartenders' International League of America, Local 662.

McKinnon Industries Limited and United Automobile Workers (C.I.O.), Local 199.

Naugatuck Chemicals (Division of Dominion Rubber Company, Limited), Elmira, Ont., and Workers of Naugatuck Chemicals.

Drewrys Brewery, Regina, Sask., Sicks' Regina Brewery Limited, and International Union of Brewery, Flour, Cereal and Soft Drink Workers of America.

Drewrys Limited, Saskatoon, Sask., and International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America.

Fowler's Canadian Company Limited, Hamilton, Ont., and United Packinghouse Workers of America, Local 188.

Mueller Limited, Sarnia, Ont.

Re: Beattie Cadillac Chevrolet Oldsmobile Limited, Toronto, Ont.

Reasons for Decision

The Company applied to the Regional War Labour Board for Ontario for permission to increase wage rates for its employees in several occupational classifications. For some of the classifications the Regional Board approved the increases requested and for others the requests were approved in part only. With leave of the Regional Board the Company appeals from those parts of the decision which concern the General Parts Manager, Field Parts Manager, Service Salesmen and Service Control Operator.

The submissions on appeal indicate clearly that the General Parts Manager is required to assume duties and responsibilities of the nature which, for the purpose of Wartime Wages Control Order 1943, would place him above the rank of foreman. This Board, however, has jurisdiction over his case, to the extent of authorizing a rate of \$250 per month. We are of the opinion that sufficient grounds have been advanced in support of a salary adjustment for the incumbent in this position, at least to the limit within our jurisdiction. We authorize the Company to increase the rate to \$250 per month for the General Parts Manager. Upon receipt of such rate he will then be subject to Wartime Salaries Order P.C. 1549.

We have not been able to detect any error on the part of the Regional Board in its decision concerning the Field Parts Manager except in respect of the ruling on the incentive bonus. The Company contends that the incentive bonus is inappropriate for this classification. With that contention we are in agreement and propose to allow it.

The Company states that it promotes its more senior mechanics to the occupational classification of service salesmen. To induce its mechanics to become service salesmen the Company should be in position to offer greater remuneration. This cannot be done under the Regional Board's decision. We are prepared to authorize an increase of 10 cents per hour over the rate approved by the Regional Board for this classification. The increased rates plus the commission will provide a sufficient differential.

The Control Operator is virtually an Assistant Shop Foreman. To provide a proper wage differential for this classification over the rate for the highest paid classification being supervised the rate requested by the Company should be approved.

The appeal is allowed to the extent indicated above and there will be a Finding and Direction accordingly.

February 4, 1946.

Re: Lever Brothers Limited, Winnipeg, Man.

Reasons for Decision

With leave of the Regional War Labour Board for Manitoba the Company appeals from a decision of that Board dated October 12, 1945. In and by that decision the Regional Board declined to approve a general adjustment in wage rates based on a job evaluation plan for the employees engaged in the Company's Winnipeg plant, but authorized the Company to increase wage rates for some occupational classifications listed in the application to the Regional Board.

The Company contends that the Regional Board's decision does not properly express the relationships which the Company and the employees have agreed should exist between the rates for the various factory jobs. In fact, it is stated, its adoption would create more anomalies than it would correct.

The Company for itself as well as on behalf of the employees concerned, asserts that the Regional Board's decision is not acceptable. Because the decision is an "authorization" and not a "direction", no useful purpose would be

served in confirming it. Accordingly the decision will be revoked.

Recently this Board dealt with an appeal by the Company from a decision of the Ontario Regional War Labour Board. In that case the Ontario Board declined to permit the Company to put into effect in its Toronto plant, a job evaluation plan which is based on the same formula as that used in this case. This Board dismissed the appeal in the Ontario case. In that case this Board came to the conclusion that the plan, if approved, would have a disturbing effect upon the whole wage structure in the Toronto area.

It seems appropriate to note here that the the Winnipeg plant, would have an effect upon the whole wage structure in the Winnipeg area which would be much more disturbing than that which this Board visualized for the Toronto area. The plan is not one which is acceptable within the limitations of Wartime Wages Control Order, 1943.

There will be a Finding and Direction giving formal effect to the foregoing.

February 8, 1946.

Re: Lever Brothers Limited, Vancouver, B.C.

Reasons for Decision

The Company applied to the Regional War Labour Board for British Columbia for permission to adjust the wage rates of factory and office employees engaged in its Vancouver establishment. The proposed adjustment of the wage rates was based on a job evaluation survey which followed the same pattern as those surveys which were made in the Toronto and Winnipeg plants of the Company. The Regional Board rejected the application and subsequently granted leave to appeal.

It seems appropriate to note here that the Regional Boards for Ontario and Manitoba rejected similar applications which the Company made to those Boards. The Company appealed from the decisions of the Ontario and Manitoba Boards and this Board dismissed the appeals.

The British Columbia Regional Board had before it substantially the same material as

that filed with this Board and, indeed, as that filed with the Ontario and Manitoba Boards. The conclusion reached in the case by the British Columbia Board was "that the proposed increases were entirely out of line with the established rates for similar occupational classifications in comparable industries in British Columbia." This conclusion corresponds with those arrived at by the other Regional Boards in the Company's cases before the other Boards.

The Company did not support its appeal with material which would entitle one to plead that the Regional Board proceeded on any wrong principle in deciding the case as it did. We are bound to conclude, therefore, that the Regional Board did not err in its appreciation of the facts or in its application of the law to the facts.

The appeal is dismissed. There will be a Finding and Direction giving.

February 8, 1946.

Re: Metropolitan-Goulet Company, Limited, Montreal, P.Q., and Maurice Bourassa

Reasons for Decision

Maurice Bourassa, a former employee of the Company filed with the Regional War Labour Board for Quebec, a complaint to the effect that for the period December 1, 1944, to June 9, 1945, the Company had failed to pay him

wages at the rate in effect for the occupational classification of welder (solderer) which he says he filled during that period. The Regional Board issued its decision concerning the complaint which decision is to the effect that the Company should pay Bourassa at the welder's

rate *unless* the company can prove that he was not doing welder's work during that period.

The Company applied to the Regional Board for leave to appeal and the Regional Board refused such leave. The matter now comes before us by way of an application for leave to appeal and an appeal from the decision.

This is another case where an attempt has been made to have the Regional Board act as a collection agency. We have on previous occasions tried to make it clear that war labour boards were not to act as collectors. They have no power to act in such capacity.

Notwithstanding the efforts put forward to have the Regional Board find that the Company owed this former employee a sum certain, a perusal of the Regional Board's decision justifies the statement that he has failed in those efforts. As indicated above the Company

is relieved of liability, if there is any liability, if it can prove that Bourassa was not doing welder's work during the period in question. The Regional Board's decision does not indicate how or to whom the Company is to provide the proof.

What the Regional Board might have done was to determine the occupational classification in which the employee should have been classified during the said period. This the Regional Board did not do, no doubt, because of the lack of evidence on the point.

It seems to us that the Regional Board's decision in its present form, serves no useful purpose and we think it should be vacated. Accordingly we allow the application for leave to appeal and the appeal. There will be a Finding and Direction revoking the Regional Board's decision.

February 14, 1946.

Re: Lord Nelson Hotel Company, Limited and Hotel and Restaurant Employees' International Alliance and Bartenders' International League of America, Local 662

Reasons for Decision

The Union applied to the Nova Scotia Regional War Labour Board for an order directing the company to increase wage rates for all employees who are subject to Wartime Wages Control Order, 1943. The Regional Board dismissed the application on the ground that the Company lacked ability to pay the increased rates as requested. The Regional Board also dismissed the Union's application for leave to appeal. The Union then applied to this Board for leave to appeal and at the same time entered its appeal.

The Regional Board's grounds as above stated are technically correct. We agree that the evidence shows that the employer is financially unable to pay *all* of the increases requested. In our view, however, the evidence on the point does not go as far as saying that no increases could be assumed.

Having taken that view and having realized that the relations existing between the management and the Union are extremely good, we concluded that it would be proper to grant

leave to appeal and to suggest to the parties that they negotiate further to the end that, at least, some of the inequalities in wage rates might be remedied.

The parties negotiated and have presented this Board with a new rate schedule with which both sides are in agreement. We are now asked to approve the schedule. This we are prepared to do.

It seems appropriate at this time to indicate that we appreciate the help given this Board by the President of the company and the International Vice-President of the Union. Without that help we, undoubtedly, would have experienced much difficulty in producing a satisfactory solution for the problems involved. The results obtained in this case through collective bargaining between people who are prepared to be fair, one with the other, should be an object lesson for others.

There will be a Finding and Direction which will give formal approval to the new schedule of wage rates.

February 11, 1946.

Re: McKinnon Industries Limited and United Automobile Workers (CIO), Local 199

Reasons for Decision

With leave of the Ontario Regional War Labour Board the Union appeals from a decision of that Board dated November 30, 1945. In and by that decision the Regional Board confirmed the base rate of 63c an hour for the company's "Harden and Draw Furnace

Operators" who tend automatically controlled furnaces.

The Union contends on this appeal that the Regional Board's decision has the effect of reducing wage rates and that the Regional Board did not have jurisdiction to produce such effect in its decision.

It would appear that in 1937 the Company maintained a certain Harden and Draw Furnace which was not equipped with pyrometers and other electrical apparatus designed to automatically control and regulate the heat of the furnace. The operators of this furnace were required to judge and regulate the temperature by frequently opening and looking into the furnace pit. The added duties and arduous working conditions connected with the operation of this furnace made it apparent to the employer that a special occupational classification should be established for such operation. This was done and for that classification a special rate was established which was and still is 5c an hour above the rate for operators of automatically controlled furnaces.

It is our view that the employer has two distinct occupational classifications—one handling automatically controlled furnaces and the other for the operation of furnaces not so controlled. Our view is supported by the definition of "occupational classification" as the same is defined in the Wartime Wages Control Order, 1943. In order that two employees may be regarded as being in the same occupational classification there must not only be similarity in the performance of work or duties but also in the exercise of a like type and degree of skill and accuracy. The submissions herein make it quite apparent that the operators of the non-controlled furnace are required to exercise a higher degree of skill in operating it than is exercised by operators of the automatically controlled furnaces.

We do not propose to disturb the rate established by the employer for the "Harden and Draw Furnace Operators" who tend furnaces which are not equipped with pyrometers or other electrical apparatus designed to automatically control the heat of the furnace. By the same token we do not propose to disturb the employer's established rate for the "Harden and Draw Furnace Operators" who tend an automatically controlled furnace. The 63c rate in effect for the latter classification shall be maintained by the Company.

It appears that at one time the Company had three employees engaged in the operation of the furnace which lacked the automatic controls above referred to. Later on the furnace was equipped with pyrometers and other automatic controls. Notwithstanding the changeover in equipment the three said employees continued to receive the rate for the classification created for the operation of the furnace without controls. It is quite obvious that the classification of the three said employees was changed at the time when the furnace was modernized. The continuation of the payment of the higher rate was irregular but the Company says that such irregularity was the result of an oversight on its part. It seems strange to us that the Company did not detect the irregularity long before it did. We are not surprised to find that the irregularity resulted in grievances made by the other sixty operators.

The appeal is dismissed. There will be a Finding and Direction accordingly.

February 21, 1946.

Re: Naugatuck Chemicals (Division of Dominion Rubber Co., Ltd.), Elmira, Ont., and Workers of Naugatuck Chemicals

Reasons for Decision

With leave of the Regional War Labour Board for Ontario the Company and the Union join in an appeal from a decision of that Board which rejected a joint application for permission to establish occupational classifications more specific than the current few generic ones in the plant and to establish single rates and ranges of rates, as the case may be, for the new occupational classifications.

On April 27, 1944, the Regional Board, in pursuance of a Union application, directed the Company to establish certain rates and ranges of rates for a few occupational classifications, some of which bore rather vague titles. The Company and the Union found that the direction restricted the operation of

the Company's job rating system. The Union asked the Company to re-rate the several operations in the plant. This was done apparently to the satisfaction of both parties because they joined in the application which led to the Regional Board's decision in this case.

We accept the occupational titles proposed. We have analyzed the proposed wage rates and have come to the conclusion that they can be and are justified under Wartime Wages Control Order, 1943.

The appeal is allowed. There will be a Finding and Direction in which the approved occupational titles and wage rates will be set forth.

February 21, 1946.

Re: Drewrys Brewery, Regina, Sask., Sicks' Regina Brewery Limited, and International Union of Brewery, Flour, Cereal and Soft Drink Workers of America

Reasons for Decision

The Union in two applications, one concurred in by Drewrys, the other by Sicks', asked the Regional War Labour Board for Saskatchewan for permission to change working conditions in the two breweries and to increase the wage rates of the employees in those breweries who are represented by the Union. On July 6, 1945, the Regional Board issued decisions in each case. The Regional Board declined to approve some of the changes requested in the working conditions and, except in the case of the classification "beginner", rejected the applications for wage increases.

By letter dated October 16, 1945, the Union requested the Regional Board to reconsider the July decisions. The Regional Board reviewed the decisions and on October 25, 1945, the Chief Executive Officer of the Board advised the Union that "The additional information submitted does not warrant the reopening of the case and I am directed to say that the above mentioned decision (July 6, 1945) is sustained."

The Union did not seek leave to appeal but on November 9, 1945, filed with this Board its brief on appeal. For the purposes of this decision we shall treat the material filed as an application for leave to appeal.

The foregoing recital of the steps taken in this case indicates that the first point to be determined is whether the parties have any right to be before this Board. The right of appeal is created by Section 11 of Wartime Wages Control Order 1943. The decisions which the Union would have us vary are those of July 6, 1945. Under Section 11 the request for leave to appeal from those decisions should have been made to the Regional Board within thirty days of the an-

nouncement of the decisions or to the National Board within sixty days. Even the request for reconsideration was so long delayed as to make it impossible for us to treat it as an application for leave. In the circumstances we have no alternative but to deny the application for leave.

Before reaching the conclusion above stated we reviewed the wage rate structure in effect at the two breweries. During the course of the review reference was made to the Regional Board's files. The reference satisfies us that the Regional Board made a thorough and painstaking study of the cases in question and that it made the correct findings of the fact. There is nothing in the material before us which would show that the Regional Board committed any error in making those findings.

The Union claims that a certain brewery in another Saskatchewan city pays higher rates than those in effect in the breweries in question. Even supposing this is so, we cannot regard this one instance as being sufficient to disturb the generally prevailing levels. The Union also says that certain breweries in another province pay higher wages than those in effect in the Regina breweries. If it was necessary to check the wage rates paid in other provinces, and we say that in this case it is not only unnecessary but improper, there would be as much justification in introducing in evidence the wage rates paid in yet other provinces where to our knowledge the levels are lower.

Notwithstanding that our decision on the right of appeal actually disposes of these cases we deem it advisable to indicate what our views would have been on the merits had the appeal been properly launched.

Leave to appeal is refused.

February 20, 1946.

Re: Drewrys Limited, Saskatoon, Sask., and International Union of United Brewery, Flour, Cereal and Soft Drink Workers of America

Reasons for Decision

The reasons given by us in denying leave to appeal in appeal case *re* Regina Breweries apply with equal force and effect in this case, and we are, therefore, obliged to deny the application for leave to appeal in this case.

If the Union made a new application to the Regional Board it is possible that the Board might under Wartime Wages Control Order 1943 presently in effect, see fit to grant some adjustments in wage rates for the Company's First Cellarman. First Warehouse-

man, Brewhouse Helper, Operating Engineer—Third Class, Mechanic, Cooper, Carpenter and Painter and Watchman. In saying this we do not presume to dictate or even suggest to the Regional Board what it should do in the event that the further application is made. The Regional Board must deal with such application on its merits. In any event we cannot assume original jurisdiction in this case which is precisely what we would be doing if we attempted to make any adjustments in the rates for the above named classifications.

February 20, 1946.

Re: Fowler's Canadian Company Limited, Hamilton, Ont., and United Packinghouse Workers of America, Local 188

Reasons for Decision

This is an appeal by the Union from a decision of the Regional War Labour Board for Ontario dated November 1, 1945, which confirmed, on reconsideration, a decision of that Board issued on January 31, 1945. Leave to appeal was granted by the Regional Board.

The issue involved in this appeal concerns a request by the Union for an order directing the Company to pay double time for work performed on Sundays and statutory holidays.

In August, 1942, the Company and the Union entered into a collective agreement. In Article 3, Section 3, of that Agreement provision is made for the payment of overtime after nine hours in any one day, or 54 hours in any one week. Section 4 of the article provides that double the regular rate shall be paid for work performed on Sundays and holidays except where the regular shift falls on Sundays or holidays.

In 1944 the Company reduced its work-week to 48 hours and the Regional Board's decision of January 31, 1945, provides for premium rates for work performed in excess of 48 hours. In the same decision the Regional Board declined the Union's application concerning double time for work performed on Sundays and statutory holidays but directed the Company "to pay time and one-half for all work performed on Sundays where Sunday is not part of the standard work week of the employee and in the case of an employee where Sunday is part of the standard work week for work performed on the seventh consecutive

day." The Board further directed the Company to pay time and one-half for all work performed on six statutory holidays.

The Company contends that the double time provision as contained in the said collective agreement was contingent upon the establishment of a standard work-week of 54 hours and that the application of the Union to reduce the standard work-week to 48 hours had the effect of wiping out the provision contained in Section 4, Article 3, of that Agreement.

It is our view that Section 4 of Article 3 is not dependent upon Section 3 of the said Article and we are obliged to interpret that agreement in its written form and not otherwise.

We think that the conditions prevailing in other establishments in the industry should apply here and the appeal should be allowed for such purpose.

The Finding and Direction in this case will provide, amongst other things, that:

- (a) double the regular rate shall be paid to an employee for work performed by him on Sunday except where that employee's regular work falls on Sunday, but if the employee's regular day off falls on a week day he shall be paid double his regular rate if he works on such "day off";
- (b) in respect of six statutory holidays now declared by the law of Canada to be of general observance throughout Canada, hourly rated employees shall be entitled to receive double their regular rate for hours worked on any such day.

February 21, 1946.

Re: Mueller Limited, Sarnia, Ont.

Reasons for Decision

This is an application for leave to appeal and appeal by the Company from a decision of the Regional War Labour Board for Ontario dated November 7, 1945. In and by that decision the Regional Board approved an increase for the Company's cost clerk, but rejected the application insofar as it sought approval to establish ranges of monthly rates for certain foremen and others of supervisory rank.

From the submissions it would appear that the Company never had ranges for the single employee classifications concerned in this appeal, and we are unable to find in the submissions any sound reasons why we should now authorize the Company to establish them.

The Company's wage schedule has undergone several revisions since August, 1939. In the course of those revisions employees in the

occupational classifications concerned, in this case, have received substantial wage increases as have the hourly rated employees. The adjustments in wage rates for the hourly rated employees in most of the Company's departments have been greater than those for their respective foreman or supervisors. Indeed, it now appears that some hourly rated employees actually receive more wages than do their foremen.

The last-mentioned condition, no doubt, has been and, unless remedied, will continue to be a ground for grievance by the foreman directly concerned. In view of the foregoing we find it necessary to authorize the Company to adjust the monthly wage rates for its foreman in the following departments, namely: Brass Machine, Automatic Rod Machine, Inspection and Packing, Plumbing Assembly and Core Room, and for its Assistant Foreman, Polish-

ing and Plating and for the Assistant to the Production Foreman.

The Company has not pointed to any error in the Regional Board's decision in respect of the other occupational classifications mentioned in the appeal and we do not propose to disturb the decision as it concerns them.

Notwithstanding that there are proper grounds for the adjustments which we propose, such adjustments may have an unsettling

effect among the supervisory staff. It is for the Company to determine whether the adjustments will have such effect. We propose to authorize; we shall not direct.

The application for leave to appeal is allowed and the appeal is allowed to the extent above indicated. Finding and Direction accordingly.

February 25, 1946.

Economic Conditions in Canada, 1945

THE Dominion Bureau of Statistics has issued a bulletin on the economic conditions in Canada during 1945. It states that, "the average of six factors indicating the trend of economic conditions averaged higher in 1945 than in any other year."

Bank deposits, consisting of Dominion and Provincial balances and notice and demand deposits, rose to a higher level than in any previous year.

Speculation continued the upward trend of recent years; common stock indices averaged nearly 19 per cent over the preceding year and speculative trading was at the highest level that has been reached in a considerable time. Wholesale prices displayed a moderate gain; bond prices were considerably stronger, but the bond yield index receded about two per cent during the period.

Productive operations, because of a marked reduction in output of war supplies were at a lower level than in 1944. However the index standing of 212.5 indicates a peak level for any year except 1943 and 1944.

The marked decline in war expenditures by the Dominion Government was counterbalanced to a certain extent by increases in other lines. Preparations are being made for a marked increase in the activity of the construction industry. Contracts awarded rose 40 per cent to \$409,000,000 in 1945. Building permits in principal municipalities showed a slightly greater percentage increase, the total in 1945 having been \$136,000,000. The index of employment in construction, however, showed a gain of only about six per cent, indicating that many contracts have been placed without very much work having been performed upon them. The value of residential building under new contracts totalling almost one-half of all new business, suggests that at the present time the main limiting factor in house construction is the availability of materials and labour.

The production of steel ingots, indicative of the production of munitions and producers' durables, recorded a recession of 4.7 per cent, the total in 1945 having been 2,881,000 short tons. The recession in pig iron production was of slightly lesser proportions.

The export trade creates a strong demand for Canadian products. Total exports, excluding gold, amounted to \$3,267,000,000 during 1945, a decline of 6.2 per cent from the preceding year. Imports, at \$1,586,000,000, showed a decline of 9.8 per cent. The active balance of trade receded from \$1,724,000,000 to \$1,682,000,000. Net exports of non-monetary gold, being additional to the balance of trade, were \$96,000,000 in 1945 against \$109,700,000 in the preceding year, a decline of 12.5 per cent.

Retail trade was considerably greater in 1945 than in the preceding year. The average of the index during the first eleven months rose from 166.7 to 180.9. The percentage gain in wholesale sales was somewhat greater than in retail distribution, the index averaging 206.2 in the first eleven months of 1945 against 188.6 in the same period of the preceding year. Country general store sales averaged 6.5 per cent greater during the calendar year 1945 than in the preceding year, with all provinces sharing in the advance. The index of department store sales rose 11 per cent over the average for 1944.

The ordinary expenditures of the Dominion Government rose from \$528,000,000 in the first nine months of the fiscal year ended March 31, 1945 to \$827,000,000 in the same period of the present fiscal year. The war expenditures, on the other hand, dropped from \$2,442,000,000 to \$1,471,000,000, a decline of no less than 39.7 per cent. The increase in the United Nations Mutual Aid expenditures was 12.4 per cent, the total during the elapsed part of the present fiscal year having been \$759,000,000.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles dealing with proceedings under the National War-time Labour Relations Regulations and with proceedings under the Conciliation and Labour Act and other legislation.

Under the War-time Labour Relations Regulations, P.C. 1003, the Government has extended its jurisdiction over employer-employee relations which are normally exclusively within the provincial field to the extent considered necessary to cover adequately employers and employees in industries "essential to the efficient prosecution of the war", but without attempting to include other industry which has not a direct bearing on war production. In so far as these latter industries are concerned, each province can make its own decision as to whether or not they shall be brought under the Regulations.

Agreements have been made under the Regulations between the Dominion and every province except Alberta and Prince Edward

Island providing for the setting up of provincial agencies for the administration of the Regulations.

The work of the War-time Labour Relations Board (National) is here described in two separate articles. The first deals with applications made by unions for certification and their disposition by the Board; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also carried on by the Industrial Relations Branch of the Department of Labour under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned; and under P.C. 4020.

Applications for Certification under the War-time Labour Relations Regulations

The War-time Labour Relations Board (National) met for three days during the month of February. During this period the Board received one application, held four hearings, issued four certificates designating bargaining representatives, ordered two representation votes and rendered decisions in three appeal cases.

Certificates Issued

Four applications for the certification of bargaining representatives were approved by the Board and certificates issued, as below:—

1. Messrs. J. M. Smith, Harry Sipes and J. S. Thompson and the *Canadian Seamen's Union, Pacific Coast District*, for the unlicensed personnel employed on vessels operated by *W. F. Gibson and Sons, Vancouver, B.C.* Masters, mates and engineers were excluded from the bargaining unit.*

2. Messrs. J. M. Smith, Harry Sipes and J. S. Thompson and the *Canadian Seamen's Union, Pacific Coast District*, for the unlicensed personnel employed on vessels operated by the *Badwater Towing Company Limited, Vancouver, B.C.* Master, mates and engineers were excluded from the bargaining unit.*

3. Messrs. J. L. Pateman and A. Mose and the *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees*, for the clerk accountants, shop timekeepers, clerk timekeepers, comptometer operators, typists, station payroll clerks, assistant station payroll clerks, trainmen's timekeepers, yardmen's timekeepers, enginemen's timekeepers, distribution clerks, Mechanical Department timekeepers, junior clerks, accountant clerks, and general clerks employed by the *Canadian Pacific Railway Company* in

* Following investigation of the application.

its District Accountant's Office, *Moose Jaw, Saskatchewan*.**

4. Mr. W. J. Edwards and the *Order of Railway Conductors* for the road train conductors employed by the *Temiskaming and Northern Ontario Railway, North Bay, Ontario*. The Board had previously rejected an application for certification of bargaining representatives submitted by the Brotherhood of Railroad Trainmen for the same employees following a representation vote in which it failed to obtain the support of a majority of the employees affected (*LABOUR GAZETTE*, February, 1946, p. 175).**

Representation Votes Ordered

1. *Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 1374, and Western Canadian Greyhound Lines Limited, Calgary, Alberta* (L.G., December, 1945, p. 1789). Mr. H. S. Johnstone, Industrial Relations Officer, Winnipeg, Manitoba, was appointed by the Board to act as Returning Officer in a vote of the bus drivers, garage men, ticket clerks, express and baggage handlers of the *Western Canadian Greyhound Lines Limited, Calgary, Alberta*.

2. *The Brotherhood of Railroad Trainmen and the Canadian Pacific Railway Company, Montreal, Quebec* (L.G., January, 1946, p. 39). Mr. C. W. Rump, Industrial Relations Officer, Ottawa, Ontario, was authorized by the Board to act as Returning Officer in a vote of the sleeping and parlour car conductors and parlour car attendants employed by the *Canadian Pacific Railway Company, Montreal, Quebec*.

Application for Certification under Investigation

International Longshoremen's Association Local 38-162, on behalf of all longshoremen employed in the B.C. Coast Steamship Service of the Canadian Pacific Railway Company, Victoria, B.C.

Decisions of Board in Appeal Cases

1. On January 5, 1946, the Board issued Reasons for Judgment on the appeal of the *National Paper Employees' Association and the National Paper Goods Limited, Hamilton, Ontario*, from a decision of the Ontario Labour Relations Board, dismissing the application of the Association for certification of bargaining representatives.

The Ontario Board dismissed the application on the ground that the employees had

been induced to choose a particular group of persons as bargaining representatives as a result of a course of conduct of an official of the Company, and, therefore, such bargaining representatives had not been properly elected.

The National Board agreed in the result of the decision of the Ontario Board and was not prepared to certify bargaining representatives on the application of the Employees' Association which was incorporated by a solicitor who was, at the same time, a Director of the Company involved and who subsequently acted as Counsel for the Association before the Ontario Board and the National Board.

2. Following a hearing, the Board dismissed the appeal of the *Sitka Spruce Lumber Workers Union* from a decision of the Minister of Labour for British Columbia rejecting the application for certification of bargaining representatives submitted by such union on behalf of the employees of the *Sitka Spruce Lumber Company, Vancouver, B.C.*

The Minister of Labour for British Columbia rejected the application of the Sitka Spruce Lumber Workers Union for certification on the ground that the Constitution of the Amalgamated Unions of Canada did not authorize it to issue a Charter to the appellant union. It was disclosed during argument before the Board that the Constitution of the Amalgamated Unions of Canada had been amended so as to authorize it to issue Charters but the meeting at which this amendment was authorized was held two days subsequent to the submission of the application.

Under these circumstances, and in view of the fact that all steps prescribed by the Wartime Labour Relations Regulations, P.C. 1003 for the negotiation of a collective agreement, including a reference to a Board of Conciliation, had been taken by the certified union, the International Woodworkers of America, the Board expressed the opinion that bargaining representatives appointed by another organization should not be now certified and dismissed the appeal.

3. On February 7, Reasons for Judgment were given allowing the appeal of the *Canadian Fishermen's Union* from a decision of the *Nova Scotia Wartime Labour Relations Board*, rejecting applications of the Union for the certification of bargaining representatives appointed by the Union on behalf of the crew of each of a number of fishing vessels operating out of Halifax and Lunenburg, N.S.

The application had been rejected by the Nova Scotia Board on the ground that "the relationship between the crew members and the owners of each vessel in question was not

** Following investigation of the application, a public hearing and a representation vote.

the relationship of employees to employer as required to exist by the Wartime Labour Relations Regulations (P.C. 1003) and that, therefore, the Regulations had no application to the case in question."

In its Reasons for Judgment the Board expressed the opinion that the members of the crew of a fishing vessel whose remuneration is a share in the proceeds of the fish caught, are employees within the meaning of the Regulations and that there was nothing to

prevent the union from negotiating a collective agreement on the basis of a share in the proceeds of the catch or on any other basis.

Following the decision of the National Board, bargaining representatives appointed by the union were certified for the members of the crew of each vessel on whose behalf the appeal had been taken.

The texts of the Board's formal Reasons for Judgment appear below:—

Between: National Paper Employees' Association, Petitioner Appellant, and National Paper Goods Limited, Hamilton, Appellant, and Hamilton Allied Printing Trades Council, Intervener Respondent.

The Board consisted of the Chairman and Messrs. Best, D'Aoust, Deschamps, Mosher, Picard, and Taylor.

Reasons for Judgment

The judgment of the Board was delivered by the Chairman.

This is an appeal by the Association from a judgment of the Ontario Labour Relations Board, by leave of that Board, and an application by the Company for leave to appeal from the same judgment. The judgment in question dismissed the application of the National Paper Employees' Association for the certification of bargaining representatives elected by a majority of the employees of the Company.

Without expressing an opinion on the finding of the Ontario Board, this Board agrees in the result of that decision, and is not prepared to certify bargaining representatives on the application of an Association which

was incorporated by a solicitor who was at the same time a Director of the Company involved and who subsequently acted as counsel for the Association upon applications for certification heard by the Ontario Board and on appeal to this Board.

The Company will have leave to appeal but both appeals will be DISMISSED.

(Sgd.) G. B. O'CONNOR,
Chairman.
for the Board.

R. R. EVANS, Esq., K.C.

H. G. TURNBULL, Esq.

for Petitioner Appellant.

H. A. F. BOYDE, Esq., K.C.

for Appellant.

R. H. BROWN, Esq.

F. J. BARRETT, Esq.

J. W. BRUCE, Esq.

for Intervener Respondent.

Dated at Ottawa, February 5, 1946.

Between: Sitka Spruce Lumber Workers' Union, Appellant Petitioner, and International Woodworkers of America, Local 1-217, Respondent Intervener, and Sitka Spruce Lumber Company Limited, Vancouver, B.C., Respondent.

The Board consisted of the Chairman and Messrs. Best, D'Aoust, Deschamps, Hills, Mosher, Picard and Taylor.

Reasons for Judgment

The judgment of the Board was delivered by the Chairman.

This is an appeal by the Sitka Spruce Lumber Workers' Union from a decision of the Minister of Labour for British Columbia, who performs the functions of the British Columbia Labour Relations Board, dismissing its application for certification of bargaining representatives on behalf of the employees of the Company.

On March 3, 1944, bargaining representatives were selected by the International Woodworkers' Local and were certified by the Minister of Labour for British Columbia under the Industrial Conciliation and Arbitration Act of the province. Following the enactment of the Wartime Labour Relations Regulations, P.C. 1003, these bargaining representatives were re-certified by the Minister of Labour for British Columbia on June 1, 1944, under the Regulations. Since that time the International Woodworkers' Local has been negotiating with the Company but has been unable to conclude an agreement. A Conciliation Officer was appointed, pursuant

to the Regulations, but his efforts having proved unavailing a Conciliation Board was appointed and reported that both the employer and the union were satisfied with the standard form of agreement I.W.A. C.I.O. District No. 1, and that the employer would have signed it long since if he had not received a petition signed by 54 employees requesting the employer to refrain from signing any agreement with the International Woodworkers' Local (L.G., Oct., 1944, p. 1255).

The Minister of Labour for British Columbia dismissed the application on the ground that the Amalgamated Unions of Canada which issued the charter of the Sitka Spruce Union was not authorized by its own charter to do so. During the course of the argument before the Board, it developed that the charter of the Amalgamated Unions of Canada had been amended by the governing body so as to authorize it to issue charters and that this governing body had authority to make any amendment not inconsistent with the original charter. This amendment was confirmed at a general meeting of the members of the Amalgamated Unions two days after the date of the application for certification. The Board does not find it necessary to decide whether the amendment to the charter of the Amalgamated Unions by its governing body was effective at the date of the application.

The Wartime Labour Relations Regulations, P.C. 1003, do not expressly provide for the

revoking of certification of bargaining representatives. Section nine of the Regulations provides that the employees may elect new bargaining representatives after the expiry of ten months of the term of a collective agreement.

Here no collective agreement has been consummated but the bargaining representatives presently certified have taken all steps prescribed by the Regulations towards the negotiation of a collective agreement. The employer has not, however, proceeded with the completion of the agreement on the ground that the employees have, during the period of negotiation, changed their allegiance to another union. In these circumstances the Board is of opinion that bargaining representatives appointed by another organization should not now be certified.

The appeal is DISMISSED.

(Sgd.) G. B. O'CONNOR,
Chairman.

A. ANDRAS, Esq.
for Respondent Intervener.

Dated at Ottawa, February 5, 1946.

Between: Canadian Fishermen's Union, Lunenburg, N.S., Appellant, and Owners of "Sea Nymph" (A. M. Smith & Co. Ltd.), Halifax, N.S., Respondent, and Owners of "Lilla B. Boutilier" (Lilla B. Ltd.), Halifax, N.S., Owners of "Theresa E. Connor" (Nellie C. Ltd.), Halifax, N.S., Respondents, and Owners of 16 fishing vessels operating from Lunenburg, N.S., Respondents.

The Board consisted of the Chairman, Messrs. Best, D'Aoust, Deschamps, Hills, Mosher, Picard and Taylor.

Reasons for Judgment

This is an appeal by the union from the judgment of the Nova Scotia Wartime Labour Relations Board dismissing the application of the union for certification of bargaining representatives appointed by the union for the crew of each of a number of fishing vessels operating out of either Halifax or Lunenburg, N.S. Each application was for certification for the crew of a specified fishing vessel and was rejected by the Nova Scotia Board upon the ground that "the relationship between the crew members and owners of each vessel in question is not the relationship of employees

to employers required to exist by the Wartime Labour Relations Regulations and that therefore these regulations have no application to the cases in question."

The parties agreed upon the following facts covering the operation of *Lilla B. Boutilier* and *Theresa E. Connor*:—

- "1. The Power Schooners *Lilla B. Boutilier* and *Theresa E. Connor* are operated out of Halifax in the deep-sea fishing industry.
- "2. Of the sixty-four (64) shares in the *Lilla B. Boutilier* fifty-nine (59) are owned by *Lilla B. Limited*, a Nova Scotia corporation, and five (5) by the Master of the Vessel, George Himmelman.
- "3. Of the sixty-four (64) shares in the *Theresa E. Connor* fifty-nine (59) are owned by *Nellie C. Limited*, a Nova Scotia corporation, and five (5) by the Master of the Vessel, Clarence Knickle.

4. All the share capital in both Lilla B. Limited and Nellie C. Limited is beneficially owned by Maritime National Fish Limited.
5. The crews of both Vessels are engaged by the Master. No Articles or other contracts of service are signed. Members of the crew are not obligated to remain for more than one voyage and, on the other hand, may be discharged at the end of any voyage if not satisfactory.
6. Each Vessel is provisioned by the Cook under the supervision of the Master. The Cook actually purchases the provisions and makes all contracts for such purpose. He is, however, directly responsible to the Master. In the ordinary course when the catch is sold to Maritime National Fish Limited, the cost of provisions is actually paid by that Company and charged against the Vessel's share of the catch.
7. At the end of each voyage the gross catch is sold at prevailing price. From the gross amount so received are deducted the following amounts:—

Commission of the Master at 2½ per cent of the gross.

Cost of bait, ice and fuel oil.

Rent of Sounding Machine.

\$1 for each day of the voyage for the Cook.

\$1 for each day of the voyage for the Engineer.

\$4 per trip for the Second Hand.

The amount remaining after making these deductions is divided equally into two parts, one known as 'the Vessel's share' and one known as 'the Men's share'.

The Men's share is divided equally among all crew serving on the Vessel, including Master, Engineer, Cook and Second Hand.

From the Vessel's share there are deducted and paid the following amounts:—

Commission to the Master—1½ per cent of the gross proceeds of sale.

\$1 per day for the Cook

\$1 per day for the Engineer.

And the full pay of the Ketchy, so-called.

When, as is the usual practice, the catch is sold to Maritime National Fish, Limited, that Company issues its cheque to the Master for a lump sum covering not only the amount above referred to as 'the Men's Share' but also the commissions of the Master at 2½ per cent and 1½ per cent respectively, and the amounts payable to the Cook, Engineer, Second Hand and Ketchy. The Master distributes the money among the persons entitled to it. The only voucher or receipt that Maritime National Fish Limited receives is the paid cheque endorsed by the Master.

The balance thereafter remaining is credited to the account of the Vessel with Maritime National Fish Limited, and the Vessel is charged with any expenditures that may have been made on her behalf by that Company.

8. When, as sometimes happens, the catch of either of the above Vessels is landed at a port other than Halifax, the Master sells the catch to the buyer at such points, receives the money and makes the division on the basis above set forth. Any amounts received by Maritime National Fish Limited from the Master on any such division are credited by Maritime National Fish Limited to the account of the Vessel."

The agreed statement of facts covering the operation of the *Sea Nymph* is as follows:—

"1. ENGAGEMENT OF CREW

The arrangement between the Owner and the Captain is made by mutual agreement between them.

The Captain usually contacts the mate and other members of the crew with the exception of engineers. In some cases the Owner reserves the right to approve the Captain's choice of mate.

Engineer staff is contacted and approved by the Owner.

"2. PROVISIONING OF SHIP

(a) Prior to May 5, 1945, cost of provisions was deducted from vessel's share. Contract for provisions made by owner.

(b) After May 5, 1945, cost of provisions deducted from crew's share. Provisions contracted for by owner on behalf of crew. Crew provides list of provisions wanted.

"3. DIVISION OF PROCEEDS AT END OF VOYAGE

(a) Prior to May 5, 1945; attached are copies of:—

(i) Share Statements for March 17, 1945, catch.

(ii) Wages Payroll for above date.

From gross receipts there was deducted rental of depth sounder of \$50. The balance was divided among vessel and crew, the latter receiving the percentages shown and the vessel the balance which varied from trip to trip depending on the size of the crew. The vessel paid all operating expenses out of its share including a fixed amount per day to each member of the crew. Gross Receipts from sale of livers divided among crew without deduction.

(b) After May 5, 1945

Attached is a copy of a statement showing settlements for trip May 15 to 25, 1945.

Amounts deducted from gross for mate, Chief Engineer, Second Engineer and Bos'n are on a daily basis and in effect are paid by crew and vessel equally. Cook is paid on a daily basis by the crew.

Operating costs shown are deducted from the crew's share.

Captain receives $2\frac{1}{2}$ per cent of gross charged to crew and vessel, $1\frac{1}{2}$ per cent of gross charged to vessel and shares with crew in its net proceeds.

Gross receipts from sale of livers divided among crew without deduction.

"4. DURATION OF ARRANGEMENT

Arrangement is on a voyage basis—one trip in each case. Crews are substantially the same from trip to trip.

"5. RESPONSIBILITY FOR SALE OF CATCH

No definite arrangement but vessel owner sells catch on behalf of all.

"6. SHIPPING ARTICLES

No Shipping Articles in use.

"7. HOLDING OF SHARES IN VESSEL

Shares in vessel held by A. M. Smith & Company, Limited, paid for in cash."

The ownership of each of the 16 vessels in the Lunenburg fishing fleet is, as is the custom, divided into 64 shares held by a number of persons and the Master of the ship invariably holds some of the shares in his boat. For salt fishing voyages a written agreement is signed by the owner and crew but for fresh fishing voyages, which are of short duration and for which no agreements are signed, similar provisions also apply.

The type of contract is as follows:—

AGREEMENT WITH FISHERMEN

"It is agreed between.....agent or owner of the schooner..... and..... master or skipper of the said schooner and the fishermen whose names are to this agreement subscribed, that the said.....will at their own expense equip the schooner with all necessary tackle and apparel for a fishing voyage or voyages; the provisions, salt and craft will be provided and paid for by..... and that.....the master or skipper with the said fishermen will pursue the cod and other fisheries in the schooner during the present fishing season and will use their best endeavours to procure all the fish, oil, etc., they can and for the success of the voyage they may go;.... And it is agreed that the owner or agent may dispose of and sell all the fish, oil, etc., that may be landed from the said schooner wherever he may think proper and after deducting from gross stock all the charges for ice, bait, oil barrels, gaugers' fees, fish making, weighing fish, boy's wages and master's privileges, the net proceeds to be divided as follows:—

One-half to owner or owners, the remaining half, after deducting cook's wages, among the fishermen, in proportion to the quantity or number of fish which they shall have respectively caught. The master's privilege to beper cent on the gross stock, each man paying his proportion of the expenses of shipping the fish, etc., home in accordance with the quantity or number caught, and each one of the crew, with the skipper to pay an equal part of the following charges, viz.,

towing, medicine. And the said owner doth hereby stipulate and agree with the said fishermen that he will render a just and true account of the delivery of the said fish, oil, etc." Then follow additional provisions governing discipline of crew. Each fisherman's share is called a "lay".

This Board does not have the benefit of the reasons which moved the Nova Scotia Board to find that the Wartime Labour Relations Regulations would not apply to these cases but heard very able argument of counsel for the parties. Counsel for the respondents specified seven objections to the applications. It is convenient to deal with them separately as follows, namely:—

1. He contends that the Managing Owner of a ship or a ship's husband ordinarily has no power or authority, as such, to employ members of the crew of a ship.

The Managing Owner appoints a master or skipper who selects a crew and the crew enter into a verbal or written agreement with the Managing Owner in the terms above set out. It is clear that the Managing Owner, acting in conjunction with the master or skipper appointed by him, has authority to employ the fishermen.

2. Counsel for the respondents contends that the Managing Owner of a ship has no legal authority, expressed or implied, to enter into a collective agreement within the meaning of the said Regulations or any other agreement or contract for or on behalf of the other part owners of a ship unless the same is necessary for the prosecution of her voyages.

Having regard to the terms of the Wartime Labour Relations Regulations, P.C. 1003, which require an employer to negotiate in good faith with bargaining representatives elected or appointed for the employees affected after due certification, this Board is of the opinion that the Managing Owner has the authority to enter into a collective agreement on behalf of the owners of the ship.

3. Counsel for the respondents contends that the Wartime Labour Relations Regulations are not applicable to any employees or other persons who do skilled or un-skilled clerical, manual or technical work outside the territorial waters of Canada.

The Wartime Labour Relations Regulations, P.C. 1003, expressly apply to navigation and shipping but counsel for the respondents contends that the War Measures Act does not apply to employees when they are outside the territorial waters of Canada. The applications are to certify bargaining representatives for the purpose of negotiating a collective agreement. The appellant union has

its place of business at Lunenburg and the respondents are resident and domiciled in Canada. The negotiations for the collective agreement will be conducted in Canada and the Board has no doubt as to its jurisdiction to certify bargaining representatives appointed by the union for such negotiations. As the Expeditionary Force was mobilized and sent overseas pursuant to Orders in Council enacted under the authority of the War Measures Act, a decision that the Act had no extra-territorial effect would be quite revolutionary at this time.

4. Counsel for the respondents contends, and this is the crux of the matter, that the members of the crew of a fishing vessel whose remuneration is a share in the net profits of the voyage are not employees within the meaning of the said Regulations but are partners in the venture. One can imagine how annoyed the owners would be if fishermen pledged their joint credit as a partner may do.

But this Board finds they are employees and not partners:—

Limley on Partnership—10th edition, p. 40.

"Again, in whaling voyages the sailors are usually paid a certain proportion of the produce of the oil obtained but even before *Bovill's Act* (28 and 29 Vict. C. 86) they were not therefore partners, either with each other or with their employers."

The Riverman (1928) P. 33, Hill, J. p. 38.

"One-third went to Furlay and Co. and two-thirds to Hinchcliff as master and the master paid the crew, that is the mate. In view of these facts it cannot be said that Hinchcliff was a partner of Furlay and Co. He did not share in the profits. Nothing at all was said about losses."

Dry v Boswell (1808) 1 Camp. 329.

Lord Ellenborough, said p. 975.

"But the agreement with Russell subsequently appeared to be this, that the defendant in consideration of working the lighter shall receive half her gross earnings, and that Russell as owner should receive the other half. This was only a mode of paying the defendant wages for his labour and was different from a participation of profits and loss; and under these circumstances no partnership could be considered as existing between him and the owner of the lighter."

Mair v Glennie (1815) 4 M & S 240.

Lord Ellenborough, p. 825:

"The ground is because payment of the captain's wages was to depend, as to its amount upon a reference to the value of the cargo; but according to that mode of argument every seaman in a Greenland voyage would become a partner in the fishing concern. There is no pretence therefore for saying that the captain was a partner because his wages were to be regulated and paid by reference to a calculation on the profits of the adventure."

In *Perrett v Bryant* (1836) 2 Y & C 61; 170 E.R. 312, Baron Alderson said, at page 315:

"In the case cited to me of *Coppart v Page* (Forrest 1) there the adventurers in each fishing boat shared jointly as partners the profits and losses of the adventures according to agreed proportions. But here the fact is very indistinctly stated in the defendant's answers, and is not more distinctly made out by the evidence, I should conclude from the facts appearing on the evidence, that this is really only a mode of calculating the amount of wages due to the dredgers from the owners of the boats, and that the former take no interest in the fish themselves, which belong to the owners of the boats."

On the other hand, in *The Riby Grove* (1843) 2 W. Rob 52; 166 E.R. 675, it was held that the Admiralty Court had no jurisdiction to enforce a stipulation in a mariner's contract under which he was to be paid a certain proportion of the produce and oil obtained on a whaling voyage and in declining jurisdiction the Court described the transaction as in the nature of a partnership.

In *Boon v Quance* (1) (1909) 102 L.T. 443—it was held that a master of a vessel taking a share of the gross receipts was not a workman within the meaning of the *English Workmen's Compensation Act*.

In *Richards v Job Bros. Co.* 1894-96 Newfoundland Law Reports P. 642, Little, J. said at page 646:

"Now the very nature of the agreement, its plain meaning and effect ought to be sufficient to determine this question of alleged partnership. The parties under it do not stand in the relations of principals, but clearly in that of employer and employee. On its face it is an agreement of hiring and service, devoid of any personal liability on the part of the crew for debts and liabilities that must necessarily be incurred in preparation for, or in prosecution of the voyage. The agreement provides the crew shall come into service on a certain day, and continue to prosecute the fishery for a trip or trips, until such time as the master thinks fit to abandon the same, certainly indicating a position of employer and employee. They were, it is true, entitled to participate equally in one-third part of the voyage, subject to certain charges, but this share must be regarded as an apportionment made in lieu of wages. Where such contractual relations exist it has been settled by courts of law that a partnership is not thereby created." The leading Nova Scotia case is a decision of the Supreme Court en banc. *Swinehammer v Sawler* (1985) 27 N.S.R. 448, in which the Court held that a fisherman's share was under the Seaman's Act exempt from attachment as:

Meagher, J. at p. 452—"The term 'wages' was used in the statute in a generic sense—and with the intention that it should include earning of every kind whether by the month, the voyage, or by a share in the adventure itself."

Graham, E.J., said at page 543:

"Such agreements do not constitute partnership but are merely a hiring of the seamen, and the shares agreed upon are

wages and are recoverable as such, though Pothier styles them a species of partnerships."

The National Labour Relations Board of the United States has decided that fishermen working for a "lay" are employees for the purposes of collective bargaining in *re Trawler Maris Stella, Inc.*, 12 N.L.R.B. Decisions, page 421:

"We find that the fishermen herein involved are employees, not employers, within the meaning of the Act and that the 'lay' settlement is primarily a method used in determining the amount of wages to which fishermen are entitled."

and in *re Cape Cod Trawler Corp'n.* 23 N.L.R.B. Decisions, page 212:

"We find that the fishermen here involved are employees, not employers, within the meaning of the Act and that the 'lay' settlement is primarily a method used in determining the amount of wages to which fishermen are entitled."

In *re Performing Right Society v Mitchell* (1924) 1 K.B. 762, *McCardie, J.* at 767:

"It seems, however, reasonably clear that the final test, if there be a final test, and certainly the test to be generally applied, lies in the nature and degree of detailed control over the person alleged to be a servant.

....A master is one who not only prescribes to the workman the end of his work, but directs or may at any moment direct the means also.... A servant is a person subject to command of his master as to the manner in which he shall do his work."

This Board finds fishermen whose remuneration is a share in the proceeds of the fish caught, after certain deductions, are employees within the meaning of the Regulations.

5. Counsel for the respondents further contends that "A collective agreement within the meaning of the said Regulations cannot be made applicable to the rates of pay, hours of work and other working conditions of the members of the crew of a fishing vessel whose remuneration is a share in the net profits of a fishing voyage."

The word "net profits" is misleading. What the fishermen get is a share of the proceeds of the catch after certain deductions. This Board sees nothing to prevent the union from negotiating a collective agreement on this or any other basis.

6. Counsel for the respondents further contends "It would be impractical for any persons having interests in fishing vessels to enter into a collective agreement or any

other agreement to run for a period of not less than one year, as is provided by Section 15 of the said Regulations, for each fishing voyage is a separate venture lasting for a few days or weeks only, at the end of which the crews' engagements are terminated and the whole or numbers of such crews change from voyage to voyage."

The collective agreement is to be made with the union and a change in the personnel of the crew makes no difference. Changes occur in the personnel of the employees in every industry.

7. Finally, Counsel for the respondents contends—"A fishing vessel is personal property divided into 64 shares owned by many part-owners who are tenants in common and any one or more or all of the part-owners in her may by Bill of Sale in statutory form sell their shares without notice to the others and no collective agreement made by one set of part-owners could be binding upon another set of part-owners."

Where the certificate issued by the Board provides for certification of bargaining representatives for employees of the owners of a specific ship, a transfer of the interest of a part-owner in the vessel would not affect such certification nor the obligation of the owners to bargain with the representatives of the employees so certified.

This Board cannot sustain the respondents' objection to certification. The appeal is ALLOWED and the bargaining representatives appointed by the union will be certified for the members of the crew in each boat on whose behalf an appeal has been taken in this instance.

Dated at Ottawa, February 7, 1946.

Conciliation Proceedings Under The Wartime Labour Relations Regulations

The Wartime Labour Relations Regulations provide conciliation machinery to attempt settlements of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the Minister of Labour by the Wartime Labour Relations Board (National) or by the Provincial Board in their respective jurisdictions. A Conciliation Officer is then appointed to confer with the parties and endeavour to effect an agreement. If the Conciliation Officer is unable to bring about a settlement of the matters in dispute and reports that in his view an agreement might be facilitated by the appointment of a Board of Conciliation, a Board is then established by the Minister of Labour. The duty of such a Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

Assignment of Conciliation Officers

During February, 1946, Conciliation Officers have been assigned to confer with the parties in an attempt to effect an agreement in the following cases:—

Beattie Cadillac, Chevrolet, Oldsmobile Co., Ltd., Toronto, and Local No. 1, Industrial Union of Automotive Employees (CCL)—William Dunn, Conciliation Officer.

British-American Motors, Ltd., Toronto, Ont., and Local No. 1, Industrial Union of Automotive Employees (CCL)—William Dunn, Conciliation Officer.

Castings of Ottawa Limited, Ottawa, Ont., and Local 641, International Union, U.A.A.I.W.A. (UAW-CIO)—C. W. Rump, Conciliation Officer.

Coleman's Packing Co., Ltd., London, Ont., and Local 54, Packinghouse, Butchers and Allied Food Workers' Union of Canada (TLC)—William Dunn, Conciliation Officer.

J. H. Connor and Son., Ltd., Ottawa, Ont., and Local 641, International Union, U.A.A.I.W.A. (UAW-CIO)—C. W. Rump, Conciliation Officer.

Dominion Magnesium Ltd., Haley, Ont., and Local Union 829, International Union of Mine, Mill and Smelter Workers (CIO-CCL)—G. Fenwick, Conciliation Officer.

General Motors Products of Canada (Truck Retail Branch), Toronto, Ont., and Local 1, Industrial Union of Automotive Employees (CCL)—William Dunn, Conciliation Officer.

Giles, Rice & Peters Ltd., Toronto, Ont., and Local No. 1, Industrial Union of Automotive Employees (CCL)—William Dunn, Conciliation Officer.

John A. Lang & Sons Ltd., Kitchener, Ont., and National Union of Shoe and Leather Workers (CCL)—G. Fenwick, Conciliation Officer.

N. Slater Co. Ltd., Hamilton, Ont., and Local 3305, United Steelworkers of America (CIO-CCL)—G. Fenwick, Conciliation Officer.

Steel Company of Canada, Ltd. (Hamilton Works), Hamilton, Ont., and Local 1005, United Steelworkers of America (CIO-CCL)—J. S. McCullagh, Conciliation Officer.

The Wellesly Hospital, Toronto, Ont., and Local 204, Building Service Employees International Union (AFL-TIC)—William Dunn, Conciliation Officer.

The Weston Dairy Ltd., Weston, Ont., and Local 647, Milk Drivers and Dairy Employees Union (AFL-TIC)—H. Perkins, Conciliation Officer.

Agreements Facilitated by Conciliation Officers

In the following cases, reports were received from Conciliation Officers indicating the successful completion of negotiations, and the signing of an agreement:—

Coleman's Packing Co., Ltd., London, Ont., and Local 54, Packinghouse, Butchers and Allied Food Workers' Union of Canada (TLC), William Dunn, Conciliation Officer.

Dominion Wheel and Foundries, Ltd., St. Boniface, Man., and Local 174, International Moulders' & Foundry Workers' Union of North America, Thomas Williams, Conciliation Officer.

Lundy Steel Products Ltd., Toronto, Ont., and Local No. 3, Federation of Industrial Workers (CCL), G. Fenwick, Conciliation Officer.

N. Slater Company Ltd., Hamilton, Ont., and Local Union 3305, United Steelworkers of America (CIO-CCL), G. Fenwick, Conciliation Officer.

Boards Established

During February Boards of Conciliation were established but not fully constituted as follows:—

Canadian Industries, Ltd. (Windsor Works), Windsor, Ont., and Local 195, International Union, U.A.A.I.W.A. (UAW-CIO).

Railway Association of Canada, Montreal, P.Q., and Division No. 4, Railway Employees' Department (AFL).

Steel Company of Canada, Ltd. (Hamilton Works), Hamilton, Ont., and Local 1005, United Steelworkers of America (CIO-CCL).

Boards Fully Constituted

During February Boards of Conciliation were fully constituted as follows:—

John East Iron Works, Ltd., Saskatoon, Sask.—The Board of Conciliation established to deal with a dispute between John East Iron Works, Ltd., and Local 3493, United Steelworkers of America (CIO-CCL), was fully

constituted on February 23, 1946, with the appointment of Mr. F. C. Cronkite, Saskatoon, Sask., as Chairman of the Board, who was appointed on the joint recommendation of the other two members of the Board. Messrs. M. A. MacPherson, K.C., Regina, Sask., and P. G. Makaroff, K.C., Saskatoon, Sask., were appointed on the nomination of the employer and employees respectively.

Board Reports Received

Pursuant to the Wartime Labour Relations Regulations, Boards of Conciliation are allowed 14 days in which to make their reports. This can be extended, either by

the Minister, or by mutual consent of the representatives of the parties concerned. The following report was received by the Minister of Labour during December:—

Report of Board In Dispute Between The Holden Building, Vancouver, B.C., and Local 244, International Union Building Service Employees

On February 18, 1945, the Minister of Labour received the report of the Board of Conciliation, the personnel of which was as follows:—J. F. Keen, Chairman, Vancouver, appointed by the Minister on the joint recommendation of the other two members of the Board, Messrs. B. Warfield of Vancouver and R. K. Gervin of Vancouver, appointed on the nomination of the employer and employees respectively.

The Honourable, Minister of Labour,
Ottawa, Ontario.

SIR:

We beg to report that the Board of Conciliation established by you in re the above matter met together with the parties to the dispute on February 1, and after hearing representations from each side and endeavouring to clear up some difficulties and misunderstandings, it seemed to the Board that it would not be impossible for the parties to "get together."

Accordingly, on the undertaking of both parties to further negotiate and make an honest endeavour to come to an agreement, the Board adjourned until February 15.

At the meeting on February 15, the parties reported that they had been unable to reach an agreement, chiefly because Mr. Holden was not satisfied as to his status and that of his employees in relation to the Union. He brought several witnesses, who were examined and cross-examined.

After considerable discussion, Mr. Holden finally consented to enter into an agreement with the Union, so one that had been drafted was read and explained by the chairman clause by clause. Copies of this have now been signed by both parties, and the original with two duplicates are attached hereto as part of this report.

Respectfully submitted,
(Sgd.) J. F. KEEN,
Chairman.

(Sgd.) R. K. GERVIN,
Member.

(Sgd.) BARNEY WARFIELD,
Member.

The appended agreement included clauses alluding to hours of work, grievance procedure, holidays with pay and working conditions.

When it has been ratified by the parties it will be summarized in a subsequent issue.

Activities Under the Conciliation and Labour Act and Order in Council P.C. 4020

OFFICERS of the Industrial Relations Branch dealt with 9 industrial disputes during the month of February, involving 1,282 work-people employed in 13 separate establishments. Of these, 5 were new disputes which originated during the month and 4 were situations which had been unternminated as of January 31, and received further attention in February. These disputes were dealt with

under the provisions of the Conciliation and Labour Act and under Order in Council P.C. 4020. They were thus distinct from and in addition to the conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver,

Winnipeg, Toronto, Ottawa, Montreal, Fredericton, N.B., and Glace Bay, N.S. The territory of the two officers resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and two officers resident in Fredericton, N.B., and Glace Bay, N.S., represent the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of the Industrial Relations and staff are situated in Ottawa.

A brief summary of one of the cases of chief interest follows:—

Packinghouse Workers, Various Provinces.—Reference was made in the February issue of the LABOUR GAZETTE to negotiations between Canada Packers, Limited, Burns and Company, Limited, and Swift Canadian Company, Limited, and their employees as represented by the United Packinghouse Workers of America, with Mr. Justice S. E. Richards, of Winnipeg, acting as mediator.

On the question of whether, under the correct interpretation of the "Winnipeg settlement" of November 2, 1945, rates of pay for piecework were to be increased by 6.8 per cent, it was agreed in the negotiations at Toronto that such increase should be made in its piecework rates of pay at Canada Packers, Limited, as well as in the hourly rates of pieceworkers. The increases were to be retroactive to November 1, 1945. Other piecework rates were to be the subject of local negotiation.

It was agreed also that the Swift Canadian Company, Limited, would continue its present practice of paying overtime rates at time and one-half to its weekly-paid employees for all hours worked in excess of 45 per week, and that the weekly-paid employees of Canada Packers, Limited, and of Burns and Company, Limited, who are not now paid overtime rates, would receive compensating time off.

The main problem in dispute arising out of the "Winnipeg settlement" was whether the work week of 48 hours at one plant and 45 hours elsewhere should be "scheduled" for totals of 48 and 45 hours respectively, as claimed by the Union, or whether, as claimed by the Companies, the schedule should provide for "tolerance" hours to be divided amongst the days of the week as had been the practice in some plants, with a total schedule of more than 48 or 45 hours. On this point it was mutually agreed that the work week should be scheduled for totals of exactly 48 and 45 hours per week, upon the understanding that the schedules of daily hours should be negotiated locally and fixed by mutual agreement locally. It was provided however that such daily scheduled hours should not exceed nine hours in any one day from Monday to Friday, or exceed five hours on Saturday.

The Union claim that paid statutory holidays should be considered as time worked in computing overtime was not pressed because, under the settlement of the scheduled work week mentioned above, overtime would be calculated as a general rule on a daily basis.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the *LABOUR GAZETTE* from month to month. It is not possible, because of limitation of space, to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Mining Non-Ferrous Smelting and Quarrying: Metal Mining

BOUSQUET (NORANDA), P.Q.—MIC-MAC MINES LIMITED AND INTERNATIONAL UNION OF MINE, MILL AND SMELTER WORKERS, LOCAL 696.

Agreement to be in effect from November 1, 1945, to October 31, 1946, and thereafter from year to year, subject to 30 days' notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees.

Hours of work: underground shifts to be approximately 8 hours from collar to collar, variations not in excess of 15 minutes shall not be regarded. Schedule of hours in effect, as far as practical, shall remain in force during the life of the agreement. Overtime: time and one-half or rate and one-half will be paid, subject to the approval of the National War Labour Board, for any time actually worked in excess of 48 hours in any one week for those who work an 8-hour day or in excess of 54 hours for those who work a 9-hour day and for work on three specified statutory holidays. Vacation plan as approved by the National War Labour Board in its Findings and Directions of January 29, 1944, shall continue in force.

Wage rates presently in effect shall continue in force during the life of the agreement.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Tobacco and Liquors

MONTREAL, P.Q.—NATIONAL BREWERIES LTD. (DAWES BLACK HORSE BREWERY AND FRONTENAC BREWERY) AND INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL 62.

Agreement to be in effect from August 17, 1945, to August 16, 1946, and thereafter from

year to year subject to 30 days' notice. The company recognizes the union as the sole bargaining agency for all eligible employees.

Hours of work: 48 per week, day workers—9 per day Monday through Friday, 3 on Saturday; night workers—10 per night Monday through Thursday, 8 on Friday; shift workers, 6 shifts of 8 hours. Overtime: time and one-half for work in excess of the regular hours for work on Sundays (other than as part of a regular shift) and on 6 specified statutory paid holidays (in addition to regular pay for these holidays). Vacation: one week with pay for all employees on the payroll before October 1 of the previous year.

Hourly wage rates: bottling department—group leaders 65 cents, others 58 and 61 cents; brewing department—group leaders 70 cents, kettlemen 65 cents, assistant kettlemen and cellar men 61 cents, hop teasers 58 cents, others 61 and 65 cents; maintenance—electricians 85 cents, helpers 58 to 65 cents, plumbers 80 cents, carpenters 70 and 80 cents, helpers 58 to 65 cents, bricklayer-cement finishers 75 cents, labourers, cleaners, yardmen 58 cents; male hiring rate 55 cents; female workers—bottle inspectors, label inspectors and sorters, rinser operators, full carton inspectors and empty bottle inspector 50 cents; various packers and others, 47 cents, which is the hiring rate for women.

A premium of 5 cents per hour shall be paid employees working on the night shift.

Provision is made for seniority rights and grievance procedure.

AMHERSTBURG, ONT.—CALVERT DISTILLERS (CANADA) LIMITED AND DISTILLERY, RECTIFYING AND WINE WORKERS' INTERNATIONAL UNION OF AMERICA, LOCAL 73.

Agreement to be in effect from July 1, 1945, to July 1, 1946, and thereafter from year to year, subject to 60 days' notice. The company recognizes the union as the sole and exclusive collective bargaining agency for all eligible employees. The employer agrees to retain in employment only union members in good standing of which the union is to be sole judge. New employees shall immediately become temporary members of the union for the probationary 90-day period when they shall become union members.

Hours of work: basic week for all departments is 6 days of 8 hours, a 48-hour week. The normal working schedule for the various departments follows: distillery and dry house, boiler room and janitors, a 48-hour week as above; warehouses, yard, bottling house men, maintenance, coopers and truck drivers, 5 days of 8 hours and one of 4, a 44-hour week; bottling house women, 5 days of 8 hours, a 40-hour week. Overtime: time and one-half for work performed in any one day beyond the basic schedule, double time for work on Sundays (or 7th day in the week for shift workers)

and 7 specified statutory holidays. Vacation: one week with pay for employees with one year's continuous service with the company, 2 weeks with pay for those with 5 years' service.

Hourly wage rates: miscellaneous labour, 65 cents; warehousemen-skilled, 70 cents; blenders and reducers, 80 cents; truck drivers, 65 to 70 cents; fermenting room, yeast room and dryer operators, 70 to 80 cents; mill room, cooker and still operators, 75 to 85 cents; tradesmen and mechanics-1st class, 90 cents to \$1, 2nd class, 80 to 90 cents; painters, 75 to 80 cents; carpenters, 85 cents to \$1.05½; helpers, 70 to 80 cents; engineers-3rd class or higher, 90 cents to \$1; bottling house women, 50 to 55 cents.

Provision is made for a pension plan, seniority rights and grievance procedure.

Manufacturing: Rubber Products

NEW TORONTO, ONT.—THE GOODYEAR TIRE AND RUBBER CO. OF CANADA LTD. AND UNITED RUBBER WORKERS OF AMERICA, LOCAL 232.

Agreement to be in effect from September 14, 1945, to November 1, 1946, and thereafter from year to year, subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees. Check-off: company will deduct initiation fee and union dues from pay of union members who so authorize.

Hours of work: females—8 per day, males 8 and 8½ per day, a 5-day week. Overtime: time and one-half for work in excess of regular work hours in any 24-hour period and from Saturday noon until Sunday midnight. Seven specified statutory holidays will be observed. Vacation: one week with pay for employees with one year's continuous service, 2 weeks with pay for employees with 10 years' service (effective 1946, 2 weeks will be granted for 5 years' service if approved by Regional War Labour Board).

Wage rates: those presently in effect to continue for the duration of the agreement. Minimum rates are 55 cents per hour for janitor service and similar unskilled jobs, 62 cents for all other male labour, excepting mechanical classifications, and 41 cents for female labour.

Provision is made for seniority rights and grievance procedure.

TORONTO, ONT.—DUNLOP TIRE AND RUBBER GOODS COMPANY, LTD. AND UNITED RUBBER WORKERS OF AMERICA, LOCAL 132.

Agreement to be in effect from July 7, 1945, to June 30, 1946, and thereafter from year to year, subject to 30 days' notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees.

Hours of work and overtime as established shall apply on hours worked in excess of 9 hours in any 24-hour period, or in excess of 8 hours, when schedule of work calls for three 8-hour shifts in 24 hours, or in excess of 8 hours, in the case of maintenance and engineering trades on a regular 8-hour day. Time and one-half shall be paid for work on any of 6 specified statutory holidays and 2 other specified days if they should be proclaimed holidays in the locality. Vacation: one week with pay for employees with one year's continuous service with the company, 2 weeks with pay for employees having 10 or more years' service.

Wage rates: scale of wages presently in effect to continue during the life of the agreement subject only to changes ordered by the War

Labour Board. A premium of 5 cents per hour shall be paid to all regular night shift workers or those commencing work at 6 p.m. or after.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Textiles and Clothing

LONDON, ONT.—SUPERSILK HOSIERY MILLS (DIVISION OF GENERAL PRODUCTS MANUFACTURING CORPORATION LTD.) AND UNITED TEXTILE WORKERS OF CANADA, LOCAL 24.

Agreement to be in effect from October 22, 1945, to October 21, 1946, and thereafter from year to year, subject to notice. The company recognizes the union as the exclusive collective bargaining agency for all eligible employees.

Hours of work: a 48-hour week is standard in all departments. All work performed in excess of the standard week is overtime, payable at time and one-half or piece-work rate and one-half. Seven specified statutory holidays will be granted all employees without pay. Vacation: one week with pay for all employees with one year's service; one week to those with 3 months' service but less than one year, with pay equal to 2 per cent of their total earnings with the company.

Wage rates and ranges of wage rates presently in effect shall continue for the duration of this agreement.

Provision is made for seniority rights and grievance procedure.

WOODSTOCK, ONT.—HARVEY-WOODS UNDERWEAR DIVISION OF YORK KNITTING MILLS LTD. AND UNITED TEXTILE WORKERS OF AMERICA, LOCAL 125.

Agreement to be in effect from January 14, 1946, to January 13, 1947, and thereafter from year to year, subject to notice. The company recognizes the union as the sole and exclusive bargaining agency for all eligible employees. Check-off: union dues will be deducted monthly from the pay of employees who so authorize by the company and remitted to the union.

Hours of work: 48 per week from October to April inclusive, on the basis of 5 days of 9-6 hours; from May to September inclusive, 5 days of 9 hours each, a 45-hour week. Overtime at time and one-half for work in excess of the regular work hours and for work on Sundays and statutory holidays except where part of regular working week. Vacation: present system to continue for duration of the agreement.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Metal Products

TORONTO AND BRANTFORD, ONT.—MASSEY-HARRIS COMPANY LTD. AND INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCALS 439 AND 458

Agreement to be in effect from September 21, 1945, to September 20, 1946, and thereafter from year to year, subject to notice. The company recognizes the union as the bargaining agent for all eligible employees.

Hours of work: 48-hours per week, composed of 8½ hours per day Monday through Friday, and 4½ on Saturday, or 8 hours per day 6 days a week. Overtime: time and one-half for all work in excess of these hours, for work on Sundays (except as part of regular shift) and

6 specified statutory holidays. Vacation: one week with pay; employees with 25 years service or over, 2 weeks with pay. A 10-minute rest period shall be allowed in each half shift and 5 minutes will be allowed for washing up and putting away tools at the end of each shift.

Wage rates: scale presently being paid shall be maintained for the duration of the agreement.

Provision is made for seniority rights and grievance procedure.

WINDSOR, ONT.—THE FORD MOTOR COMPANY OF CANADA AND THE INTERNATIONAL UNION, UNITED AUTOMOBILE AIRCRAFT AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, LOCAL 200

Agreement following a strike and arbitration recorded in previous issues (L.G. Jan., 1946, p. ...), to be in effect from February 15, 1946, to March 31, or September 30, 1947, and thereafter subject to two months' notice. The company recognizes the union as the sole collective bargaining agent in respect to wages and other conditions of employment for all eligible employees for the duration of the agreement or until certification of another bargaining agency.

Check-off: effective February 1, 1946, a compulsory check-off for all eligible employees (whether members of the union or not) shall be set up to continue for the duration of the agreement and be a condition of continuance in or entrance into the company's service. Any employee shall have the right to become a member of the union by paying the entrance fee and complying with the conditions and by-laws of the union. The amount of the check-off shall be such sum as may from time to time be assessed by the union on its members according to its constitution for general union purposes and shall not extend to a special assessment or increment in an assessment which relates to special union benefits or any entrance fee.

"No strike, general or partial, shall be called by the union before a vote by secret ballot supervised by an officer of the Department of Labour for Ontario appointed by the Minister of Labour for that province shall have been taken of all employees to whom the agreement applies and a majority voting have authorized the calling of a strike within two months from the balloting." The union shall repudiate any strike or other concerted cessation of work whatsoever that has not been authorized and called by the union by any group or number of employees and the union shall declare that any picket line set up in connection therewith is illegal and not binding on members of the union. Should the union violate either of the above conditions it shall be liable to the penalty of a suspension of the check-off, in the case of any unauthorized strike by the union or an unauthorized general strike or concerted cessation of work by employees, which it does not repudiate or of a picket line in connection therewith in respect of which it does not declare, for not less than two and not to exceed six monthly deductions; and in the case of an unauthorized partial strike or cessation of work by employees, for failure to repudiate or declare, not less than one and not more than four monthly deductions. Employees participating in any such unauthorized strike or concerted cessation of work shall be liable to a fine of \$3 a day for every day's absence from work and the loss of one year's seniority for every continuous absence for a calendar week or part thereof.

Hours of work: employees engaged on continuous operations shall be allowed a lunch period of 20 minutes. Two 10-minute rest periods during each shift shall be granted the workers contingent upon strict adherence to the time limits of such.

Wages: subject to any law or regulation having the force of law, scale of wages and classification may be the subject of a supplementary agreement. An employee shall be paid 5 cents per hour in addition to his regular hourly rate for the performance of work commenced between the hours of 1 p.m. and the following 5 a.m. but no overtime or extra time premium applies to such additional payment.

The desirability of a group medical, hospital and life insurance scheme for the benefit of the employees is agreed to and if arrangements are not completed within 6 months, the local may at its own expense make provisions for such benefits and the company shall upon employee's authorization make the necessary deductions monthly.

Provision is also made for the appointment of stewards and committeemen, seniority rights and grievance procedure.

Transportation and Public Utilities: Local and Highway Transport

MONTREAL, P.Q.—THE PROVINCIAL TRANSPORT COMPANY AND CANADIAN BROTHERHOOD OF RAILWAY EMPLOYEES AND OTHER TRANSPORT WORKERS, DIVISION NO. 265 (BUS OPERATORS AND GARAGE EMPLOYEES)

Agreement to be in effect from July 21, 1945, to July 20, 1946, and thereafter subject to 30 days' notice. The company recognizes the union as the sole bargaining agency for the bus operations and garage employees of the company. Check-off: company to deduct union dues monthly from pay of members who so authorize and remit same to Brotherhood.

Hours of work: operating department, bus operators—10 per day, exclusive of meal period, within a spread of 12 hours for both regular and spare employees; maintenance department, garage employees—9 consecutive hours of service per day, exclusive of meal period, except shunters, cleaners, washers, gasmen and doormen, whose hours are 10 per day and 11 per night shift. Overtime: time and one-half for work in excess of the regular hours, time and one-quarter for work on Sundays or seventh day of the week and any of 5 specified statutory holidays for maintenance department and any of 3 specified statutory holidays for operating department. Vacation of 7 days with pay after one year's service with the company and an additional day for every additional year's service to a maximum of 14 days. Minimum of \$25 per week compensation while on vacation.

Wage scale: operating department—1st year, 70 cents per hour, thereafter 75 cents for all driving time except private cars and operating baggage trucks where rate is 50 cents per hour; waiting time, loading time, and deadheading as passenger, 35 cents per hour during 1st year and 37½ cents thereafter; deadheading (driving) coach, 70 cents per hour 1st year and 75 cents thereafter; layover time on charters (minimum of 6 hours per day plus expenses), 70 cents per hour 1st year and 75 cents thereafter. (An employee operating a bus in interurban or charter service will be paid 3.59 cents per mile in any day when mileage is sufficient to make earnings greater than when paid at hourly rate.

Driver shall be allowed 20 minutes at driving time wage rates over and above the time table driving time for each trip performed.) The company guarantees to each regularly assigned employee a minimum of 5 hours at driving time wage rates each day, providing employee reports at his regularly assigned reporting time each day, and to each spare employee a minimum of 10 hours' pay at waiting time wage rates each day, provided that such employee reports regularly at the specified hour for work and carries out the duties assigned to him each day. A premium of 5 cents per hour will be paid bus operators charged with the training of new employees; maintenance department—mechanics, electricians, carpenters, painters, blacksmiths, upholsterers, machinists and welders, 3rd grade, 56 to 61 cents; 2nd grade, 66 to 71 cents; 1st grade, 76 to 81 cents per hour; body workers, radiator repairmen, sanders and polishers (paint shop), 3rd grade, 50 to 55 cents; 2nd grade, 60 to 65 cents; 1st grade, 70 to 75 cents; springmen, batterymen and tire journeymen, 3rd grade, 55 cents; 2nd grade, 60 cents; 1st grade, 65 cents; greasers, interior cleaners (paint shop), 3rd grade, 50 cents; 2nd grade, 55 cents; 1st grade, 60 cents; shunters, cleaners, washers and gasmen, 3rd grade, 45 cents; 2nd grade, 50 cents; 1st grade, 55 cents; janitors and doormen, 3rd grade, 43 cents; 2nd grade, 47 cents; 1st grade, 52 cents; firemen (stationary boiler),

55 to 70 cents; apprentices start at 33 cents and receive a 5 cent per hour increase every 6 months until minimum rate of occupational classification is reached and paid. For night work a premium of 15 per cent over and above regular rate is paid.

Provision is made for an apprenticeship plan, seniority rights and grievance procedure.

Transportation and Public Utilities: Water Transportation Correction

VANCOUVER, B.C.—UNION OIL COMPANY OF CANADA LTD. AND THE CANADIAN SEAMEN'S UNION (PACIFIC COAST DIVISION)

The agreement, effective July 30, 1945, which was summarized in the LABOUR GAZETTE, November, 1945, page 1876, was there stated to be between the British American Oil Company Ltd. and the above union. Information recently received indicates that although other assets of the Union Oil Company of Canada Ltd. were acquired by the British American Oil Company Ltd., the ship which this agreement affects was not taken over by the British American Oil Company Ltd., but by another company. The agreement as signed was between the Union Oil Company of Canada Ltd. and the Canadian Seamen's Union (Pacific Coast Division).

Collective Agreement Act, Quebec Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the LABOUR GAZETTE, January, 1943, p. 86. Proceedings under this act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Recent proceedings under the Act include the extension of two new agreements and the amendment of 13 others, all of which are noted below. A request for the amendment

of the agreement for millinery workers for the province was published January 26. Requests for the amendment of the uncorrugated paper box agreement for the province and the tannery agreement for the province were also gazetted January 26. A request for the amendment of the clockmakers' and the ladies hairdressers' agreements at Montreal were gazetted February 2. Requests for the amendment of the printing trades agreement at Quebec, and the building trades agreement in Hull were published February 9. Requests for the amendment of the tannery agreement for the province, and the agreement for employees of religious institutions at St. Hyacinthe were published February 16.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties. An Order in Council was published repealing the right to levy of a parity committee.

Manufacturing: Vegetable Products

BAKERS, MONTREAL

An Order in Council, dated February 8, and gazetted February 16, amends the previous Orders in Council for this industry (L.G., June, 1944, p. 753, Sept., p. 1140, and previous issues). The amendment does not affect the summary already given.

*Manufacturing: Textiles and Clothing***TEXTILE AND JUTE BAG MANUFACTURERS, MONTREAL**

An Order in Council, dated January 10, and gazetted January 19, extends the term of the agreement (L.G., February, 1945, p. 182, and previous issues) to December 31, 1946.

*Manufacturing: Pulp and Paper Products***UNCORRUGATED PAPER BOX INDUSTRY, PROVINCE OF QUEBEC**

An Order in Council, dated January 24, and gazetted February 2, amends the previous Orders in Council for this industry (L.G., August, 1945, p. 1197, Oct., p. 1520). The amendment does not affect the summary already given.

*Manufacturing: Metal Products***GARAGES AND SERVICE STATIONS, MONTREAL**

An Order in Council, dated January 10, and published January 26, amends the previous Orders in Council for this industry (L.G., March 1945, p. 349, and previous issues). Any work performed after 7 p.m. by service men shall be paid for at the regular rate, increased by 25 per cent. This also applies to work performed on Sundays. In establishments operating 24 hours a day and employing more than one shift the service men in shifts working from 7 p.m. to 7 a.m. shall be paid the regular rate increased by 15 per cent. As for Sunday the said regular rate shall be increased by 25 per cent. The other amendment does not affect the summary already given.

GARAGES AND SERVICE STATIONS, SHERBROOKE

An Order in Council, dated February 8, and gazetted February 16, extends the term of the agreement (L.G., March 1945, p. 349, April, p. 517) to March 10, 1946.

*Construction***BUILDING TRADES, QUEBEC**

An Order in Council, dated January 10, and gazetted January 26, amends the previous Orders in Council for this industry (L.G., August 1944, p. 1007, and previous issues) by providing that "the employers in the pulp and paper industry are exempted from the provisions of the decree with regard to the maintenance of mills producing pulp and paper."

Another Order in Council, dated February 8, and published February 16, also amends the previous Orders in Council for this industry by including the town of Rimouski and the municipalities of Notre-Dame du Sacre-Coeur, Saint-Germain-de-Rimouski, and Rimouski-Est in Zone III.

BUILDING TRADES, THREE RIVERS

An Order in Council, dated January 24, and gazetted February 2, amends the previous Orders in Council for this industry (L.G., March 1944, p. 359; August 1945, p. 1198, and previous issues) by the addition of one party to the electrical contractors.

*Trade***DAIRY EMPLOYEES, QUEBEC**

An Order in Council, dated February 8, and gazetted February 16, replaces the previous agreement for this industry. Agreement to be in effect to March 1, 1947 and thereafter from year to year. Territorial jurisdiction comprises the cities of Quebec and Levis and a radius of 10 miles from their limits.

Hours: 62-hour week for deliverymen, and 54 hours for all other employees. Overtime is payable at time and one-quarter. Minimum wage rates: foreman, tester and foreman \$32 per week; tester only (not foreman), production worker, shipper, ice cream seller, \$25; service man, category A, \$25, category B, \$20, category C, 25 cents per hour; deliverer, \$23; helper, \$14; seller on milk delivery, \$22.40. Vacation: one week with pay after one year's service.

Employers furnishing room and board to an employee may deduct \$1 a week per room and 20 cents per meal, but the employee is under no obligation to accept. Uniforms required to be furnished by the employer. Salesmen not responsible for losses due to credits authorized by the employer.

COMMERCIAL ESTABLISHMENTS, FARNHAM

An Order in Council, dated January 10, and gazetted January 19, makes obligatory the terms of a new agreement between certain commercial establishments and "Le Syndicat National des Employés du Commerce de Farnham". Agreement to be in effect from January 19, 1946, to January 18, 1947, and thereafter from year to year until notice. Territorial jurisdiction comprises the town of Farnham and to a radius of one mile from its limits.

Hours: 56½-hour week.

Wage rates: men, from \$12 per week during first year to \$20 during fourth year; women or girls, from \$10 during first year to \$18 during fifth year; occasional clerk—men 18 years of age, 25 cents per hour, over 18 years 40 cents, women or girls 25 cents; messengers \$8 per week (bicycle supplied); occasional messengers, 20 cents per hour; females (variety stores) from 22 cents in first year to 30 cents in third year. Vacation: one week with pay after one year's service.

*Service: Business and Personal***FUNERAL UNDERTAKERS, MONTREAL**

An Order in Council, dated January 10, and gazetted January 19, makes obligatory the terms of a new agreement between "La Section des Directeurs des Funérailles du District de Montréal de l'Association des Marchands Détaillants du Canada" and "Le Syndicat des Employés de Pompes Funèbres de Montréal, Inc." Agreement to be in effect from January 19, 1946, to January 18, 1947, and thereafter from year to year until notice. Territorial jurisdiction comprises the islands of Montreal and Jesus and within a radius of 10 miles around the island of Montreal.

Hours: 66 hours for 6 days of work, 11-hour day. Overtime is payable at time and one-half.

Wage rates: embalmers, \$37 per week; inexperienced servicemen, \$20 per week for the first 4 weeks of work and \$25 for the 48 weeks

following, \$28 after one year's experience; supernumerary employees, 50 cents per hour, a minimum of \$2 per call; mechanics, 47 to 62 cents per hour. Vacation: one week with pay after one year's service.

Provision is made for supplying of uniforms.

BARBERS AND HAIRDRESSERS, JOLIETTE

An Order in Council, dated January 10, and gazetted January 19, extends the term of the previous Orders in Council (L.G., January 1944, p. 70, September, p. 1143; January 1945, p. 71; February 1946, p. 187) to December 31, 1946.

BARBERS AND HAIRDRESSERS, SHERBROOKE

An Order in Council, dated January 17, and gazetted January 26, amends the previous Orders in Council for this industry (L.G., November 1945, p. 1679, and previous issues).

Territorial jurisdiction now comprises the city of Sherbrooke, the towns of Lennoxville, Bromptonville, Windsor, Richmond, Asbestos, East Angus, Cookshire, Coaticook, the village municipalities of Danville, Rock Island, Beebe Plain and Stanstead, the municipality of Bury and the territory in a radius of 5 miles around their limits, as well as the town of Magog and a radius of 8 miles around its limits. The hours during which stores may be kept open in Magog have been increased.

BARBERS AND HAIRDRESSERS, MISSISQUOI COUNTY

An Order in Council, dated January 17, and gazetted January 26, amends the previous Orders in Council for this industry (L.G., November, 1941, p. 1425; March, 1945, p. 351).

Hours: at Farnham are reduced to 51 per week, at Cowansville and Sweetzburg to 60 hours and are increased at Bedford to 63.

U.K. Building Regulations to be Revised

A PRELIMINARY draft of a proposed code of building regulations under the Factories Act, 1937, was issued for discussion purposes early in 1945 by the Ministry of Labour and National Service. On going into effect, the new Regulations will revoke those of 1926 and 1931. The object is to have them ready to apply during the period of extensive reconstruction. In a preface to the text, it is stated that in revising the earlier regulations:

Three things in particular have to be taken into account (1) developments in building construction since 1926 and accident experience since that date; (2) the International Labour Convention and Recommendations of 1937*, in the framing of which representatives from this Country took a prominent part; and (3) the greatly extended scope of the Factory Acts effected by the Act of 1937...

The draft Regulations will apply to the construction and demolition of buildings but will not apply to docks, harbours, wharves, bridges, sewers, and other such engineering projects. Subjects dealt with include scaffolds and means of access, working platforms, gangways, runs and stairs, ladders, openings in floors and walls, roof work, lifting appliances and gear, excavations, demolition, and the health and welfare of workers.

The health and welfare section includes provisions concerning first aid, shelter during interruptions of work due to bad weather, facilities for washing, for keeping dry clothes not used at work, for drying work-clothing, and for keeping protective clothing, suitable accommodation for meals, and a supply of wholesome drinking water at a convenient point. Adequate ventilation or suitable respirators

must be provided when injurious dust or fumes are given off in the grinding, spraying, or manipulation of any material. When persons are employed in a process where a lead compound or other poisonous substance is used suitable washing facilities including nail brushes, soap and towels are required. Goggles must be provided for persons engaged in dry grinding with a mechanically-driven wheel; in the cutting, dressing, carving, or breaking of stone concrete, etc., by means of a mechanically-driven portable tool; in the chipping, scaling or wire-brushing of painted or corroded metal surfaces; in the cutting of cold rivets or bolts from any structure; and in the welding or cutting of metals by means of an electrical, oxy-acetylene or similar process.

The draft Regulations also stipulate that every flywheel and every moving part of any prime mover, every part of transmission machinery and every dangerous part of other machinery must be securely fenced unless it is in such a position or of such construction that it is as safe as it would be if it were fenced. The selling or leasing of any prime movers or machines used in building operations is prohibited unless all revolving shafts, flywheels, couplings, toothed gearing, friction gearing, belt and pulley drives, chain and sprocket drives and all projecting screws, bolts or keys on any revolving shaft, wheel or pinion are enclosed or are so situated that they are as safe as they would be if they were securely fenced.

Vehicles must be in efficient working order, must not carry greater than the specified safe loads, and must not be loaded so as to interfere with the operator's view in any direction. Persons under 18 may not operate these vehicles unless they are under the direct supervision of a qualified person for training purposes.

* A mimeographed pamphlet containing the text of the Convention and Recommendations was published recently by the Department of Labour. Copies may be obtained by applying to the Legislation Branch, Department of Labour, Ottawa.

Canadian Vocational Training

THE following types of projects are now carried on under Canadian Vocational Training by the Dominion Department of Labour in co-operation with the Provincial Governments:—

- (1) The vocational and pre-matriculation training of discharged members of the Forces.
- (2) Training of apprentices.
- (3) Retraining of workers released from employment.
- (4) Training of foremen and supervisors.
- (5) Training of young people and assistance to students.
- (6) Dominion financial assistance to the province for vocational schools.

Cumulative Enrolment

From its inception up to January 31, 1946, the gross enrolment in all types of projects has been 466,250 made up as follows:—

Full-time Pre-Employment classes for war industry	108,416
Part-time classes for persons employed in war industry.....	35,256
Full-time plant schools in industry..	38,000
Industrial Supervisors and foremen...	107,226
R.C.A.F. Tradesmen	65,214
Army Tradesmen	49,262
Navy Tradesmen	9,056
Discharged Members of the Forces..	44,565
University Students	9,255

Training of Discharged Members of the Forces

On January 31 the number of veterans under training of all types was 28,667 which represented the biggest increase in enrolment up to the present. The number of new trainees enrolling during the month was 10,750 of which number 1,664 were placed for training on the job in industry, 3,654 registered in pre-matriculation classes and 5,353 in commercial vocational classes in CVT centres and in private schools.

Training is now available in approximately 75 different occupations in 64 special CVT centres located in 40 different municipali-

ties across the country. In addition to these centres, use is being made of over 40 provincial and municipal schools. The maximum capacity of the special CVT Centres has been increased, and at the beginning of February was 11,000 in pre-matriculation classes, 4,000 in commercial classes and 21,000 in vocational classes. This capacity does not include openings in the municipal schools or in privately owned schools.

Following special efforts to interest veterans to take training for the building and construction industry, it is interesting to note that at the end of January 3,258 veterans were enrolled in schools for pre-employment training in one of the building trades and in addition to these over 1,500 have been indentured to an employer and are completing their training on the job.

A special campaign has been inaugurated to promote training on the job in industry as this affords opportunities to entrance into a great range of occupations for which training cannot be given in a school. The closest co-operation is being maintained with the National Employment Service, whose staff in the local offices is being used to locate suitable training opportunities.

During the month a Conference was held at Ottawa of all the women's supervisors of training to discuss matters pertaining more particularly to the training and placement of women discharged from the Forces. Special consideration was given to the opening of schools for homemaking, practical nursing and dressmaking. In order to promote inter-departmental co-ordination in this branch of the training, the Conference was attended by representatives from the Department of Veterans Affairs and the Women's Section of the National Employment Service.

Serious difficulties are still being encountered in many localities owing to a shortage of machine tools, hand tools and other items of equipment, which have not been forthcoming from War Assets Corporation in sufficient volume to take care of the increasing number of applicants for training.

Conference of Women Supervisors of Canadian Vocational Training

"There is no more important project being carried on in Canada today than the Canadian Vocational Training program," it was stated by Arthur MacNamara, Deputy Minister of Labour, in an address to the conference of Supervisors of Women's Training at a three-day session in Ottawa in February. "During each of the last three months thousands of students, most of whom are ex-service personnel, have been added to the total enrolment of the Vocational Training Schools."

Mr. MacNamara expressed his opinion that a very large number of employers would take advantage of the plan whereby men or women could be taken into their employ and given a course of instruction pertaining directly to the employment in which they were engaged. Under this plan during the initial weeks of employment the wages paid by the employer for the veterans were supplemented by grants under the Vocational Training plan. He said that every official of the Labour Department, including those he was addressing, should become informed on the details of the plan and become an advocate of it so that employers could be given information upon request.

Mr. MacNamara stated that a campaign was being undertaken to increase the total number taking this type of training and it was anticipated that in Ontario alone 6,000 more would be enrolled very soon. He felt sure that employers would co-operate.

Figures which were provided by R. F. Thompson, director of Vocational Training, show that during the preceding three months total enrolments have more than doubled. At the end of October, 1945, enrolments were about 12,500 and by the end of January the total had risen to more than 28,000. During the month of January, more than 8,000 new students were registered at training schools. Of the total enrolment when the conference was held in February, more than 1,600 were women.

Mr. Thompson stated that in spite of the increasing strain on training facilities by the rapid increases in enrolments, the facilities which had been made available were proving adequate in almost every centre and there

were still vacancies in many courses in many centres. Only a few courses in certain centres which were particularly popular were crowded to capacity.

Brigadier J. E. Lyon, Superintendent of Rehabilitation Training, in his address to the conference stressed the importance of "training on the job" and that women should be encouraged to take advantage of this form of training.

In announcing the recent opening of a Hotels, Restaurant, and Bakery Trades School in Toronto by Vocational Training, Mrs. G. Dobson, Director of the school, expressed the opinion that there were excellent positions with good futures open to women as well as men in the hotel and restaurant business. Many businesses, including certain large chain-store concerns, were now contemplating expansion programs involving increases in their catering staffs. Similar schools are in the process of organization in other provinces.

The first training program in Canada for the graduation of licensed practical nurses was described by Miss H. Sparrow, Supervisor of Women's Training, Manitoba. The course began in Manitoba near the end of January sponsored by Canadian Vocational Training, and supported by the Canadian Nurses' Association and provincial legislation. Miss Marion Graham, Dominion Supervisor of Women's Vocational Training who presided at the conference, pointed out that this was the first course of its type in North America.

Although this is the first province to put the practical nursing program into full effect, in all provinces schools are in the process of being set up and arrangements have been made for the registration of graduates with the Provincial Nurses' Registries. Certain other provinces have proceeded towards the legislation controlling training, licensing and employment of practical nurses.

Miss R. A. Hamilton, of the Unemployment Insurance Commission, addressing the conference on placement, stated that a survey of employment vacancies for women showed that the greatest number were open to sewing machine operators in the textile, leather goods and upholstering trades.

Annual Report, Unemployment Insurance Advisory Committee

Present Financial Position of Commission Considered Satisfactory— Further Study of Benefit Schedule to be Made

IN its fifth annual report the Unemployment Insurance Advisory Committee recorded its findings with respect to the status of the Unemployment Insurance Fund, as at December 31, 1945.

The Advisory Committee was established under the provisions of the Unemployment Insurance Act, 1940, sections 82 and 83, and its functions are defined in sections 84 to 87, inclusive. The membership of the committee as constituted at present follows: Dr. W. A. Mackintosh (Chairman), J. F. McMillan, Percy R. Bengough, Miss Estelle Hewson, W. A. MacDonald, George Burt, V. R. Smith, and Eric Stangroom (Secretary). Its chief function is to keep a close check on the financial condition of the Unemployment Insurance Fund. Whenever it is considered by the Advisory Committee that the Fund is, or is likely to become, insufficient to discharge its liabilities or, on the other hand, if the Fund is deemed to be more than reasonably sufficient to meet its obligations, the Committee's findings shall be presented to the Governor General in Council before the end of February in each year, together with any remedial recommendations deemed necessary.

The report indicates that the Advisory Committee made an exhaustive study of the Commission's portfolio of investments and financial statements for 1945, together with a number of statistical statements and charts submitted by the Commission and the Dominion Bureau of Statistics. Careful study was also given to the benefit payments made during the year and their relationship to the Fund. In spite of the sharp increase in the payment of unemployment benefits during the last four months of 1945, the Committee was of the opinion that "the Fund is adequate to meet any liabilities that are likely to arise." It was not prepared however, "on the basis of so limited a period of unemployment, to say that the Fund is in any degree excessive, or makes over-provision for the future".

The report states that "the balance at the credit of the Fund as of December 31, 1945, was \$315,937,572.37 as compared with \$250,020,319.60 at the end of 1944." The whole of this amount is available to meet the future liabilities of the Fund towards insured persons since all administrative expenses are paid out of moneys voted by Parliament.

"The total revenue of the Fund for 1945 was \$80,478,728.48, as compared with \$82,773,893.97 for 1944. This is a nominal decrease of three per cent from 1944. When allowance is made for a special payment of \$940,000 in 1944 in respect of the liabilities of the Dominion Government for its insured employees and for non-recurring amortization charges of more than \$2,500,000 in 1945, the level of revenue for 1945 was higher despite some decline in contributions.

"Benefit payments during 1945 amounted to \$14,561,475.71, as compared with \$3,265,707.67 in 1944. This is an increase of \$11,295,768.04. The gross amount of benefit paid rose each month after June, 1945, and increased sharply in the last three months of the year. Benefits paid in December, 1945, totalled \$3,450,877.44, or virtually six times the total of benefits paid in June, 1945."

Investments and Benefits

Concerning the investments held on behalf of the Fund, it is pointed out that in accordance with the Act they are all obligations of the Government of Canada. The book value of bonds held is shown in the report to be \$306,894,982.17 and accrued interest totals \$1,919,473.11. The average weighted yield on the investment is given as 2.23 per cent.

It is pointed out that "in 1945, benefits for the first time reached a substantial level. The total payments of \$14,500,000 for the calendar year are less significant than the payments of nearly \$3,500,000 in December". Referring to prospective payments for the early months of 1946, the Committee anticipated that benefits "will be \$4,500,000 and higher per month." It is evident, the report states "that the total revenue of the Fund is sufficient to meet benefit payments of about the present (February) level, but that increases much beyond this level will draw down the Fund. It is probable that before the middle of the year there will be some net reduction in the Fund."

"The Committee has had representations from the Trades and Labour Congress and the Canadian Congress of Labour, in which it was contended that the benefit payments provided by the Act are inadequate and should be increased. It was argued that there had been a substantial increase in the cost of living since the Act was passed in 1940, and that standards of earnings and of living

had also increased substantially in the meantime. It was pointed out that in the higher earnings classes the benefits paid are a relatively low percentage of the average earnings. These representations made at the meeting of the Committee on February 25, 1946, are the first representations which the Committee has received on the adequacy of benefits. The Committee is not prepared to say without further examination that the Fund is adequate to provide for substantial increase in benefit rates, nor, having regard to the critical relation between benefit rates and earnings, is it prepared to say that a general increase in benefits would be sound. The Committee has been impressed, however, with the fact that the ratio of benefits to earnings in Class 7

(55 per cent and lower) is low, and further that there has been growing disparity between employers' and employees' contributions arising from the unexpected concentration of contributors in the top class. The Committee proposes, therefore, to undertake an immediate study of the needs and possibilities of the revision of the schedule of benefits under the Act, with a view to recommending any changes in benefits or contributions which may be found desirable and practicable."

While the committee admitted no direct responsibility for the administration of unemployment insurance, members representing both employers and employees urged the desirability of filling existing vacancies on the Commission without further undue delay.

*Activities of Unemployment Insurance Commission**

Analysis of Claims and Benefit for January—Insurance Registrations—Renewals of Insurance Books—The Fund—Decisions of Umpire

THE number of claims for Unemployment Insurance benefit registered in local offices of the Unemployment Insurance Commission during January, 1946, was 71,932, an increase of 14,320 over the 57,612 received during December, 1945. In January of last year 20,412 claims were filed. These figures include both initial and renewal claims. An initial claim (if the claimant has the minimum contribution credits required under the Act) establishes a benefit year. A renewal claim is used when a benefit year already exists for the claimant.

Persons who signed the live unemployment register during the last six working days of January numbered 145,952 (116,504 males and 29,448 females) compared with 113,386 (91,138 males and 22,248 females) who signed during the last week of December and 27,305 (20,046 males and 7,259 females) during the last week of January, 1945. Those who sign the live register each week are those who are maintaining live claims for unemployment insurance benefit.

During January 70,760 claims were adjudicated at Insurance offices, 57,383 being considered entitled to benefit and 13,377 not entitled to benefit. The chief reasons for non-entitlement were: "insufficient contributions while in insurable employment" (7,673 cases); "voluntarily left employment without just cause" (3,827 cases); and "discharged for misconduct" (867 cases).

A total of 102,718 persons received benefit payments totalling \$4,493,252 for 2,193,317 compensated unemployed days during January, 1946. In December, 79,856 persons were paid \$3,450,853 for 1,684,319 days, while in January of last year 15,575 persons were paid

\$546,569 for 281,193 days. The average amount paid per compensated day of unemployment was \$2.05 in January, 1946, \$2.05 in December and \$1.94 in January, 1945.

Insurance Registrations

Reports received from Local Offices of the Unemployment Insurance Commission showed that as at January 31, 1946, 3,102,941 employees were issued with insurance books and had made contributions to the fund at one time or another since April 1, 1945, an increase of 61,965 since December 31, 1945.

As at January 31, 1946, 156,038 employers were registered as having insurable employees, an increase of 1,726 since December 31, 1945.

Registration to January 31, 1946 by regions are shown in Table I:

Unemployment Insurance Fund

Total Employer-Employee contributions during January, 1946, amounted to \$5,308,584.99 compared with \$5,272,925.34 in the same month last year.

There has been a steady rise in benefit payments during the past six months as indicated below:

August, 1945	\$ 684,878 97
September	881,737 39
October	1,708,344 86
November	2,508,616 02
December	3,449,767 00
January, 1946	4,492,081 25

The net increase to the Fund during January was \$2,439,298.03.

Renewal of Unemployment Insurance Books

The importance of returning all insurance books and contribution records to the Unemployment Insurance Commission promptly at the end of the fiscal year, March 31, has been emphasized in a recent statement.

It is pointed out that on March 31 all current Unemployment Insurance Books will expire and employers with insurable employees will be required to obtain the new books from the Commission's National Employment Office through which the employer deals in Unemployment Insurance matters. In this connection, employers are asked to observe carefully the following instructions:—

1. On the front cover of each book;
 - (a) Fill in the employee's date of birth (including the year of birth) in the top right square marked "for employer's use" *irrespective of his age*, unless his date of birth is already shown elsewhere on the book cover.
 - (b) Fill in his latest address.
 - (c) Have him sign the book at the bottom right corner wherever possible.
 - (d) Complete the Armed Service questionnaire on the inside of the front cover where applicable.

All expired books in the employer's possession must be returned; and those for employees no longer engaged with employer, or engaged in non-insurable employment, must be returned clearly marked "not for renewal" across the front cover.

The required denomination of stamps should be placed in the expired book for insurable employment up to March 31. The denomination of stamp used in the previous pay period may be used for the last few

days, if these days form part of a pay period ending in April. All stamps should be cancelled by stamping or writing the employer's registration number over the stamp.

It should be noted that this year it will *not* be necessary to complete the second last page of the current insurance book, if the front cover is properly completed as outlined above. In returning expired insurance books, they should be sent by registered mail and addressed to the Book Renewal Section of the National Employment Office. If a receipt is desired, it will be signed and returned to the employer.

Employers who are operating on the Bulk Payment Method will not be required to complete form UIC 409B as in previous years, provided that all insurance books in their possession are treated as outlined above.

Their Contribution statements UIC 443 should be checked to see that the employee's name and insurance number, including the prefix letter, are clearly shown and that Contribution statements for which they have insurance books are stapled into the books with the front cover marked "not for renewal". If a firm operating under the Bulk Payment Method also operated on the stamp or meter method, the book renewal for each of these methods should be made separately. In every case a covering memo or letter must be enclosed with the books showing the employer's name, address and nature of business.

Failure on the employer's part to return these records promptly will constitute non-compliance with the provisions of the Unemployment Insurance Act and Contribution Regulations, and would render the employer liable to severe penalties.

Digest of Selected Decisions of the Umpire Under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945 number of the *LABOUR GAZETTE* and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike brief statements of the

principles upon which insurance against unemployment operates in Canada and of actual facts in specific cases coming before the Umpire on appeal.

The selected decisions are published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C.

CU.-B. 47

(July 13, 1945)

The claimant was notified of permanent employment which was suitable in his case, but he refused to apply for the position on the ground that he knew the prospectiva

employer, that the salary mentioned would not have been paid to him and that there was no advancement for him—HELD: The claimant had, without good cause, failed to apply for a situation which was suitable, as he ought to have presented himself to the employer with a view to ascertaining whether or not the employment would be given to him.

The material facts of the case are as follows:—

The claimant, a single man, aged 34 years, was employed as a clerk, Grade II, at a salary of \$100 a month by the Dominion Government from July 19, 1943 to August 15, 1944, when he resigned. On November 24, 1944, the claimant filed a claim for benefit, his claim was allowed and he drew benefit for a period of five months. On January 13, 1945, he was notified by the local office of the Commission of employment as a bookkeeper with an automobile parts dealer at a salary of from \$22 to \$25 per week. The employment was to be permanent.

The claimant refused to apply for the position on the ground that he knew the prospective employer and that there was no advancement for him with this employer.

The Insurance Officer disallowed the claim and disqualified the claimant from receipt of benefit for six weeks beginning January 13, 1945. In view of the fact that the claimant had been unemployed for some five months, it was considered that a reasonable time had elapsed within the meaning of the proviso to Section 30 of the Act, that the employment was suitable and that the claimant did not show good cause for failure to apply for the employment notified to him as required under Section 43 (b) (i) of the Act.

From this decision the claimant appealed to a Court of Referees on the ground that for various reasons the employment offered was not "suitable employment" in his case. When questioned by the Court of Referees as to the reason why he did not apply for the position, he stated that he knew the employer and had had previous dealings with him. He added further that the employer would need a clerk for only 8 or 10 days a year, and also gave other far-fetched reasons for refusing to apply for the position. When pressed further and asked why he did not give the position a trial at least, in view of the fact that the wages offered were \$25 per week, the claimant replied that the employer would never have given him \$25 per week.

The Court of Referees unanimously disallowed his appeal and expressed the opinion that the claimant should have presented himself to the employer with a view to ascertaining whether or not the employer would

give him employment. The Court of Referees was unanimous in finding that the claimant did not avail himself of the opportunity of suitable employment in refusing to present himself for the employment notified to him.

The Chairman of the Court of Referees granted leave to appeal to the Umpire.

DECISION

The Umpire's decision was that the claim should be disallowed and gave as his reasons:

There is no new evidence and on the basis of the evidence before the Court of Referees I am in entire agreement with their unanimous decision.

CU.-B. 48)

(July 16, 1945)

The claimant had registered herself at the local office of the Commission for part-time work for a certain number of hours on specific days and not more than three days a week, and she would only accept work on Saturdays if it were to be permanent. She was notified of full-time employment by the local office but she refused to apply therefor on the ground that it was not suitable—HELD: The employment offered was suitable and furthermore, the claimant had so restricted her sphere of availability for employment as to be, for all practical purposes, not available for employment.

The material facts of the case are as follows:—

The claimant, a widow, aged 35 years, with two children, was employed by a department store as a part-time sales clerk at a rate of fifty-three and one-half cents an hour from May 23, 1944 until January 5, 1945. Since July 1, 1941, and up to the time of filing this appeal, the claimant was also employed on Saturdays at a shoe store, at a rate of fifty cents an hour.

On January 5, 1945, her employment with the department store terminated on account of shortage of work and the claimant filed her claim for benefit on February 19, 1945, and the claim was allowed. On March 5, 1945, the claimant was notified by the local office of the Commission of employment at a local jeweller's as a sales clerk, the hours of work being from 9:00 a.m. to 6:00 p.m., wages \$17.50 to \$20 per week, which is the prevailing rate of wages in the district for this occupation. The claimant refused to apply for the employment notified, for the following reasons:

"I have never had other part-time work since commencing work five years ago, due to home and family responsibilities. Always willing to accept three or four days' work of five hours per day per week."

The Insurance Officer disallowed the claim and disqualified the claimant on the ground that she refused to apply for suitable employment notified to her by the local office of the Commission. The Insurance Officer was of the opinion that the work offered was "suitable employment" within the meaning of the Act and also that the claimant had restricted her availability for work to such an extent as to render her for all practical purposes, not available for work.

From this decision the claimant appealed to the Court of Referees. The Court of Referees came to the conclusion that the claim should be allowed on the grounds that the claimant had registered at the local office of the Commission for part-time work only and had been employed by the department store for seven months on that basis, and because of her responsibilities to her family she desired part-time work only.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the grounds that the employment offered was suitable in her case and that the claimant was not really available for work.

DECISION

The Umpire's decision was that the claim should be disallowed and the disqualification imposed by the Insurance Officer restored and gave as his reasons:

The claimant was willing to accept only part-time work for a certain number of hours on specific days and not more than three days a week and would only accept work on Saturdays if it was to be permanent. She

states that this is due to her domestic responsibilities. The claimant has two boys, thirteen and fifteen years of age, who work every night and Saturdays at a drug store and, in addition, she operates a rooming-house. The domestic responsibilities are considerable—so much so that it is difficult to see how the local office would be in a position to offer employment which would not interfere with those domestic responsibilities.

The Court of Referees seems to have been of the opinion that because the claimant registered at the local office of the Commission for a certain type of work, this registration determines what employment is suitable for the claimant. I do not think that this is so. The question of suitability of employment is a question of fact which varies for each person and cannot be predetermined simply by such means as a declaration by the claimant that only certain types of employment are suitable. The information given by the claimant on her registration for employment is quite properly a factor which should be taken into account in attempting to place her in suitable employment, but it is not the only determining factor.

While it is true that the claimant had been in employment which apparently allowed her at the same time to carry out her domestic responsibilities, that does not imply that the only employment suitable for the claimant is employment falling within that same pattern. I am in agreement with the conclusion of the Insurance Officer either that the employment offered was suitable or, alternatively, that the claimant had so restricted her availability for employment as to be, for all practical purposes, not available for employment.

Employment, Hours and Earnings

Summary

REPORTS received in the Department of Labour during the past month gave the following information concerning employment and unemployment in Canada.

Employment and payrolls at the beginning of January, 1946.—In conformity with the experience of the past 26 years, there was a contraction of industrial activity at the beginning of January, according to reports received by the Dominion Bureau of Statistics. This was mainly due to the curtailment of outdoor work, and shut-downs for inventories and for the holiday season.

The crude index number of employment (1926=100) declined from 173.2 a month earlier, to 167.9, as compared with 180.4 at January 1, 1945.

The largest reductions were in construction and manufacturing. In the case of the latter, recessions were most pronounced in food and textile plants, only in beverage factories was the trend upwards. Mining, local and water transportation, and services also showed recessions, mainly seasonal in character. On the other hand, communications, retail trade, steam railway operation and logging afforded more employment at January 1 than at a month earlier; also, in some instances, seasonal.

Reports from 15,590 establishments in eight leading industries recorded a decrease of 54,172 men and women, a loss of 3.1 per cent. Average weekly per capita earnings fell from \$31.63 at December 1, to \$29.85 at January 1, as compared with \$30.10, \$29.69, \$27.92 and \$26.13 at January 1, 1945, 1944, 1943 and 1942 respectively.

Unemployment as reported by the Unemployment Insurance Commission.—Claims for unemployment insurance benefit during January numbered 71,932 an increase of 14,320 over the preceding month.

Report on employment conditions, February, 1946.—The supply of available labour steadily mounted during February, while the demand for workers continued to decrease. Labour supply, as indicated by the number of unplaced applicants registered at employment offices increased by 35,592 during the

month to total 256,051 (208,822 male and 47,229 female) at February 21. The high rate of demobilization, together with the seasonal slackening in labour needs, continues to increase the discrepancy between labour supply and demand. At February 21, manpower requirements, exclusive of agricultural workers, totalled 75,890 (43,983 men and 31,907 women) as compared with 82,721, four weeks previous. This decline was due to the sharp reduction in the labour requirements of the logging camps which more than offset the slight increase in demand evident in other industries.

Man-hours and hourly earnings, January 1, 1946.—Average hours per week worked by hourly-rated wage-earners employed in manufacturing was 38.2 during the week preceding January 1, 1946. The average was affected by the time lost during the year-end holiday season. Average hourly earnings were 67.8 cents.

Applications for employment; vacancies and placements; January, 1946.—Reports received from the National Employment Service Offices of the Unemployment Insurance Commission during the five weeks December 28, 1945, to January 31, 1946, showed declines in the average number of placements made daily both when compared with the previous four weeks and with the five-week period December 29, 1944, to February 1, 1945. Under the first comparison manufacturing, construction and trade showed moderate declines and all other industrial groups registered decreases. In comparison with the five weeks ending February 1, 1945, apart from a nominal increase in agriculture all industrial divisions showed declines, the most pronounced being a substantial decrease in manufacturing and moderate losses in forestry and logging, services, trade and public utilities operation. During the period under review there were 144,401 vacancies reported, 208,346 applications for employment and 65,374 placements effected in regular and casual employment.

Unemployment in trade unions at the close of the quarter ending December 31, 1945, and for the year 1945.—Unemployment in trade unions rose to 3.0 per cent at

the end of the December quarter; an increase of more than twice 1·4 per cent recorded for September 30, 1945. This is the highest average since April, 1942.

Average unemployment for 1945 was 1·4 per cent, as compared with 0·5 recorded for 1944. It is the highest yearly average since 1912, when 2·2 per cent was registered.

Survey of civilian labour force.—The first of a series of surveys of the civilian labour force to be undertaken quarterly by the Dominion Bureau of Statistics indicates that in the week November 11-17, 1945, there were 4,364,000 persons employed, and 167,000 unemployed, making a total labour force of 4,531,000.

Employment and Payrolls at the Beginning of January, 1946

IN the experience of the period since 1920, industrial employment generally at the beginning of January has invariably shown a recession, resulting not only from curtailment of outdoor work, but from shutdowns during the holiday season, for inventory, and for various other reasons. The contraction in activity at January 1, 1946, was important, involving the release of some 54,200 men and women, a loss of 3·1 per cent; the number laid-off, however, was somewhat less than usual, while the percentage decline was considerably below the average in the last 25 years. On the other hand, the latest reduction was greater than at January 1 in any earlier winter since 1940, slightly exceeding the shrinkage at the same date in 1945. The 15,590 establishments in the eight leading industries furnishing information to the Dominion Bureau of Statistics reported a staff of 1,717,888, as compared with 1,772,060 at Dec-

ember 1. The crude index number of employment (1926=100), declined from 173·2 in the preceding survey, to 167·9 at the date under review, as compared with 180·4 at January 1, 1945. Since the curtailment was less than normal in extent, the seasonally-adjusted index showed a gain, rising from 169·1 at December 1, to 174·4 at the beginning of January.

The latest curtailment in employment was accompanied by a relatively larger falling-off in the indicated salaries and wages. The very general observance of Boxing Day as a holiday in addition to Christmas Day, the loss of working time due to increased absenteeism and lessened overtime work, together with the reductions resulting from lowered employment, brought about a decline of 8·5 per cent in the disbursements made on or about January 1, for services rendered in the week preceding.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Communications, retail trade, steam railway operation and logging afforded more employment at January 1 than at December 1; the improvement in some cases was seasonal. Manufacturing, mining, local and water transportation, construction and maintenance and services, on the other hand, showed contractions, also seasonal in character. The largest reductions were those of 22,400 in manufacturing, and 30,900 in construction as a whole. The loss of 2.3 per cent in the former was somewhat smaller than the average percentage decline in manufacturing at January 1 in pre-war years, although with the exception of 1945, it was greater than in any other year since 1940. Only in beverage factories was the trend upward at the date under review, when the most pronounced recessions were in food and textile plants. With the resumption of operations in the latter part of December in the automobile industry, following the settlement of the strike, the reductions in the iron and steel group were decidedly less than usual in the experience of past years.

Payrolls

The sum of \$51,281,598 was distributed at January 1 in weekly salaries and wages by the 15,590 reporting employers in the eight leading industries; this total was lower by 8.5 per cent than that of \$56,054,326 disbursed at the first of December. The falling-off was smaller than that of 9.2 per cent indicated at January 1, 1945, when the festivals had also been celebrated close to the week-end. The weekly per capita earnings fell from \$31.63 at December 1 to \$29.85 at the first of January, or by \$1.78; the loss of \$2.09 which had been shown at January 1, 1945, had lowered the average in the eight leading industries to \$30.10. In 1944, the mean was \$29.69, while in 1943 and 1942, the per capita figures were \$27.92, and \$26.13, respectively.

Including the data received from financial institutions, the number of persons in recorded employment at January 1 was 1,788,036, as compared with 1,841,979 at the beginning of December. The amounts received

Jan. 1, 1946.....	110.0	127.6	29.85	107.1	121.5	29.49

in weekly payrolls by these employees were given as \$53,676,799 paid on or about January 1, and \$58,440,863 paid on or about December 1. The general per capita figure for the nine major industries, including finance, was \$30.02, as compared with \$31.73 at the beginning of December, and \$30.18 at January 1, 1945.

Table II summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the 20 leading industrial cities, and gives comparisons as at December 1 and January 1, 1945. In Table I appears a monthly record for the eight leading industries as a

¹This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

whole, and for manufacturing, showing the movements of employment and payrolls from 1942.

The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100. Table II shows that in the period for which data are available, there has been an increase of ten per cent in the number of persons in recorded employment in the eight leading industrial groups, while the aggregate weekly earnings of these employees are higher by 27.6 per cent. Including finance, the gain in employment from June 1, 1941, to January 1, 1946, amounted to 10.3 per cent, and that in payrolls, to 28.1 per cent. The reasons previously given for the much greater rise in payrolls than in employment may again be stated:—(1) the greater-than-normal concentration of workers still indicated in the heavy manufacturing industries, where rates of pay are above the average and in which there has been a considerable amount of overtime work, although the importance of this factor has greatly lessened: (2) the payment of cost-of-living allowances to the majority of workers; the rates at which these allowances were

calculated were increased on more than one occasion before their incorporation in the basic wage-rates as from February 15, 1944; (3) the progressive up-grading of employees as they gained experience in their work; and (4) the granting of higher wage rates in numerous cases.

In spite of the marked seasonal curtailment in construction at January 1, 1946, the latest survey shows that at that date, as at December 1 and November 1, 1945, the levels of employment and payrolls in the non-manufacturing industries were higher in relation to the base of June 1, 1941, than was the case in the manufacturing classes, a situation which contrasts with that indicated during the war. Thus in the period of 4½ years for which the monthly payroll statistics are available, the non-manufacturing classes taken as a unit have shown increases of 13.7 per cent in employment and 35.8 per cent in the aggregate payrolls, whereas in manufacturing, there has been an advance of 7.1 per cent in employment and of 21.5 per cent in the weekly disbursements; at January 1, 1945, the former group of industries had reported a gain of 6.9 per cent in the number of employees, as compared with June 1, 1941, accompanied by that of 26.1 per cent in the weekly salaries and wages, while in manufacturing, there had been increases of 26.6 per cent in employ-

¹ The relative weight shows the proportion of employees reported in the indicated industry, to the total number of employees reported in Canada by the firms making returns at the date under review.

ment and 47.1 per cent in the payrolls, in the same comparison. During the last 12 months, the non-manufacturing classes taken as a unit have shown advances of 6.4 per cent in employment and 7.7 per cent in the weekly salaries and wages, while in manufacturing, there has been a decline of 15.4 per cent in the number of workers, and of 17.4 per cent in their aggregate weekly earnings.

In regard to the marked variations shown in the average earnings of workers in the different industrial classes, it must be borne

in mind that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in different industries is obviously an exceedingly important factor.

Man-Hours and Hourly Earnings, January 1, 1946

AN increase in average hourly earnings of wage-earners in manufacturing was reported by the Bureau of Statistics for the week ending January 1, 1946. The increase amounted to four-fifths of a cent, and was attributed partly to the fact that the reductions in employment at January 1 were greater among workers in the non-durable goods industries than among those engaged in the generally higher-paid durable goods industries. The re-employment of many workers in the automotive industries, following settlement of the strike in the latter part of December, also contributed to this result.

The hourly average at the date under review was 67.8 cents, as compared with 67 cents at December 1, and 70 cents at January 1, 1945, when war work was of course a factor of much greater importance than in more recent months. The decline in the average hourly rate in manufacturing as a whole in the last year is largely due to important changes in the industrial distribution of wage-earners during the period of conversion from wartime to peace-time production, and to reductions in the amount of overtime work.

The average of hours worked, at 38.2 in the week under review, was lower than that of 44.8 hours reported in the week ending December 1, being also lower than the mean of 39.6 indicated in manufacturing as a whole at January 1, 1945. It should be noted that the occurrence of the Christmas and New Year's holidays this winter on Tuesday may have resulted in a greater loss of working time than would be the case in years in which the holidays did not fall near to the week-end; the decline in the hours worked in manufacturing as a whole in the period under review was very similar to that recorded a

year ago, when the holidays had been celebrated on Monday.

Statistics were tabulated from 6,087 employers having a total of 687,307 hourly-rated employees, who worked an aggregate of 26,265,209 hours in the week preceding January 1, for which they received the sum of \$17,810,753. At December 1, the indicated wage-earners had numbered 708,677; their hours had amounted to 31,719,699, and their weekly wages, to \$21,250,989. Thus there were declines of three per cent in the number of wage-earners, 17.2 per cent in the man-hours reported, and 16.2 per cent in the total wages paid to hourly-rated wage-earners at January 1 as compared with a month earlier.

Average Hours Worked.—At the beginning of January, there was a decline of 6.6 in the average hours worked in manufacturing as compared with December 1; this seasonal reduction was very similar to that of 6.7 hours indicated at January 1, 1945, but the weekly figure was then rather higher than at the date under review. Most industries throughout the Dominion reported curtailment in working time due to the observance of the year-end holidays.

In the production of heavy manufactured goods, there was a general falling-off of 7.3 hours in the average time worked in the week ending January 1, as compared with that of 5.8 hours in the case of the light manufactured goods division. These figures approximate closely those indicated a year earlier, when there had been decreases of 7.2 hours in the durable manufactured goods, and of six hours in the non-durable manufactured goods industries, as compared with December 1, 1944.

The accompanying table summarizes the statistics of average hours worked and average hourly earnings in manufacturing in the period for which data are available:

AVERAGE HOURS WORKED AND AVERAGE HOURLY EARNINGS OF HOURLY-RATED WAGE-EARNERS IN MANUFACTURING

Week Preceding	Average Hours Worked			Average Hourly Earnings

* The averages at January 1 of 1945 and 1946, and April 1, 1945, were affected by the time lost during the year-end and the Easter holidays, respectively

Average Hourly Earnings.—The hourly earnings in manufacturing in the week ending January 1 averaged 67.8 cents, as compared with 67.0 in the week of December 1, 1945, and 70.0 in the week of January 1, 1945. As already stated, the reemployment of many of the workers in the automobile industries who had been on strike from September 12 to December 21, or had been laid-off as a result of the dispute, was one of several factors contributing to the increase in the month in manufacturing as a whole, and in the durable manufactured goods industries. Another and more important reason for the higher figure was the fact that in the latter group, the reduction in employment at January 1 amounted to 1.5 per cent, whereas the loss in the non-durable manufactured goods industries, in which earnings are generally lower, was 4.4 per cent.

In the last 12 months, the average earnings in manufacturing as a whole have declined by 2.2 cents per hour; in the heavy manufactured goods group there has been a falling-off of 2.5 cents in the rate, but that in the light manufactured goods has advanced by two-fifths of a cent per hour.

Average Weekly Wages.—Information on man-hours and hourly earnings is not available for all classes of wage-earners, but only for those who are paid by the hour, a restriction which also results in the exclusion of salaried personnel from these statistics. Among the classes of wage-earners frequently excluded for lack of accurate records of the hours actually worked are piece-workers in some, but not all establishments, route-drivers, delivery men, etc.; in many cases, employers state that the earnings of their wage-earners paid at other than hourly-rates exceed those of their hourly-rated personnel. In most industries, the wage-

earners for whom statistics are given in the present report constitute important proportions of the total employees of the co-operating firms. Thus at January 1, the wage-earners for whom data on man-hours and hourly earnings were available made up 74.4 per cent of the total number of persons of all categories on the staffs of the manufacturers furnishing monthly statistics on employment and payrolls at the same date; in the heavy manufactured goods industries, the proportion was 76 per cent and that in the light manufactured goods division, 72.9 per cent.

Non-Manufacturing Industries

In many of the non-manufacturing industries, comparatively few of the workers are employed at hourly rates, with the result that accurate records of hours worked are not available. The representation of the non-manufacturing industries in the monthly statistics of man-hours and hourly earnings is accordingly much smaller than that in manufacturing. At a later date, however, it is hoped that the representation in several important industries will be extended, permitting the publication of monthly figures for such groups.

In mining, the hours worked in the week at January 1 averaged 40.7, showing a decrease as compared with the week of December 1, when a mean 44.3 hours had been indicated; the latest average was nevertheless higher than that of 39 hours in the week of January 1, 1945. The average hourly earnings rose from 85.3 cents at December 1, and also at January 1, 1945, to 85.9 cents in the period under review. Building contractors reported a reduction in the number of hours worked by their wage-earners, but the hourly rate slightly increased

probably due to retention of the more highly-skilled employees in a period of seasonal curtailment of operations. In the highway group, the average hours worked were rather greater

than in the preceding period of observation, coinciding with the mean indicated at January 1, 1945, when the average hourly rate was also the same, at 64.6 cents.

Report on Employment Conditions, February, 1946

The following report covering the employment situation for the past month has been prepared by the Research and Statistics Branch, Department of Labour, in co-operation with the Employment Service, Unemployment Insurance Commission. The first section of the report deals with the Canadian labour market by occupational groups, while the second section gives a more detailed analysis of employment conditions by regions.

THE low level of demand and the accelerated rate of demobilization during the last few months has resulted in a steady accumulation of unplaced applicants.¹ During February, the supply of available labour increased by approximately 36,000 to total 256,051 at February 21. On the other hand, the number of unfilled vacancies² reported, exclusive of agriculture, dropped from 82,721 to 75,890 during the four weeks ended February 21. If the demand for woods workers is excluded, however, labour requirements rose slightly during the period. Further increases may be expected shortly as the end of February normally represents the seasonal low in labour demand. At February 23, 1945, the comparative reporting date a year ago, the demand for workers, totalling 121,247 was still considerably more than the available labour supply (89,300). Table I shows labour demand and supply by main occupational group and by sex, as at February 21, 1946. Table II presents a monthly comparison of total labour demand and supply.

A review of the manpower needs, classified by industry, reveals that the decline apparent during the four weeks ended February 21 was due largely to the reduced demands of the logging industry. The decrease was particularly pronounced in the Quebec Region. On the other hand, there has been an increase in the demand for women in the trade, finance, and service group as employers are placing their orders early in anticipation of increased

seasonal activity. The labour needs of the transportation industry rose slightly during February due mainly to the augmented labour requirements in Quebec. Table III shows unfilled vacancies classified by main industry group and by sex, as at February 21, 1946, with absolute and percentage changes in total demand during the last month.

Clerical Workers

At February 21, there were 22,858 applicants seeking clerical work and only 5,626 vacancies on file in employment offices. There were approximately twice as many female applicants as the number of employment opportunities available (4,282), while the supply of male clerical workers totalled 12,995 as compared with the demand for 1,344. During February, demand rose slightly, but this was more than offset by a substantial increase in the number of applicants seeking this type of work. Placement of clerical workers has been hampered considerably by the fact that many employers are requesting young single girls and offering comparatively low wages. A shortage of qualified and experienced stenographers persists with many of the available applicants unable to meet the exacting standards now specified. At February 21, there were 2,418 female stenographers and typists required across Canada with the available labour supply totalling 2,222; demand was concentrated mainly in Ontario and Quebec while a surplus supply of stenographers and typists was reported in the Prairie and Pacific Regions.

Sales Workers

A surplus of sales workers persists but some alleviation can be expected when the supply of consumer goods increases. At February 21, there were 4,055 vacancies reported while the number of unplaced applicants totalled 14,342. The situation was particularly acute for female workers, with demand less than one-quarter the available supply. Many of the employment opportunities for male workers are on a commission basis and applicants, generally, are not interested in this type of work.

¹ *Unplaced Applicants* are the number of Unreferred Applicants plus Unconfirmed Referrals. *Unreferred Applicants* are those who have not been referred to specific jobs as at the date indicated. *Unconfirmed Referrals* are applicants who have been referred but whose placement has not been confirmed.

² *Unfilled Vacancies* are the number of unfilled jobs on file in employment offices as at the date indicated.

Service Workers

Although the overall supply of service workers was greater than the demand at February 21, a shortage of female workers continues. The persistent demand for domestic servants accounts for this situation. The growth of the Home Aide courses across the Dominion is helping to alleviate this shortage but employment offices are experiencing difficulty in interesting applicants in the project. At February 21, there were 6,694 applicants to meet the demand for 8,568 female service workers; 43 per cent of this demand was for domestic servants. Although the need for waitresses, cooks, and kitchen workers is approximately equal to the available supply, a surplus of these workers is reported in the Quebec Region while a shortage continues in Ontario. The low wage rates together with the lack of housing accommodation, however, does not warrant any large scale transfer of workers at this time.

Skilled and Semi-skilled Workers

During February, the number of applicants classified as skilled or semi-skilled workers maintained a steadily upward trend while the number of vacancies showed a further decline. At February 21, there were 89,093 unplaced applicants registered as skilled or semi-skilled workers which is 12,946 more than four weeks earlier. Demand, on the other hand, dropped from 45,581 at January 24 to 37,116 at February 21. It is significant that more than half the vacancies are for woods workers but many applicants, especially ex-servicemen, are reluctant to accept this type of employment. Difficulty is encountered in the placing of suitable applicants, particularly in the mines, due to the lack of housing

accommodation. Some of the unplaced applicants are elderly while others do not possess the experience or skills now required by employers. With the upswing of activity in the spring, a considerable improvement should be evident in the unemployment situation among experienced workers.

Textile Workers—Textile mills, generally, are better supplied with labour than during the war years but there are still vacancies for both skilled and unskilled workers. At February 21, there were 1,118 vacancies for men and 6,974 for women while 3,514 unplaced textile workers were registered in National Employment Service offices. While more than half the demand is for sewing machine operators, there is still an urgent need for spinners, twisters, and weavers. In some areas, placement of suitable applicants is hindered by the lack of housing accommodation and the comparatively low wages offered.

Loggers—Woods operators, on the whole, have been fairly well supplied with labour, but some areas still report a shortage of experienced bushworkers. There is, moreover, a considerable supply of unskilled labour that could be placed if there were more skilled workers available. Operations in the Prairie and Pacific Regions have been hampered by adverse weather conditions while in other areas new orders have been placed in an effort to complete the winter's work before the spring break-up. Cutting and hauling are progressing favourably in most areas and indications are that this year's cut will be well above wartime levels. Vacancies on file in employment offices at February 21 totalled 15,610, which is approximately 8,000 fewer than one month earlier. More than half the demand was reported by

the Quebec Region but the supply of workers in this region numbered only 539.

Miners—Demand for miners at present is limited mainly to skilled workers. Muckers and drillers are in short supply but many of the applicants are unable to meet the exacting physical requirements. The shortage of certificated coal miners persists but some

improvement is expected as more ex-service-men return to the mines. At February 21, there were 1,522 vacancies for miners and 766 applicants registered. In practically all mining areas, the lack of housing accommodation is a deterrent factor in the placement of suitable applicants. While the labour situation in the mines is fairly satisfactory now, a sub-

Grand Total.....	43,372	31,568	74,940	-7,876	-9.5

stantial increase in demand can be expected with the seasonal upswing in prospecting and development work.

Construction Workers—The need for construction workers remains at a low level due to the seasonal slackening in activity and the shortage of building materials. More than 16,600 construction workers were registered as unplaced applicants at February 21 and there were only 2,233 vacancies on file in employment offices. The supply of all types of tradesmen exceeds the demand with the exception of bricklayers. Some areas report the need for experienced carpenters and plasterers, but orders are difficult to fill due to the fact that applicants do not possess the necessary skills.

Metalworkers—The supply of metalworkers far exceeds the demand. At February 21, there were 19,233 male and 1,966 female metalworkers registered as unplaced applicants while demand totalled only 1,940. The shortage of experienced moulders and core-makers continues and many orders have been placed in clearance. In Ontario, a campaign has been instituted to recruit foundrymen but most employers stipulate that applicants must be experienced. Women applicants are being

encouraged to accept service work but they are still showing some reluctance. As industry swings into full peacetime production and Canada's export markets expand, many of these skilled metalworkers will be absorbed.

Unskilled Workers

Approximately 40 per cent of the unplaced applicants at February 21 were classified as unskilled labour. Employment opportunities for this type of worker, however, continue at a low level. At the February date, unplaced applicants totalled 104,693 while unfilled vacancies numbered only 16,871; large surpluses were reported in the Quebec and Ontario regions. The lack of skilled labour in many industries is seriously curtailing the number of unskilled workers that can be effectively used. The "on-the-job" training plan for ex-servicemen should relieve this situation considerably. With the seasonal expansion of the construction and transportation industries many unskilled workers presently unemployed will be more easily placed. Similarly, an increased number of heavy labourers will be required in the mining industry as prospecting and development projects get underway.

Regional Analysis

The Regional Analysis which follows is based on semi-monthly reports received from Local Employment Offices across Canada. The report covers employment conditions during the month ended February 22, 1946.

Maritime Region

Woods Operations.—Over-all vacancies for bushworkers, which remained steady during the early part of the month, have dropped more than 50 per cent in the last fortnight, although new orders are being placed from week to week by operators trying to complete the winter's work before the spring break-up. The demand for experienced choppers still exceeds the supply, and larger orders for teamsters and yard labourers are expected as the season advances.

The largest Nova Scotian company recently cancelled orders for more than 100 choppers to work in three of its operations, but placed other orders for 50 labourers for loading, piling and general woodwork.

Urgent demands in the Sussex area have been partly met through clearance orders, and many bushmen have been transferred from camps where cutting is completed to others in the same locality which are undermanned. Heavy snows have forced some

contractors in northern New Brunswick to close their camps, and many men who are leaving the woods are unlikely to accept other employment until the spring drive commences.

Coal Mining.—Improvement in the labour situation of the Cape Breton coal fields is reflected in increased coal production. While only fully qualified miners are now in demand, former employees returning from the armed forces are being reinstated. Vacancies for approximately 325 certificated men in the Sydney area will be filled gradually as ex-miners receive their discharge.

Collieries on the Nova Scotia mainland are operating steadily, with full crews; absenteeism presents the chief problem. Production in the Minto area is seriously hampered by a shortage of 76 miners with New Brunswick certificates to work at the mine shaft. Heavy frost and a scarcity of repair parts have reduced stripping operations to a minimum, creating a surplus of mine labourers in the district.

Manufacturing.—The opening of the winter port season has brought greater activity in shipping and trade at Halifax. The local shipyards have enough contracts on hand to maintain their present staff of 2,100 men for some time to come, and may soon increase

their demand for skilled and semi-skilled workers.

One Liverpool shipbuilding firm, which has been laying off staff as its contracts reach completion, has met its need for steel workers by the transfer of these tradesmen from Pictou. The shipyards at Mahone Bay, which have gradually reduced their payroll to 90 persons, have tendered for the manufacture of prefabricated houses.

The labour situation in Maritime heavy industries is generally satisfactory. The car shops at New Glasgow are busy with the completion of their C.N.R. order and will soon swing into full production on foreign contracts. The foundry of the New Glasgow steel plant is working to capacity and that at Sydney has maintained its full wartime working force.

Annapolis Valley food-processing plants are still operating, and one factory re-opening at the end of the month will require the services of 160 women. Fish-packing plants, which will not open until April 1, are planning expansion which will necessitate the hiring of more girls than in previous seasons. Satisfactory response has been obtained to clearance orders for textile workers, especially in the Truro area. As soon as adequate housing is available, the shortage of women workers for the mills should be easily overcome.

Construction.—The shortage of building materials still retards new construction and repair work in some sections. Work on Veterans' Housing projects is suspended at Charlottetown and Sydney, and contractors in Amherst are similarly handicapped. However, the Health Centre at South Bay, N.B., and homes for veterans in Falmouth, N.S., are showing progress.

Ex-Servicemen.—While discharges mount steadily, job opportunities are fewer and placements are becoming more difficult. Many ex-service personnel are applying for vocational and skilled training.

Quebec Region

Woods Operations.—The publicity campaign for more bushmen has met with fair success, and in spite of the general exodus from the logging camps customary at the end of the cutting season, orders throughout the province have dropped to the 9,000 mark. Where emergency shortages of labour arise, they can be met by the transfer of men from districts where cutting has been concluded.

On the North Shore, the Matane office has outstanding orders for 882 woodsmen, chiefly teamsters and cutters. An epidemic of influenza raised the requirements of Rimouski con-

tractors over 700, but the release of about 500 bushmen by one company at the beginning of March should enable other employers to bring their crews up to strength.

In the Lake St. John section, one large company is calling for an additional 600 men, who are being transferred from other operations. Approximately 3,600 loggers are working in the Chicoutimi camps. One Baie St. Paul company, which will continue cutting operations throughout the summer, will engage all the woodworkers available. Only 300 more bushmen are needed in the LaTuque district.

Hard Rock Mining.—A number of clearance orders for muckers and drillers are being circulated in the Montreal area but these are hard to fill. The persisting shortage of mining labour is due chiefly to the lack of adequate living accommodation, and the building of bunkhouses is being considered as a solution to the problem.

Strikes in the United States have forced the asbestos mines of Quebec to reduce their operations to a 40-hour week. This temporary slow-down is affecting some 1,300 workmen.

Manufacturing.—Shortage of materials and continuing labour disturbances in the United States are hampering reconversion plans of various industries in the province. Several companies are still affected by the recently ended American steel strike. Sorel Industries, which lost a contract as a direct result of the steel shortage, has been forced to release 180 employees for an indefinite period. Three large plants at Shawinigan Falls have also been slowed down, and other local establishments face temporary lay-offs. A change-over in operations of Canada Car and Foundry's Montreal plant has necessitated a two-week release of staff. However, the company has ample orders on hand, and no permanent reduction in payroll is anticipated.

Despite an acute shortage of skilled moulders, Quebec foundries are still very busy. There are other encouraging developments in the employment situation. Another potroom at the Chicoutimi aluminum plant resumed operations on February 9, and 150 experienced employees with seniority rights were recalled. Machinery is being installed in the new building of the resins plant at Shawinigan Falls, and the company are ready to hire 50 men with veteran's preference.

The sale of the D.I.L. plant at Valleyfield to Canadian Arsenals Limited has resulted in the transfer of 160 employees. As the staff of the St. Malo arsenal (recently sold to a Quebec syndicate) has been absorbed at the Valcartier arsenal, no lay-off is expected. Only one aircraft plant in Montreal shows signs of activity at this time; the peak of re-hiring

has been reached, and the present payroll exceeds 5,000. The shortage of male and female workers for textile mills, clothing factories, footwear and rubber plants, and kindred industries persist throughout the province. In Montreal, Three Rivers, and through the industrial Eastern Townships, this lack of experienced tradespeople and trainees is handicapping production seriously.

Construction.—Shortage of building materials is causing the steady decline of residential and commercial building throughout the region and almost all local offices report construction tradesmen and labourers registered for work and for unemployment insurance benefits. Only bricklayers and plasterers are in demand at present, but work on municipal and highway projects, as well as construction planned for spring, is expected to absorb much of the surplus labour when the season opens.

Ex-Servicemen.—Reinstatements are again increasing but the development of new training-on-the-job opportunities is meeting with little success as yet. Requests for training courses under the Canadian Vocational Training plan are mounting steadily; schools are filled to capacity and many applicants have to wait several months for admission. Canada's first Hotel Management and Catering College has started its inaugural 16-week course for ex-servicemen at St. Paul l'Ermite. More than 140 applicants were accepted, and the catering trade of the province is prepared to place all graduates of the first course.

Ontario Region

Woods Operations.—Timber cutting is ended, and if favourable weather continues there will be no difficulty in completing the sleigh haul, now in full swing. This season's output of saw logs has been very encouraging, and pulpwood production has been well above the wartime level. The response to the 1946 appeal for woods workers has been satisfactory; approximately 2,000 men were sent to the logging camps in the course of one month, and local offices are still pressing recruiting to the utmost.

The Toronto offices has orders on hand for 800 experienced and inexperienced bushmen. The Sault Ste. Marie office also is calling for woods labour of all types, and another thousand loggers could be used in the Timmins area.

Hard Rock Mining.—The producing gold mines are not only increasing their output but have begun extensive development which will call for many skilled and unskilled workers in the spring. The Toronto office is able to meet all orders except those for

diamond drillers. Twenty experienced machine runners are needed immediately in the Kirkland Lake area. Operators in the gold fields are hiring only ex-servicemen as beginners, until after the last of the troops have returned from overseas. It is expected that in April there will be increased activity in the Cobalt silver mines, with an accompanying demand for underground labour.

Manufacturing.—Normal labour activity in Ontario's heavy industries is contingent on the regularity of deliveries from the United States, where the widespread steel strike was terminated only recently. Throughout the dispute, production was well maintained in Brantford factories, and despite the depletion of stocks no extensive lay-offs occurred. One producer of automobile parts in St. Catharines has already re-opened, recalling more than 400 employees.

Elsewhere in the province, the aftermath of the steel strike is proving more serious. During the last week the Ford Company of Windsor laid off 7,000 workers for an indefinite period. The Steel Company of Canada has laid off 180 workers from its Hamilton plant for a week, and the Holmes Foundry Company of Sarnia has been forced to a temporary staff reduction of 300 men. Various Toronto companies also are reducing their payrolls because of the lack of materials.

The cancellation of government contracts has resulted in the release of 350 to 400 skilled and unskilled workers from several Hamilton plants; these lay-offs, while probably of short duration, have aggravated the local unemployment situation. The completion of various seasonal projects has resulted in the release of approximately 100 persons in the Cornwall area. In other parts of the region, too, there have been staff reductions.

The staffs of gray iron and malleable foundries are steadily expanding. One new establishment at Brantford has added about 400 workers to its payroll since last September. The regional office is carrying on a campaign for experienced foundrymen, which has resulted in 1,350 special interviews and 289 referrals to date. There are outstanding orders for 150 moulders throughout the province.

While the labour situation of the textile mills, clothing factories, and kindred industries has improved somewhat, there are still numerous vacancies for male and female workers, both skilled and inexperienced. Most of the 400 girls urgently needed in Galt are for the local textile plants, and about 200 inexperienced women could also be placed in footwear, pants, and clothes manufacturing establishments in the Trenton area. In New

Toronto there are more than 100 vacancies for female factory workers, which are increasingly difficult to fill. Brampton, Brantford, Cornwall, Dunnville, Guelph, St. Catharines and Stratford share in the pressing demand both for skilled workers and trainees.

Construction.—There is still a brisk demand for bricklayers in all parts of Ontario, and present needs are set at 220. The most pressing calls come from Hamilton, Toronto, Kingston, and Ottawa, where there is a less urgent demand for experienced plumbers, steamfitters, plasterers, and tilers. Building contracts recently awarded and tenders now being called indicate that much commercial and public construction is planned for the season ahead.

Ex-servicemen.—Discharges from the armed forces are increasing steadily, while opportunities for employment are declining. The falling off in job openings in most sections is attributed largely to the effect on Canadian industries of the general labour trouble in the United States. However, employers everywhere are giving preference to ex-servicemen whenever possible.

Prairie Region

Woods Operations.—Heavy snow has seriously retarded cutting operations during the last month and some local offices report that men are leaving the bush in steadily increasing numbers. Hauling operations are progressing satisfactorily for the most part.

Many loggers are still needed in northwestern Ontario, particularly in the Lakehead zone. The Port Arthur office has unfilled orders for about 680 pulpcutters, and many more will be needed if prisoners of war are removed. Teamsters and loaders are easily found. The Fort William office, too, has many unfilled orders for general bushworkers, despite a fair increase in placements.

Loggers and prop cutters, buckers and swamper are still needed in the Blairmore district. Roads which were closed earlier in the month by the heavy snow in the mountains are now open for transportation from the bush to mines and sawmills, and contractors are rushing out materials. While the Edmonton office has sent 400 men to woods operations since February 1, the labour turnover has been fairly heavy. Every type of bush and sawmill worker is needed in the Dawson Creek area.

Coal Mining.—Certificated miners are in continuing demand in the local office areas of Blairmore, Drumheller, Red Deer, Edmonton, and Edson, but in all these localities the lack of housing is a problem. Many ex-

servicemen are returning to the collieries, but as yet few former miners on discharge leave have come back.

Hard Rock Mining.—As spring approaches, there is greater activity in the mining fields of northwestern Ontario. Prospecting and development work are in progress throughout the district, and diamond drill crews are in demand. Lack of housing is still the greatest handicap to placements in the Geraldton-Beardmore area. One mining company in the Port Arthur district is initiating an employee-training program, under which men will not only gain practical experience but also the knowledge necessary to qualify for supervisory work later. The Winnipeg office reports that most operators will hire only experienced miners and machine runners. Companies at The Pas are steadily expanding their staffs, in order to build permanent crews.

Manufacturing.—There has been little change in the general industrial employment picture, and most factories throughout the Prairies are adequately staffed to meet current production. Heavy snows, curtailing the shipment of cattle and hogs to the packinghouses, have resulted in numerous lay-offs. More than 70 employees have been released from the Moose Jaw plant of the Canadian Packing Company and there has also been a small reduction of staff in Saskatoon. The Swift Canadian Company laid off 40 men in Edmonton recently. Although other tradesmen are being released gradually as the Port Arthur shipyards complete their contracts, moulders and pattern makers are still in demand. The Port Arthur office has heavy orders for labourers from out-of-town pulp and paper mills. These mills are reinstating ex-servicemen, as are the flour mills in Kenora and Saskatoon. The Lethbridge sugar mills have completed their run and released many workers.

Some textile mills in the Winnipeg area are asking that their orders be deferred, because of the shortage of materials, but others are calling both for experienced workers and trainees. Local orders for fish and pickle packers are difficult to fill.

Construction.—Greater activity is expected in all parts of the Prairies as soon as the weather moderates. In the meantime small lay-offs of tradesmen and labourers are taking place from time to time and there is a surplus of construction workers in almost every area. One construction company which recently released 40 skilled men and labourers from its Wartime Housing project in Calgary, has started to re-hire some of those laid off in Moose Jaw last fall. Highly qualified tradesmen in several classifications are in demand.

Ex-Servicemen.—The increase in the number of unemployed ex-servicemen registered is attributed in part to the fact that many are applying for out-of-work allowances. However, reinstatements are proceeding at a satisfactory rate, and there is a marked increase in the interest shown by veterans in the various training programs offered, as well as a greater number qualifying for such training.

Pacific Region

Woods Operations.—Heavy snows have hampered bushwork in the higher coastal levels of British Columbia and in the interior of the province. However, despite the forced curtailment of operations on the higher levels, the shortage of skilled loggers is gradually becoming more serious; many unskilled bushmen could be placed if more trained workers were available.

Although many camps in the Kootenay, Okanagan and Prince George areas have been forced to close, releasing some hundreds of loggers, orders for woodsmen in other operations are being placed daily, and are being easily filled by local applicants.

Tree planting has been started in the Pacific Coast area and will continue for about two months, dependent on the weather. The British Columbia Forestry Service and private operators hope to plant approximately 17,000,000 trees this year. Orders for labour for this enterprise have been placed with the Victoria and Courtenay offices and more will follow. While there are enough unemployed men registered to meet requirements, many of them are unwilling to leave home.

Sawmills.—The log shortage resulting from heavy snow and poor towing conditions has forced some mills on the lower mainland to reduce their operations to a 40-hour week. In Vancouver, where this schedule is general, there are many applicants for mill work, but few vacancies. One large mill in Victoria has re-opened after a two-month shutdown; as yet, only the former staff has been recalled, but replacements will be needed for men who have taken jobs elsewhere in the interval.

While there are definite signs of improvement in the employment situation in the New Westminster area, local applicants are sufficient to meet the increasing demand. The recent re-opening of the Hammond Cedar Company's mills after a lengthy shutdown has resulted in the re-engaging of 300 to 400 men, and the company hopes to resume a second shift in the near future. Another local mill has hired 100 men in the last two weeks, and continues to absorb applicants.

Coal Mining.—The shortage of certificated miners persists in all but the Telkwa coal

fields. Few applicants are available, and orders remain unfilled at Fernie, Courtenay, and Nanaimo. The return of ex-coal miners from the armed forces is relieving the acute situation somewhat.

Hard Rock Mining.—The demand for labour remains fairly constant, but not acute. Miners are being placed steadily, but existing conditions at various properties control the speed with which experienced men can be employed to advantage. However, the shortage of skilled miners is retarding production at many operations. Renewed activity in the placer mines of northern British Columbia is expected to absorb many less experienced men.

Manufacturing.—The general industrial employment situation showed little change during the last month. Although a slightly increased demand for semi-skilled and unskilled labour has absorbed a few shipbuilding workers in the Vancouver area, there is still widespread unemployment in the industry. The Victoria shipyards are quiet, but there is some demand for casual labour on jobs of a few days' duration, and highly skilled finishing carpenters can always be placed in the small local yards, which are working full time. Nanaimo shipyards are beginning to reduce their staff of skilled men as the last minesweeper is completed, and lay-offs from the Prince Rupert yards have continued throughout the month.

Following the cancellation of foreign orders, the Heaps Engineering Works of New Westminster has laid off most of its temporary employees and a large number of permanent workers. Only immediate demands in the city are for a few skilled tradesmen. However, the recent purchase of the Canadian Pacific Airlines building by a company manufacturing pre-fabricated houses, promises employment to more than 1,000 persons when reconversion is completed.

Construction.—Lack of materials and adverse weather conditions still hamper construction in all parts of the province. Skilled carpenters of every type are needed in Vancouver, and in Victoria the demand for carpenters, plumbers, and labourers has risen somewhat. Sixty per cent of the carpenters registered for employment in British Columbia are men over 50 years of age, of whom the greater number are more than 60 years old; as a rule these men are interested only in finishing work.

In the interior, there have been extensive lay-offs from Wartime Housing projects at Penticton, and Veterans' Housing work at Vernon has been seriously handicapped by shortage of materials. Highway construction has been halted by heavy snows, and the Campbell-Mannix companies have laid off 130

labourers, who will probably resume work in April.

Ex-Servicemen.—Applications for employment during January remained stationary around the 14,000 mark. While fair progress in placements is being made, limited job

openings make it difficult to place many registrants in suitable positions. Many ex-service women are returning to their former employment or finding their own jobs, while others are taking advantage of educational or vocational training opportunities.

Applications for Employment; Vacancies and Placements: January, 1946

REPORTS received from the National Employment Service Offices of the Unemployment Insurance Commission during the five-week period December 28, 1945 to January 31, 1946, showed a decrease of 26.5 per cent in business transacted when compared with the preceding four weeks November 30 to December 27, 1945 and a loss of 56.8 per cent in comparison with the five weeks December 29, 1944 to February 1, 1945, this computation being based on the average number of placements recorded daily. Under the first comparison, all industrial divisions recorded losses, the most pronounced being moderate reductions in manufacturing, construction and trade. When compared with the five-week period ending February 1, 1945, except for a nominal increase in agriculture all industrial

divisions recorded decreases the most noteworthy being a substantial loss in manufacturing, and moderate declines in forestry and logging, services, trade and public utilities operation.

The accompanying chart shows the trend of employment since January, 1943, as represented by the ratios of vacancies notified and of placements effected for each 100 applications for work registered at Employment Service Offices throughout Canada. It will be seen from the graph that the curve of vacancies in relation to applications took an upward trend while that of placements followed a downward course. The ratio of vacancies to each 100 applications was 69.3 during the five weeks ending January 31, 1946, in contrast with 66.4 during the previous four weeks,

and 90.3 during the five weeks December 29, 1944 to February 1, 1945. The ratio of placements to each 100 applications was 31.3 as compared with 42.4 in the preceding period and 60.8 during the five weeks ending February 1, a year ago.

The average number of vacancies reported daily by employers to the offices of the Commission throughout Canada during the period under review was 4,979 compared with 4,795 during the preceding four weeks and 7,757 in the five weeks ending February 1, 1945. The average number of applications for employment received daily by the offices during the period ending January 31 was 7,184 in comparison with 7,220 in the previous four weeks and 8,594 in the corresponding five weeks, a year ago. The average number of placements made daily by the offices during the five week period ending January 31, 1946, was 2,254 of which 2,057 were in regular employment and 197 in work of one week's duration or less, as compared with a total daily average of 3,067 during the previous four weeks. Placements in the five weeks ending February 1, 1945 averaged 5,224 daily, consisting of 5,081 in regular and 143 in casual employment.

During the period December 28, 1945 to January 31, 1946, the offices of the Commission referred 99,621 persons to vacancies and effected a total of 65,374 placements. Of these the placements in regular employment were 59,649 of which 44,885 were of males and 14,764 of females while casual placements totalled 5,725. The number of vacancies reported by employers was 96,293 for males and 48,108 for females, a total of 144,401, and applications for work totalled 208,346 of which 155,801 were from males and 52,545 from females. Reports for the four weeks ending December 27, 1945, showed 110,275 positions available, 166,070 applications made and 70,547 placements effected, while from December, 29, 1944 to February 1, 1945 there were 224,962 vacancies, 249,213 applications made and 151,490 placements in regular and casual employment.

The following table gives the placements effected by employment offices, each year, from January 1936, to date:—

Year	PLACEMENTS		
	Regular	Casual	Totals
1936.....	217,931	113,519	331,450
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295
1939.....	242,962	141,920	384,882
1940.....	320,090	155,016	475,106
1941.....	316,168	191,595	507,763
1942.....	809,983	58,638	895,621
1943.....	1,890,408	53,618	1,944,026
1944.....	1,693,119	46,798	1,739,917
1945.....	1,445,692	47,889	1,493,581
1946 (5 weeks).....	59,649	5,725	65,374

Prince Edward Island and Nova Scotia

During the five weeks ending January 31, 1946, the daily average of positions offered through National Employment Service Offices in Nova Scotia and Prince Edward Island was 171, in contrast with 214 in the previous period and 258 during the five weeks ending February 1, 1945. The average number of placements effected daily was 96 during the period under review, in comparison with 139 in the preceding four weeks and 201 during the period terminating February 1 last year. A large decrease in manufacturing together with losses much smaller in volume in services, public utilities operations, trade and construction was responsible for the decline in placements from the five weeks ending February 1 a year ago. Placements by industrial groups included: manufacturing 812; services 663; trade 393; public utilities operation 340; forestry and logging 242, and construction 185. There were 1,758 men and 903 women placed in regular employment.

New Brunswick

Orders received at Employment Offices in New Brunswick during the period under review, called for an average of 149 workers daily in comparison with 166 during the four weeks November 30 to December 27, 1945, and 274 in the period terminating February 1 last year. Placements, likewise, were fewer under both comparisons, the daily average being 66, as compared with 106 in the preceding four weeks and 163 during the period terminating February 1, 1945. Reductions in placements in manufacturing, forestry and logging, services, public utilities operation, trade and construction accounted for the decrease in placements from the five weeks ending February 1 a year ago. The declines in the remaining groups were of minor importance only. Placements by industries included: manufacturing 481; services 424; public utilities operation 291; construction 213; forestry and logging 212, and trade 186. Regular placements totalled 1,384 of men and 463 of women.

Quebec

Employment opportunities as indicated by orders received at Employment Offices in the province of Quebec during the period ending January 31, 1946, showed a daily average of 1,335 compared with 1,252 in the previous four weeks and 2,302 during the period ending February 1 last year. There was a daily average of 362 placements in contrast with 510 in the preceding four weeks and 1,392 during the period ending February 1 a year ago. When comparing placements with the five

weeks terminating February 1, 1945, all industrial divisions recorded declines. The most marked reductions were reported in manufacturing, and forestry and logging, followed by substantial losses in services, public utilities operation and trade, with decreases of much smaller proportions in construction, and finance and insurance. Industries in which employment was secured for more than 500 workers included: manufacturing 4,175; services 1,582; forestry and logging 1,412; construction 987; public utilities operation 816; trade 745 and mining 646. Placements in regular employment numbered 8,042 of men and 2,235 of women.

Ontario

There was an increase in the number of positions available daily at Employment Offices in Ontario during the five weeks terminating January 31, 1946, when compared with the period November 30 to December 27, 1945, but a decrease in comparison with the five weeks terminating February 1, 1945; the daily average being 2,050 during the period under review, 1,915 in the previous four weeks and 3,180 during the period ending February 1 last year. Placements decreased under both comparisons, the daily average being 977 during the five weeks under review, in contrast with 1,353 in the period ending December 27, 1945, and 2,230 during the five weeks terminating February 1 a year ago. The heavy reduction in placements from the period ending February 1, 1945, was chiefly attributable to a pronounced decrease in manufacturing supplemented by substantial losses in services, trade, public utilities operation, and forestry and logging. In addition, moderate declines were reported in finance and insurance, mining and construction. Industrial divisions in which most of the placements were effected were: manufacturing 11,252; services 6,494; trade 3,078; construction 2,209; public utilities operation 1,934; forestry and logging 1,908; mining 667 and finance and insurance 601. Regular placements totalled 20,026 of men and 6,578 of women.

Manitoba

The demand for workers on a daily average as indicated by orders listed at Employment Offices in Manitoba during the period ending January 31, 1946, was 247 as compared with 233 in the previous four weeks and 322 during the period ending February 1 a year ago. Placements registered a daily average of 145, in contrast with 186 in the four weeks November 30 to December 27, and 231 during the period ending February 1, 1945. With

the exception of small gains in construction, mining and agriculture placements were fewer in all industrial groups, than during the period ending February 1 last year. The largest reduction was in manufacturing followed by moderate declines in trade, services, public utilities operation, and forestry and logging. Placements by industries included: services 1,368; trade 859; manufacturing 815; public utilities operation 474; construction 249; forestry and logging 132, and mining 124. There were 1,808 men and 1,282 women placed in regular employment.

Saskatchewan

Positions offered through Employment Offices in Saskatchewan during the five weeks under review, averaged 130 daily compared with 132 in the preceding period and 172 during the five weeks terminating February 1, 1945. The average number of placements recorded daily was 67, in comparison with 98 in the previous four weeks and 128 during the period terminating February 1 a year ago. When comparing placements by industrial groups with the five weeks ending February 1 last year, the most significant changes were moderate losses in services, manufacturing, trade, public utilities operation, and forestry and logging. Changes in all other groups were small. Placements by industrial divisions included: services 915; trade 353; manufacturing 165; public utilities operation 158 and construction 143. Placements in regular employment numbered 992 of men and 588 of women.

Alberta

Orders listed at Employment Offices in Alberta during the period terminating January 31, 1946, called for a daily average of 266 workers, in contrast with 293 in the previous four weeks and 331 during the period terminating February 1 last year. There was a daily average of 162 placements compared with 219 in the preceding four weeks and 237 during the five weeks ending February 1, 1945. Placements under services, trade, manufacturing and public utilities operation were less numerous than those of the period ending February 1 a year ago, and accounted for the fairly substantial decrease for the province as a whole under this comparison. Industrial groups in which the majority of placements were effected were: services 1,424; manufacturing 763; forestry and logging 663; trade 513; public utilities operation 392; construction 376; mining 302 and agriculture 227. Regular placements totalled 3,067 of men and 932 of women.

British Columbia

Opportunities for employment at Offices in British Columbia during the five weeks December 28, 1945 to January 31, 1946, numbered 631 daily in comparison with 589 in the preceding period and 919 during the five

weeks ending February 1 a year ago. Placements showed a lower average during the period under review, being 378 daily in contrast with 458 in the previous four weeks and 640 during the five weeks ending February 1 last year. The decrease in placements

from the five weeks terminating February 1, 1945, was mainly due to substantial losses in manufacturing and services, although fairly large declines occurred in forestry and logging, trade and public utilities operation. Of the changes in all other groups a moderate gain in construction and a loss in finance and in-

surance were the most important. Placements by industries included: services 3,066; manufacturing 2,229; forestry and logging 1,701; construction 1,431; public utilities operation 992; trade 984 and mining 366. There were 7,808 men and 1,783 women placed in regular employment.

Report on Operations of the National Employment Service Offices During 1945

OPERATIONS of the National Employment Service offices during 1945 were slightly less in volume than during the previous year. Although the labour needs of war industries were sharply curtailed during the last quarter of

1945, this was largely offset by the increased demands of the long understaffed civilian industries. The overall decrease in vacancies notified is reflected in a decline in the number of placements made during the past year.

From December 29, 1944 to December 27, 1945, applications for employment numbered 2,516,984; this was 31,701 more than in 1944. Vacancies recorded at employment offices in Canada, however, showed a decrease of 307,523, totalling 2,421,248 in 1945. All industry groups reflected this decline with the exception of the rapidly expanding mining and construction industries. The sharp drop in the number of vacancies notified in the manufacturing group accounted for 71 per cent of the overall decrease. It is significant that vacancies reported for male workers declined by less than 3 per cent, while job opportunities for women decreased by 28 per cent.

Placements made by National Employment Service offices during 1945 totalled 1,493,581 as compared with 1,739,917 in 1944. The decline in placements effected, as in vacancies notified, was apparent in all industry groups except mining and construction.

The following tables summarize the monthly and quarterly reports published in previous issues of the LABOUR GAZETTE. Table I shows vacancies notified and placements effected by industry and by province, for the year 1945, as reported by the National Employment Service. Table II shows the operations of the National Employment Service by local office for the year, December 29, 1944 to December 27, 1945.

Legal Decisions Affecting Labour

British Columbia Court Rules Officers of Boilermakers' Local Improperly Removed

The British Columbia Supreme Court on December 6, 1945, dismissed with costs an action brought by the newly elected officers of the Boilermakers' and Iron Shipbuilders' Union of Canada, Local No. 2, for a declaration that they were the officers of the union and that the defendants, their predecessors in office, had been properly removed from office. Mr. Justice Macfarlane held that

the defendant officers were not properly removed and that of itself makes it impossible for the plaintiffs to have been elected to the offices which they claim to hold, but in any event . . . the plaintiffs could not have been properly elected.

The defendants had been ousted by the executive committee of the Shipyard General Workers' Federation of British Columbia with which Local 2 affiliated in March, 1944. In March, 1945, the executive committee of the Local, acting upon authority received from the Local itself, decided to suspend payment to the Federation of the monthly capitation tax and to cease sending it monthly membership reports. No payments or reports were made after February, 1945.

Subsequently a referendum was held in June, 1945, on the question of whether the Local should secede from the Federation, but the motion to secede failed to receive the requisite two-thirds of the votes. Later in the month the Local's charter was suspended by the Federation executive. In August, the Local officers were summoned to a meeting of the Federation executive. Two attended, and were asked to pledge support and obey the Federation's constitution. Both denied violating the constitution and stated that as officers of the Local they were governed by that body. The Federation executive, however, voted to remove them from office, claiming that they had violated several clauses of the constitution.

The August meeting of the Local broke up, and the rival factions then met simultaneously. At one meeting the defendant officers were replaced by the plaintiffs. At the Federation's convention in October the acts of its executive were approved and the seating authorized of eight delegates from the Local, members of the plaintiffs' group.

Mr. Justice Macfarlane cited the article of the Federation's constitution which reads:—

Any officer or member who makes false returns to the General Office knowingly shall be tried by the Executive Committee and, if proven guilty, shall be fined, suspended or expelled from the Federation.

Any officer of a Local Union who, through negligence by failing to send in monthly reports to the general office, thus permitting the Local Union to become suspended, thereby jeopardizing the benefits of the members of the same, shall be immediately removed from office and not be eligible to hold any office within the gift of any Local Union for a period of two years from the date of removal.

He held, contrary to the argument of plaintiffs' counsel, that the word "immediately" does not mean *ipso facto*. In his opinion, before the ousting, there should have been a charge of negligence, a hearing on that charge and a decision made. He stated:—

The reports were not sent in because of the decision of the local union itself . . . negligence in these circumstances I think involves an idea quite different from the action of men who do what they do under the authority of a vote of the members and as a result of their deliberate judgment as to what is best in the interests of the union they represent.

Referring to the action of the Federation convention and the clause of the constitution which reads

In the event that a dispute arises regarding the interpretation of the Constitution, the decision of the officers of the Executive Committee shall be the decision of the Federation, subject to appeal to the next convention,

the Court observed that this—

does not mean that the executive of the federation may do what they please irrespective of the provisions of the constitution, and then come to the Court and say that they have decided what the powers are and that the convention has approved them, and that, therefore, the Court has nothing to say about it. It certainly does not mean, that rights not given by the constitution of the federation which has been adopted by the locals may be over-ridden simply by the convention declaring that they shall be so. *Smith et al v. Cardwell et al* (1946), 1 Western Weekly Reports 78.

Winnipeg Restaurant Operator's Appeal Dismissed—Convicted of Debauching Girl Employee

In the Manitoba Court of Appeal, on January 21, 1946, the appeal of a restaurant operator convicted by a Judge of the Winnipeg Juvenile Court of contributing to juvenile delinquency, whose conviction was

affirmed by Mr. Justice Donovan of the Court of King's Bench, was dismissed and the sentence increased from three months with \$500 fine to two years without fine.

The charge was laid under the Juvenile Delinquents Act, 1929, sec. 33:—

that he did . . . knowingly or wilfully do an act or acts producing, promoting or contributing to . . . a child, being or becoming a juvenile delinquent, or likely to make the said child a juvenile delinquent.

A juvenile is defined in the Act as a child under 16 years of age or, if the proclamation declaring the Act in effect in any area so stipulates, under 18 years of age. In Manitoba, the Act applies to those under 18. Only in Alberta is the employment in restaurants of girls under 18 prohibited and in that province it is permitted with the parent's consent.

The accused and his brother operate a number of Winnipeg cafés, known as the Silver Grill, employing a number of girls as waitresses and cashiers, many of them juveniles. The juvenile involved came from the country to work for the accused. The evidence of six girls, called as witnesses for the Crown, showed that the accused used his authority to debauch his employees, if he could do so, or else discharged them. The Court of Appeal was satisfied that the accused over a period of years "used his position to compel the girls to submit to his sexual desires".

Evidence showed that the accused was a single man who had frequently registered at a hotel with a woman as his wife. Subsequently he had kept the same room continuously, and on numerous occasions for two years he had brought girls there. The evidence was so similar that it established a planned method and system of debauchery.

The appeal was based on the argument that evidence of similar offences by the accused was improperly admitted at the trial. Chief Justice McPherson held that there was ample evidence to warrant conviction even without taking into account any of the evidence objected to, but he declared further that on such a charge the whole background of conditions under which a juvenile worked was proper evidence.

Mr. Justice Dennistoun held, too, that the evidence of similar offences was not only admissible but relevant. With this opinion Mr. Justice Richards agreed. The accused might have been charged as an employer under the Criminal Code with the seduction of an employee, in which case the Court would have been restricted to the investigation of a single crime to the exclusion of other offences. But he was prosecuted in the Juvenile Court, which is a Court of morals as well as a Court of law. In this case the moral character of the

accused had a direct bearing on the charge laid in respect to a single act. *Rex v. Christakos*, (1946) 1 Western Weekly Reports 166.

Picket at Ford Company Plant Given Suspended Sentence

On January 10, 1946, in Essex County Court, Judge E. A. Shaunessy found a picket at the plant of the Ford Motor Company guilty of besetting and watching the premises contrary to Section 501 (f) of the Criminal Code. The accused was given a year's suspended sentence, ordered to pay the costs, to post a \$500 bond, to keep the peace and to report to the Chief Constable of Windsor once each month during the next year.

Section 501 of the Criminal Code reads in part:

Everyone is guilty of an offence punishable on indictment or on summary conviction . . . who, wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do or to do anything from which he has a lawful right to abstain, . . .

(f) besets or watches the house or other place where such other person resides or works or carries on any business or happens to be;

(g) attending at or near or approaching to such house or other place as aforesaid, in order merely to obtain or communicate information, shall not be deemed a watching or besetting within the meaning of this section.

The accused, a picket captain, was charged with ordering the pickets to prevent an office worker entering the plant on September 17, 1945. When asked by the Deputy Chief Constable to open up the picket line to permit the man to pass, the accused had told the constable to talk to the pickets himself, and there was evidence that he had told the men to close their ranks and keep walking.

Judge Shaunessy observed:—

I can see nothing wrong with a member of a picket line using peaceful persuasion on an employee about to enter his employer's premises to work, but, if force is used, or if any threat or threatening gesture is made, or if access to the premises is blocked by a member, such act is wrongful and without lawful authority, and a besetting or watching within the meaning and intent of Section 501 (f) of the Criminal Code . . .

While the accused did not, personally, block access, he counselled or procured others to do so, and is equally guilty. *Re v. Russell N. Carruthers*, Essex County Court, January 10, 1946.

House of Lords Allows Appeal of Railway Company in Accident Case

The House of Lords by a 3 to 2 decision on January 21 allowed the appeal of the London and North-Eastern Railway Company from a

decision of the Court of Appeal awarding £1,500 damages to the plaintiff, the widow of a signal-fitter who had been killed by a train while oiling signal connections for the company (L.G. 1945, p. 1846). The Lord Chancellor and Lord Wright dissented.

The widow, in her action under the Fatal Accidents Act, had alleged a breach of a statutory duty on the part of the company since by the Railway Employment Prevention of Accident Rules, 1909, it was required to provide a good look-out for men at work "relaying or repairing the permanent way". The company at the trial had contended successfully that signal-fitters were not permanent way men and that the deceased had not been relaying or repairing the permanent way but oiling signal connections. The Court of Appeal, however, had reversed this decision, holding that "permanent way men" referred to men working in a place which was part of the permanent way and not to any technical division of classes of workmen which might be made by the company for its own convenience. The Court of Appeal held, too, that the deceased had been doing "repairing" work, since the word meant "maintaining in a state of efficiency".

The Lord Chancellor and Lord Wright agreed with the Appeal Court, but the three other members disagreed. Lord Porter and Lord Simonds held that the deceased was not engaged in "repairing" the permanent way while Lord Macmillan stated that, even if it was conceded that the deceased was working on "the permanent way", and he was not prepared to accept the limited sense in which the company used the word, he could not hold that he was "repairing" it since the work of oiling and cleaning could not be characterized as a work of repair. *London and North-Eastern Railway Company v. Berriman*. The Times Law Report, January 21, 1946.

English Court of Appeal Holds Employer Liable for Injury Resulting from Breach of Safety Rules

Allowing the appeal of an injured workman, the Court of Appeal on July 13, 1945, ruled that if there was a breach of a safety provision imposed on an occupier of a factory and a worker was injured in a way which would result from the breach, the onus of proof shifted to the occupier to say that the breach was not the cause. The case was reported in the *Ministry of Labour Gazette*, November, 1945.

The workman, a wood-carver, had often operated during the war a circular saw, but he was not a skilled operator and had not been

taught how to set and adjust the guard. The workman, named Vyner, lost part of a thumb and had his index finger cut by the saw. He brought an action for damages for personal injuries sustained as a result of a breach of statutory duty by his employers.

The trial judge found that the guard was kept at a height of 3½ inches contrary to Regulation 10 (c) of the Woodworking Machinery Regulations, 1922, which stipulates:—

The top of the saw shall be covered by a strong and easily adjustable guard with a flange at the side of the saw farthest from the fence. The guard shall be kept so adjusted that the said flange shall extend below the roots of the teeth of the saw. The guard shall extend from the top of the riving knife to a point as low as practicable at the cutting edge of the saw.

The riving knife, it was also found, was not "strong, rigid and easily adjustable" as required by the Regulations, and the defendants had never expressly delegated to Vyner or anyone else the duty of maintaining the guard at the proper level or of adjusting it to enable the work to be carried on without "unnecessary risk" as required by Regulation 21.

The defendants alleged contributory negligence but here, too, the trial judge found in the plaintiff's favour. The plaintiff, he believed, was using the "double cut" method which was the right one, and not the "single cut" method as alleged. It was not known exactly how the accident occurred and the trial judge dismissed the plaintiff's claim.

The Court of Appeal, while accepting the trial judge's finding of fact, held (in the words of the Gazette summary):—

that if there was a definite breach of a safety provision imposed on an occupier of a factory and a worker was injured in a way which would result from the breach, the onus of proof shifted to the occupier to say that the breach was not the cause. They thought that this principle lay at the very basis of statutory rules of absolute duty.

The Court came to the conclusion that nothing short of a definite delegation of authority and duty in regard to maintenance to a person properly qualified and instructed could absolve the occupier from his duties under Regulations 10 and 21. If there had been any real but unexpressed delegation of authority to the plaintiff to perform the defendants' statutory duties, there would certainly have been some reprimand of him for not seeing that those duties were properly performed. The truth was that the defendants did not take the trouble to ascertain what kind of guard was required by the statutory rules or did not care whether they were broken. If so, it would be absurd to draw an inference that their responsibility had in the present case been shifted by delegation on to the shoulders of the plaintiff. *Vyner v. Waldenberg Brothers Limited*, Court of Appeal, July 13, 1945.

Strikes and Lockouts

Strikes and Lockouts in Canada During February, 1946

DURING February, strike activity in Canada continued at a low level. As compared with the previous month, there was a slight increase in the number of strikes recorded and in the number of workers involved, but the time loss in man-working days declined. Preliminary figures show 18 strikes in existence during February, 1946, involving 3,532 workers, with a time loss of 12,406 days, as compared with 12 strikes in January, 1946, involving 2,935 workers, with a time loss of 20,593 days. In February, 1945, there were 17 strikes, involving 5,023 workers, with a time loss of 6,656 days.

Preliminary figures for the first two months of this year show 28 strikes, involving 6,312 workers, with a time loss of 32,999 days, as compared with 33 strikes, involving 10,464 workers and a time loss of 38,593 days, for the same period last year.

Of the 18 strikes recorded for February, three resulted in favour of the workers, three

in favour of the employers, two were compromise settlements and one was indefinite, work being resumed pending final settlement. At the end of the month there were nine strikes recorded as unterminated, namely: compositors, etc., at Winnipeg, Man., bakery workers at Halifax, N.S., clothing factory workers at Montreal, P.Q., hosiery mill workers at Sherbrooke, P.Q., electrical apparatus factory workers at Brockville, Ont., and Montreal, P.Q., metal factory workers at Niagara Falls, Ont., farm implement factory workers at London, Ont., foundry workers at Smiths Falls, Ont., and electrical apparatus factory workers at Toronto, Ont.

The record does not include minor strikes such as are defined in another paragraph, nor does it include strikes as to which information has been received, indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated.

STRIKES AND LOCKOUTS IN CANADA, JANUARY-FEBRUARY, 1945-1946†

Date	Number of Strikes and Lockouts		Number of Workers Involved		Time Loss

* Preliminary figures. ‡ Strikes unterminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1946⁽¹⁾

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars ⁽²⁾
	Establish- ments	Workers		

Strikes and Lockouts in Progress Prior to February, 1946

MANUFACTURING— <i>Vegetable Foods—</i> Flour mill workers, Seaforth, Ont.	1	35	150	Commenced January 22; for increased wages following reduction in hours from 10 to 8 per day; terminated February 12; return of workers and replacement; in favour of employer.
<i>Printing and Publishing—</i> Compositors, etc., Winnipeg, Man.	2	120	2,500	Commenced November 8; for a new agreement providing for increased wages and other conditions; untermiated.

Strikes and Lockouts in Progress During February, 1946

MANUFACTURING— <i>Vegetable Foods—</i> Bakery workers, Halifax, N.S.	1	40	640	Commenced February 11; for a union agreement; untermiated.
<i>Textiles, Clothing, etc.—</i> Hosiery mill workers, Sherbrooke, P.Q.	1	400	700	Commenced February 5; for increased wages; terminated February 6; return of workers; indefinite, <i>see</i> strike February 18.
Clothing factory workers, Montreal, P.Q.	1	(³) 26	350	Commenced February 13; against dismissal of two workers allegedly for union activity; untermiated.
Hosiery mill workers, Sherbrooke, P.Q.	1	(⁴) 480	4,800	Commenced February 18; for increased wages; untermiated.
<i>Metal Products—</i> Foundry workers, Sackville, N.B.	1	(⁵) 22	55	Commenced February 11; for revision of piece-work schedule; terminated February 13; negotiations; compromise.
Electrical apparatus factory workers, Hamilton, Ont.	1	(⁶) 192	24	Commenced February 13; for a new agreement providing for increased wages, reduced hours, check-off, etc.; terminated February 13; return of workers; in favour of employer.
Automotive parts factory workers, Oshawa, Ont.	1	85	45	Commenced February 13; alleged discrimination in dismissal of two workers; terminated February 13; negotiations; in favour of workers.
Silverware factory workers, Toronto, Ont.	1	(⁷) 48	48	Commenced February 14; against discharge of a worker for infraction of company rules; terminated February 14; conciliation, provincial; in favour of workers.
Electrical apparatus factory workers, Brockville, Ont., and Montreal, P.Q.	2	926	2,300	Commenced February 19; for a new agreement providing for closed shop, increased wages, reduced hours, etc.; untermiated.
Metal factory workers, Niagara Falls, Ont.	1	(⁸) 33	100	Commenced February 25; for a union agreement providing for union shop, check-off, etc.; untermiated.
Electrical apparatus factory workers, Georgetown and Leaside, Ont.	2	800	200	Commenced February 26; for a new agreement providing for union shop, increased wages, reduced hours, etc.; terminated February 28; return of workers; in favour of employers.

Strikes and Lockouts in Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing up to date that given in the March, 1945, issue in review "Strikes and Lockouts in Canada and Other Countries". The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the various countries for which such figures are available, but many countries are no longer reporting, due to unsettled conditions following the war. Statistics given in the annual review and in this article are taken as far as possible from the government publications of the various countries concerned.

Great Britain and Northern Ireland

The British Ministry of Labour Gazette publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in December, 1945, was 130, and 21 were still in progress from the previous month, making a total of 151 during the month. There were 21,600 workers involved and a time loss of 87,000 working days was caused.

Of the 130 stoppages which began during December, 11 arose out of demands for advances in wages; 46 over other wage questions; six on questions as to working hours; eight on questions respecting the employment of particular classes or persons; 54 on other questions respecting working arrangements; three on questions of trade union principle; and two were in support of workers involved in other disputes.

Australia

Preliminary figures for the second quarter of 1945 show 226 work stoppages. The number of workers involved, both directly and indirectly, was 69,476 and the time loss was 261,716 work days.

United States

Preliminary figures for January, 1946, show 325 strikes and lockouts beginning in the month, in which 1,400,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 19,200,000. Figures available for December, 1945, show an estimated time loss of 7,500,000 man days.

Strikes and Lockouts in Canada During 1945

THE number of strikes and lockouts in existence in Canada during 1945 was about the same as in 1944 but was lower than in any of the preceding three years. The number of workers involved, while somewhat greater than in 1944, was less than one-half the number in 1943 and materially lower than in 1942. The loss of working time was much greater than in any recent year and was about three times the loss in 1944.

During the year the number of strikes and lockouts was 197, in which 96,068 workers were involved, and a time loss of 1,457,420 man-working days was caused. During 1944, the number of strikes was 199, involving 75,290 workers, with a time loss of 490,139 days.

About 33 workers in every 1,000 were involved in strikes during 1945, as compared with 25 in 1944; 72 in 1943; 39 in 1942; 33 in 1941; 27 in 1940; and 20 in 1939.

The total amount of idleness due to strikes in 1945 was about one and two-thirds days in every 1,000 days of working time. Comparative figures are: 1944, one-half day; 1943, 1.1 days; and for each of the two preceding years about one-half day.

The great majority of strikes were settled within a few days and while these involved a large proportion of the workers, the time loss was not substantial. Fifty-eight strikes were of one day's duration or less. One hundred and fifty-two, or more than three-quarters of the total, were of less than five days' duration and caused only five per cent of the total time loss. On the other hand, one strike, involving 10,000 workers in the manufacture of motor vehicles at Windsor, Ont., was in progress from September 12 to December 29. This strike alone caused more than 900,000 days of time loss and with the resulting sympathy strikes, more than one million days were lost. Another strike of coal miners in Alberta and British Columbia, which did not involve any dispute with the employers but was in protest against meat rationing, increased the time loss by 150,000 man-days. A total loss of more than 1,200,000 days resulted from these two strikes.

During recent years more idleness has resulted from strikes in manufacturing than in all other industries. In this group, which has experienced a great expansion in employment since 1939, 85 per cent of the total time loss occurred. Strikes in coal mining caused about 13 per cent of the idleness due to strikes in 1945. In nine of the years between 1901 and 1925, more lost time resulted from strikes in this industry than in all others combined. Since 1925 this condition has occurred in only one year.

Questions involving increases in wages caused about 25 per cent of the strikes during the year but the resulting time loss was less than five per cent of the total. Under present legislation demands for increases in wages must be referred to the National or Regional War Labour Boards.

Since the passing of the Wartime Labour Relations Regulations in 1944, recognition of the union has not been an important cause of strikes. Union questions of various kinds, including demands for closed or union shop, maintenance of membership, check-off, etc., caused 39 strikes, which resulted in about two-thirds of the time loss during the year.

The settlement of 100 strikes during the year was brought about by various government agencies. Forty-seven were settled by conciliation alone and this was a factor in securing settlements in 34 additional strikes which were referred to various Boards or to arbitration.

Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the *LABOUR GAZETTE* each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each strike. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the *LABOUR GAZETTE* are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada, 1901 to 1912", issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the *LABOUR GAZETTE* have brought the lists of strikes and lockouts and analytical tables down to date each year.

The annual review for 1930 appearing in the *LABOUR GAZETTE*, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.

The record of the Department includes lockouts as well as strikes but a lockout, or an

industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical tables, therefore, strikes and lockouts are recorded together.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Strikes of less than one day's duration and those involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such strikes involving less than 10 days' time loss is maintained in the Department. During 1945 there were 11 such strikes involving 291 workers and causing a time loss of 56 man days. In 1944,

eight were recorded involving 388 employees and causing a loss of 39 days.

In Tables I and X the number of employers involved is given. In strikes which involve large numbers of shops or factories, clothing, fur, furniture, etc., or building construction jobs, logging and fishing operations, etc., only the approximate number of employers is usually reported.

The figures in this report are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is not always possible to secure exact information but the estimate

LOSS IN MAN-WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR 1914-1945

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBER OF WORKERS INVOLVED EACH YEAR 1914-1945

made in such cases is the result of painstaking methods in the collection of data, and it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees directly involved from time to time so far as known. The number of employees recorded for each strike is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In recent years, when the information was available, the numbers indirectly affected, if important, have been shown in footnotes to Table X, which is a detailed list of the strikes and lockouts during the year. The workers indirectly affected in each strike are those in the establishment who are unable to continue work because of the stoppage but not participating in the strike.

Charts

The accompanying charts show the results of strikes and lockouts according to the numbers of workers involved and the time loss in man-working days by groups of industries each year, for the period of 1914 to 1945.

Analysis of Statistics, 1945

In the following paragraphs is given an analysis of the statistics of strikes and lockouts in Canada as shown under the various headings in the Tables I to X. In this discussion the word "strikes" is used for convenience in place of "strikes and lockouts".

Principal Statistics Since 1901, Table I.—This table is a summary of the principal statistics for the period for which the record has been compiled, beginning in 1901. The table shows the number of strikes and lockouts beginning in each year, and the number in existence during the year, the difference in each case being the number carried over at the end of the previous calendar year. The approximate number of employers involved in all strikes, as well as the number of workers involved, and the time loss, is given. In addition to these data, the number of strikes in existence during each year in coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few strikes in coal mining in some years account for a large proportion of the workers involved and for a still larger proportion of the resulting time loss.

Workers Involved, Table II.—This record for the year shows that nearly 50 per cent of the strikes had fewer than 100 workers in

each case. The total number of workers involved in this group was only about four per cent of the number of workers in all strikes, and caused slightly more than one per cent of the total time loss. Another 40 per cent of the strikes, 79 in number, involved between 100 and 1,000 workers in each case. The total number of workers in these, slightly more than 25,000, was about 27 per cent of the total number in all strikes. The resulting time loss was only 6.2 per cent of the total. Thus 88 per cent of the strikes involved about 30 per cent of the workers and resulted in 7.3 per cent of the idleness due to strikes, while the other 12 per cent of the strikes, those involving more than 1,000 workers in each case, caused nearly 93 per cent of the idleness or more than 12 times the loss in all the other strikes.

Time Loss, Table III.—An analysis of strikes by the resulting time loss, shows that in two-thirds of the strikes during 1945, the loss was less than 500 man-days in each.

The total loss of time in this group was only 1.3 per cent of the loss in all strikes and the number of workers involved 12.6 per cent of the total number. Ten strikes, each of which caused more than 10,000 man-days of loss, involved 41.5 per cent of the total number of workers and caused more than 90 per cent of the idleness from strikes during the year. Three of these, each with a loss of more than 50,000 days, involved more than one-quarter of the workers in all strikes and caused 83.8 per cent of the total loss of time. One strike caused more than 900,000 man-days of lost time or more than 60 per cent of the total.

Duration, Table IV.—More than three-quarters of the strikes during 1945 were settled within five days. These involved more than one-half the workers who were on strike during the year but the time loss was only about five per cent of the total. Another 10.7 per cent lasted between 5 and 10 days; 3.6 per cent between 10 and 15 days; 1.5 per cent between 15 and 20 days; and 2.5 per cent between 20 and 25 days. Only five strikes, 2.5 per cent of the total number, lasted more than 25 days each but these involved slightly more than 18 per cent of the workers in all strikes and caused nearly three-quarters of the time loss.

By Provinces, Table V.—More strikes were recorded in Ontario than in any other province. Seventy-one strikes, 36 per cent of the total, which involved more than 46 per cent of the workers, and 80.6 per cent of the total loss of time, occurred in this province. Most of this time loss was due to a few strikes, including that of workers in the Ford plant at Windsor and the resulting sympathy strikes. Thirty-eight work stoppages were

recorded in Quebec and 35 in Nova Scotia. These accounted for 2 per cent and 2.4 per cent, respectively, of the total time loss. More than one-half the strikes in Nova Scotia occurred in coal mining. Seventeen strikes were recorded in Alberta and 10 in British Columbia, but these did not involve large numbers of workers nor cause great time loss. However, an interprovincial strike, involving 9,000 coal miners in these two provinces, caused more than 10 per cent of the total time loss in Canada due to strikes. No strikes were recorded in Prince Edward Island. There were only two recorded in Saskatchewan and one in the Northwest Territories. Eleven strikes were recorded in Manitoba, which accounted for only .4 per cent of the total time loss.

Industries, Table VI.—During recent years strike activity has been greater in the manufacturing group of industries than in all others combined. In nine of the years between 1901 and 1925 more idleness resulted from disputes in coal mining than in all other industries but this has been the case in only one year since that time, namely in 1932. These two industries combined accounted for about 85 per cent of the total number of strikes, about 95 per cent of the workers involved, and 97.6 per cent of the idleness resulting from all strikes during 1945.

Strikes in the manufacturing group alone numbered 126, or about two-thirds of the total number. These also involved about two-thirds of the workers in all strikes and caused 85 per cent of the total time loss. By far the most important strike of the year occurred in the manufacture of motor vehicles. This strike involved 10,000 workers and caused a loss of 915,000 man-days. The time loss from this strike and resulting sympathy strikes amounted to more than one million days. Other strikes in this group which caused substantial idleness were: bakery workers at Toronto; two strikes in the manufacture of tires at Toronto and Kitchener; meat packing plant workers at Toronto and sympathy strikes in other packing plants. Very few strikes were recorded in ship-building, indicating a marked improvement in industrial relations as compared with the two preceding years, in each of which 10 and 15 per cent of the total time loss was recorded in this industry.

There were no important strikes during the year in mining, other than in coal mining. One strike of coal miners in Alberta and British Columbia involved 9,000 workers and caused about 10 per cent of the loss in all industries during the year.

The only strike of importance in transportation and public utilities involved 2,500

street and electric railway employees in Vancouver, Victoria and New Westminster, B.C., and caused 24,500 days of lost time.

Seven strikes were recorded in construction, four in trade, and six in service, while there was none recorded in agriculture, logging, fishing and trapping, or in finance.

Causes and Results, Table VII.—About one-quarter of the strikes during 1945 were caused by demands for increases in wages. This is about the same proportion as in each of the two preceding years. The 50 strikes caused by wage questions involved a total of slightly more than 15,000 workers, about one-sixth of the number in all strikes, and caused more than 65,000 days of idleness or about 4.5 per cent of the total during the year. The workers obtained their demands in 13 cases, they made compromise settlements in 18 cases, while in 17 cases they were unsuccessful. Under P.C. 9384, all demands for increases in wages and in connection with vacations with pay must be referred to National or Regional War Labour Boards.

About one-third the total number of strikes were included in the category "other causes affecting wages and working conditions". The resulting time loss was only a small fraction of the total.

Union questions of various kinds caused 39 strikes or about one-fifth of the total number. The resulting time loss was about two-thirds of the total, as it included the strike of motor vehicle workers at Windsor, Ont., for union shop, check-off, etc. In 12 cases the workers obtained their demands but were unsuccessful in 10, while in nine others the settlement was a compromise or a partial success for the workers.

The nine sympathy strikes include those in connection with meat packing plant workers at Toronto and with the strike of motor vehicle workers at Windsor, Ont. The five strikes listed as "unclassified" as to cause include that of 9,000 coal miners in Alberta and British Columbia in protest against meat rationing.

Of the total of 197 strikes during 1945, the workers achieved their demands in 38 cases, a compromise settlement was arrived at in 51 cases, while in 95 others they were unsuccessful. Ten strikes were indefinite in result and three were unternminated at the end of the year.

Industries and Methods of Settlement, Table VIII.—The settlement of 100 strikes during the year, involving about 42,000 workers, was obtained through various government agencies, federal and provincial, that is through government conciliation, by reference to Labour Boards, Labour Courts, arbitration, etc. Of these 100 strikes, 47 were

settled by conciliation, federal in 21 cases and provincial in 25. Thirty-nine were referred to War Labour Boards, Labour Courts, etc., and 14 were settled by arbitration. In the 53 cases referred to various boards for final settlement, work was resumed following federal conciliation in eight cases, provincial conciliation in 25 cases and direct negotiations between the parties in five cases.

Conciliation was a factor in the settlement of 81 strikes during the year, of which 29 were federal, 50 provincial and two were municipal.

Thirty-three strikes were settled by direct negotiations; 59 by the return of workers, two by replacement, and three were un-terminated at the end of the year.

TABLE I.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1945

Year	Number Beginning During the Year	Strikes and Lockouts in Existence During Year									
		All Industries			Coal Mining			Industries other than Coal Mining			
		Number of Strikes and Lock- outs	Number of Em- ployers	Number of Workers Involved	Time Loss in Man- Working Days	Number of Strikes and Lock- outs	Number of Workers Involved	Time Loss in Man- Working Days	Number of Strikes and Lock- outs	Number of Workers Involved	Time Loss in Man- Working Days

* In this table figures for strikes and lockouts extending over the end of the year are counted more than once.

† Two protest strikes in Nova Scotia involved workers in various industries. The figures in these two totals do not add up to the number of strikes for the year, namely 402.

TABLE II.—STRIKES AND LOCKOUTS, 1945, BY NUMBER OF WORKERS INVOLVED

Number of Workers Involved	Strikes and Lockouts		Workers Involved		Time Loss	
	Number	Per Cent of Total	Number	Per Cent of Total	Man-Working Days	Per Cent of Total
Under 10.....	7	3.5	53	.0	152	.0
10 and under 50.....	54	27.4	1,452	1.5	5,971	.4
50 and under 100.....	33	16.8	2,273	2.4	10,053	.7
100 and under 500.....	62	31.5	12,982	13.5	55,272	3.8
500 and under 1,000.....	17	8.6	12,908	13.4	35,185	2.4

Total.....	197	100.0	96,068	100.0	1,457,420	100.0

* One strike in Alberta and British Columbia involved 9,000 coal miners and caused a time loss of 150,000 days; one strike in Ontario, Manitoba, Saskatchewan, Alberta and British Columbia involved 5,527 meat packing plant workers and caused a time loss of 18,350 days.

Months, Table IX.—Strike activity is often less during the first few months and the last few months of the year than during the intervening period. During 1945, the largest number of strikes in existence in any month occurred in July and August, with 27 each, and the smallest number in June and December, with 13 each. The number of workers involved in strikes in existence in

any month was greatest in November and smallest in June. The time loss was more than 400,000 days in both October and November but only slightly more than 5,000 days in June.

Table X.—The list of strikes and lockouts in existence during the year is recorded, with details as to causes, results, dates of commencement and termination, etc.

TABLE VI.—STRIKES AND LOCKOUTS, 1945, BY INDUSTRIES

Industry	Strikes and Lockouts		Workers Involved		Time Loss

* During the year the total time loss in all strikes listed due to workers indirectly affected, that is workers in the plant made idle because of the strike, amounted to about 38,000 days. Workers in other plants who may have been indirectly affected are not included. The following list shows the number of workers indirectly affected in each case:

1	57	13	110	23	814	34	37

Strikes and Lockouts in Canada and Other Countries, 1945

THE accompanying table gives available information as to strikes and lockouts in certain countries since 1919, as compared with Canada, showing the number of strikes and lockouts, the number of workers involved and the time loss in man-working days. The countries included this year are restricted to those for which additional information has been received since publication of the yearly strike article in the LABOUR GAZETTE for March, 1945, p. 408. Throughout the year the latest available figures for each country are given in a monthly article in the LABOUR GAZETTE. The last extensive review of strikes and lockouts in Canada and other countries, many of which are no longer reporting due to war conditions, was given in the LABOUR GAZETTE for March, 1940, p. 234.

In the different countries variations occur in the definition of strikes and lockouts and in the methods of compilation of statistics. In some countries figures as to strikes and lockouts are counted separately, but where possible, they have been included together in the table here given. In some cases the number of strikes and lockouts shown for the year is the number commencing during the year and in other cases it is the number in existence during the year, including those carried over from the previous year.

The figures published by some countries as to the number of workers involved show not

only the number of workers directly involved but also the number of those indirectly affected, that is thrown out of work by strikes and lockouts to which they were not parties, but exact information on this point is not always given. In the table given herewith the column showing the number of workers involved includes figures for the numbers directly involved or the total number directly and indirectly involved according to the method adopted by the country concerned. For these reasons the figures for strikes and lockouts for the various countries are not exactly comparable.

Footnotes to the tables indicate the nature of the statistics with reference to the above points.

Many countries publish statistics dealing with trade disputes only once each year or even less frequently, the figures being issued in some cases after an interval of some length. Most countries revise their figures when additional facts are brought to light, even though such revisions may necessitate changes in statistics published a considerable time previously.

In most cases the statistics dealing with disputes in other countries published in the LABOUR GAZETTE are obtained from official publications of the countries concerned.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1919-1945

Prices

Prices, Retail and Wholesale, in Canada, February, 1946

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THE cost-of-living index of the Dominion Bureau of Statistics remained unchanged between January 2 and February 1, 1946 at 119.9. Foods moved 0.3 points lower to 132.5 due to seasonal weakness in certain items, notably eggs and citrus fruits. Fresh vegetables were slightly firmer. A gain of 0.6 to 120.1 in homefurnishings and services reflected a sharp increase in the price of kitchen brooms, while the clothing series advanced 0.1 to 122.7. Other groups were unchanged as follows: rentals at 112.3, fuel and light at 107.1 and miscellaneous items at 110.9.

On the base August, 1939=100, bi-monthly cost-of-living indexes for eight regional cities were mainly unchanged to lower between December, 1945 and February, 1946. Winnipeg moved against the trend, an index for this city gaining 0.1 to 117.1. Seasonal changes in foods were responsible for lower indexes at other centres. Cost-of-living indexes for

Vancouver at 118.2 and Edmonton at 117.1 were each down 0.5 points, while a decline of 0.4 to 122.2 occurred for the Montreal series, and 0.3 to 119.3 for Halifax. Declines of 0.1 were recorded for two centres, Toronto series falling to 118.0 and the Saskatoon index to 120.6. Saint John continued unchanged at 119.7.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada at the date under review.

The prices of the staple food items included in the table are all used in the calculation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as

(Continued on page 404)

(a) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.
